^{*} Dari semasa ke semasa, universiti mungkin melakukan perubahan kepada beberapa aspek kurikulum dan sistem akademik tertentu bagi memenuhi keperluan semasa. Semua pelajar akan dimaklumkan dan tertakluk kepada perubahan tersebut.

^{*} From time to time, the university may amend certain aspects of curriculum and academic system in order to fulfil current needs and requirements. All students shall be informed of and are subject to the change.

Pengenalan/Introduction

Buku Panduan Program Ijazah Sarjana Muda ini disediakan untuk membantu pelajar baru dalam memahami proses dan prosedur yang berkaitan dengan pengajian mereka di UniMAP. Pelajar perlu menggunakan buku ini sebagai panduan utama dalam merancang dan membuat keputusan mengenai kursus yang akan diambil dari semester pertama sehingga semester akhir pengajian. Buku panduan ini juga memberikan beberapa maklumat asas mengenai sistem akademik, struktur program, senarai kursus yang ditawarkan bersama-sama dengan sinopsis, sumber rujukan, senarai kakitangan dan maklumat berkaitan yang lain. Diharapkan pelajar akan mendapat manfaat daripada maklumat yang diberikan dalam buku panduan untuk merancang pengajian mereka di UniMAP.

The Academic Guidebook for Bachelor Degree Programme is prepared to assist new UniMAP students in understanding processes and procedures that are related to their study in UniMAP. Students should use this book as their major guide in planning and deciding on courses to be taken from their first until final semester of their studies. This guidebook also gives some basic information on the academic system, program structures, list of courses offered together with the synopsis, references, list of staff and other related information. It is hoped that students will benefit from the information given in this guidebook and use the information to plan their studies in UniMAP.

Senarai Pusat Pengajian/List of Schools:

- 1. Pusat Pengajian Kejuruteraan Mikrolektronik/School of Microelectronic Engineering
- 2. Pusat Pengajian Kejuruteraan Komputer & Perhubungan/School of Computer & Communication Engineering
- 3. Pusat Pengajian Kejuruteraan Mekatronik/School of Mechatronic Engineering
- 4. Pusat Pengajian Kejuruteraan Sistem Elektrik/School of Electrical Systems Engineering
- 5. Pusat Pengajian Kejuruteraan Pembuatan/School of Manufacturing Engineering
- 6. Pusat Pengajian Kejuruteraan Bahan/School of Materials Engineering
- 7. Pusat Pengajian Kejuruteraan Bioproses/School of Bioprocess Engineering
- 8. Pusat Pengajian Kejuruteraan Alam Sekitar/School of Environmental Engineering
- 9. Pusat Pengajian Inovasi Perniagaan & Teknousahawan/School of Business Innovation and Technopreneurship
- 10. Pusat Pengajian Pembangunan Insan dan Teknokomunikasi/ School of Human Development and TechnoCommunication (iKOM)
- 11. Fakulti Teknologi Kejuruteraan/Faculty of Engineering Technology

Pusat-Pusat Pemantapan Akademik/Academic Support Centres:

- 1. Institut Matematik Kejuruteraan/Institute of Engineering Mathematics (IMK)
- 2. Pusat Kejuruteraan/Engineering Centre
- 3. Pusat Bahasa Antarabangsa/Centre for International Languages
- 4. Pusat Ko-kurikulum/ Centre for Co-Curriculum
- 5. Pusat Kerjasama Industri/Centre for Industrial and Governmental Collaboration (CIGC)

Senarai Program Pengajian Sarjana Muda/List of Degree Programmes:

- Sarjana Muda Kejuruteraan (Kepujian) (Kejuruteraan Mikroelektronik)/ Bachelor of Engineering (Honours) (Microelectronic Engineering)
- 2. Sarjana Muda Kejuruteraan (Kepujian) (Kejuruteraan Elektronik)/ Bachelor of Engineering (Honours) (Electronic Engineering)
- 3. Sarjana Muda Kejuruteraan (Kepujian) (Kejuruteraan Fotonik)/ Bachelor of Engineering (Honours) (Photonic Engineering)
- 4. Sarjana Muda Kejuruteraan (Kepujian) (Kejuruteraan Komputer)/ Bachelor of Engineering (Honours) (Computer Engineering)
- 5. Sarjana Muda Kejuruteraan (Kepujian) (Kejuruteraan Perhubungan)/ Bachelor of Engineering (Honours) (Communication Engineering)
- 6. Sarjana Muda Kejuruteraan (Kepujian) (Kejuruteraan Rangkaian Komputer)/
 Bachelor of Engineering (Honours) (Computer Network Engineering)
- 7. Sarjana Muda Kejuruteraan (Kepujian) (Kejuruteraan Mekatronik)/
 Bachelor of Engineering (Honours) (Mechatronic Engineering)
- 8. Sarjana Muda Kejuruteraan (Kepujian) (Kejuruteraan Mekanikal)/ Bachelor of Engineering (Honours) (Mechanical Engineering)
- 9. Sarjana Muda Kejuruteraan (Kepujian) (Kejuruteraan Elektronik Bioperubatan)/ Bachelor of Engineering (Honours) (Biomedical Electronic Engineering)
- 10. Sarjana Muda Kejuruteraan (Kepujian) (Kejuruteraan Sistem Elektrik)/
 Bachelor of Engineering (Honours) (Electrical System Engineering)
- 11. Sarjana Muda Kejuruteraan (Kepujian) (Kejuruteraan Elektronik Industri)/ Bachelor of Engineering (Honours) (Industrial Electronic Engineering)
- 12. Sarjana Muda Kejuruteraan (Kepujian) (Kejuruteraan Elektrik Sistem Tenaga)/ Bachelor of Engineering (Honours) (Electrical Power System)
- 13. Sarjana Muda Kejuruteraan (Kepujian) (Kejuruteraan Pembuatan)/
 Bachelor of Engineering (Honours) (Manufacturing Engineering)
- 14. Sarjana Muda Kejuruteraan (Kepujian) (Kejuruteraan Rekabentuk Produk)/
 Bachelor of Engineering (Honours) (Product Design Engineering)
- 15. Sarjana Muda Kejuruteraan (Kepujian) (Kejuruteraan Bahan)/ Bachelor of Engineering (Honours) (Material Engineering)
- 16. Sarjana Muda Kejuruteraan (Kepujian) (Kejuruteraan Metalurgi)/ Bachelor of Engineering (Honours) (Metallurgical Engineering)
- 17. Sarjana Muda Kejuruteraan (Kepujian) (Kejuruteraan Polimer)/ Bachelor of Engineering (Honours) (Polymer Engineering)
- 18. Sarjana Muda Kejuruteraan (Kepujian) (Kejuruteraan Bioproses)/ Bachelor of Engineering (Honours) (Bioprocess Engineering)
- 19. Sarjana Muda Kejuruteraan (Kepujian) (Kejuruteraan Biosistem)/ Bachelor of Engineering (Honours) (Biosystems Engineering)

- 20. Sarjana Muda Kejuruteraan (Kepujian) (Kejuruteraan Alam Sekitar)/ Bachelor of Engineering (Honours) (Environmental Engineering)
- 21. Sarjana Muda Kejuruteraan (Kepujian) (Kejuruteraan Awam)/
 Bachelor of Engineering (Honours) (Civil Engineering)
- 22. Sarjana Muda Perniagaan (Kepujian) (Keusahawanan Kejuruteraan)/
 Bachelor of Business (Honours) (Entrepreneurial Engineering)
- 23. Sarjana Muda Perniagaan (Kepujian) (Perniagaan Antarabangsa)/
 Bachelor of Business (Honours) (International Business)
- 24. Sarjana Muda Teknologi Kejuruteraan Kimia (Kepujian) (Bioteknologi Industri)/
 Bachelor of Chemical Engineering Technology (Honours) (Biotechnology Industry)
- 25. Sarjana Muda Teknologi Kejuruteraan Elektronik (Kepujian) (Rekabentuk Rangkaian Elektronik)/
 Bachelor of Electronic Engineering Technology (Honours) (Electronic Network Design)
- 26. Sarjana Muda Teknologi Kejuruteraan Elektrik (Kepujian) (Kuasa Industri)/
 Bachelor of Electrical Engineering Technology (Honours) (Industrial Power)
- 27. Sarjana Muda Teknologi Kejuruteraan Mekanikal (Kepujian) (Pemesinan)/
 Bachelor of Mechanical Engineering Technology (Honours) (Machining)
- 28. Sarjana Muda Teknologi Kejuruteraan Mekanikal (Kepujian) (Sistem Pertanian)/ Bachelor of Mechanical Engineering Technology (Honours) (Agricultural Systems)
- 29. Sarjana Muda Teknologi Kejuruteraan Awam (Kepujian) (Pembinaan)/
 Bachelor of Civil Engineering Technology (Honours) (Construction)
- 30. Sarjana Muda Teknologi Kejuruteraan Mekanikal (Kepujian) (Pembangunan Produk)/
 Bachelor of Mechanical Engineering Technology (Honours) (Product Development)
- 31. Sarjana Muda Teknologi Kejuruteraan Mekanikal (Kepujian) (Pemprosesan Bahan)/ Bachelor of Mechanical Engineering Technology (Honours) (Materials Processina)
- 32. Sarjana Muda Teknologi Kejuruteraan Elektrik (Kepujian) (Teknologi Robotik dan Automasi)/
 Bachelor of Electrical Engineering Technology (Honours) (Robotic and Automation Technology)
- 33. Sarjana Muda Teknologi Kejuruteraan Elektronik (Kepujian) (Sistem Elektronik)/ Bachelor of Electronic Engineering Technology (Honours) (Electronic Systems)
- 34. Sarjana Muda Teknologi Kejuruteraan Elektronik (Kepujian) (Elektronik Bersepadu)/
 Bachelor of Electronic Engineering Technology (Honours) (Integrated Electronics)
- 35. Sarjana Muda Teknologi Kejuruteraan Elektronik (Kepujian) (Rekabentuk Telekomunikasi Elektronik)/
 Bachelor of Electronic Engineering Technology (Honours) (Electronic Telecommunication Design)
- 36. Sarjana Muda Teknologi Kejuruteraan Kimia (Kepujian) (Proses Kimia Industri)/
 Bachelor of Chemical Engineering Technology (Honours) (Industrial Chemical Process)
- Bachelor of Chemical Engineering Technology (Honours) (Industrial Chemical Process, 37. Sarjana Muda Teknologi Kejuruteraan Kimia (Kepujian) (Agromakanan)/
- Bachelor of Chemical Engineering Technology (Honours) (Agrofood)

 38. Sarjana Muda Teknologi Kejuruteraan Mekanikal (Kepujian) (Teknologi Sukan)/
 Bachelor of Mechanical Engineering Technology (Honours) (Sport Technology)
- 39. Sarjana Muda Teknologi Kejuruteraan Awam (Kepujian) (Bangunan)/
 Bachelor of Engineering Technology in Civil Engineering (Honours) (Building)
- 40. Sarjana Muda Komunikasi Media Baharu (Kepujian)/ Bachelor of New Media Communication (Honours)

Misi/Mission:

Melahirkan Modal insan kamil yang menyumbang kepada agenda pembangunan dan daya saing industri negara. To produce holistic human capital that contributes to the nation's development and industrial competitiveness agenda.

Visi/Vision:

Institusi akademik dan penyelidikan yang berdaya saing di persada antarabangsa. *An internationally competitive academic and research institution.*

Lagu UniMAP/UniMAP Anthem:

WAWASANKU

Kata Aluan Naib Canselor

Bismillahirahmanirrahim

Assalamualaikum Warahmatullahi Wabarakatuh dan Salam Sejahtera.

Salam Ilmu, Keikhlasan, Kecemerlangan UniMAP,

Bersyukur ke hadrat Ilahi kerana dengan limpah kurniaNya Buku Panduan Pelajar UniMAP bagi Sidang Akademik 2014/2015 dapat dihasilkan.

Setinggi-tinggi tahniah dan syabas diucapkan kepada nadi penggerak yang telah bersungguh-sungguh menerbitkan Buku Panduan ini, yang merupakan sumber informasi bagi anak-anak sekalian untuk lebih mengenali, program-program dan kemudahan yang ditawarkan di UniMAP.

Di kesempatan ini, ingin saya mengucapkan sekalung tahniah kepada anak-anak pelajar yang telah berjaya menempatkan diri di UniMAP. Anda merupakan pelajar yang bertuah kerana terpilih untuk menyertai UniMAP yang merupakan sebuah IPTA yang berwawasan besar.

Justeru saya mengalu-alukan anak-anak pelajar untuk bersama mengharungi cabaran kearah merealisasikan wawasan tersebut. Adalah menjadi harapan UniMAP untuk melahirkan mahasiswa yang versatil, berkualiti tinggi dan berdaya saing daripada pelbagai disiplin ilmu. Justeru, penglibatan aktif anak-anak dalam pelbagai aktiviti yang dianjurkan samada akademik atau non-akademik amatlah digalakkan.

Sebagai sebuah universiti yang dinamik, sumbangan UniMAP tidak hanya berfokus kepada pembangunan pelajar dan staf semata-mata, malah sebagai sebuah gedung ilmu, UniMAP sentiasa proaktif membantu masyarakat dengan berkongsi ilmu-ilmu terkini untuk pembangunan agama, bangsa dan negara.

Sehubungan dengan itu, besarlah harapan saya agar para siswazah baru ini dapat seiringan dengan pembangunan universiti dalam membawa universiti ke arena antarabangsa tidak kira dalam bidang akademik mahupun penyelidikan.

Sebagai penghias bicara akhir, jagalah amanah dan tanggungjawab yang telah diberikan oleh kedua ibu bapa anak-anak pelajar dalam menuntut ilmu demi kepentingan diri, masyarakat, agama, bangsa dan Negara dan sebagai persediaan menjadi pewaris pembangunan negara.

Sekian, Wassalam.

Vice Chancellor's Message

Bismillahirrahmanirrahim

Assalamualaikum Warahmatullahi Wabarakatuh and Salam Sejahtera.

Salam Ilmu, Keikhlasan, Kecemerlangan UniMAP,

All Praise to the Almighty for it is with His Blessings that we have been able to produce the UniMAP Academic Guide Book for the 2014/2015 Academic Session. Thank you to the team that has worked hard to ensure that this book comes to fruition.

Please allow me to congratulate all new UniMAP students. It is our privilege to have you with us, and we hope that together, we will work towards your successes, and ours, as a university with high aspirations and ambitions. We invite all students to come on board with us, to make those aspirations and ambitions a reality. It is the hope of the university that during the time that you are with us, we will be able to harness your potential - to be versatile, of great quality, and to be fiercely competitive, across various disciplines.

Your involvement in both academic and non-academic activities will be very important. To help you find your way around the programmes UniMAP offers and facilities available at the university, we offer you this guide book, which shall serve as a very important source of reference. Use it, look it up, keep it with you – you will find all that you need to know about your programme here.

UniMAP takes its role on students' and staff development very seriously. In addition, as a dynamic university, UniMAP is also proactive in ensuring that the community surrounding the university benefits from our presence. It is thus my fervent hope that together we will contribute towards these aspects of development, taking the university to the international platform, in both academic and research realms.

As future leaders, I ask that in your quest for knowledge, you honour the responsibility that your parents have entrusted to you, for your own good and that of the society and the nation.

Thank you, Wassalam.

Sistem Akademik

Kurikulum program pengajian Sarjana Muda Kejuruteraan dan Sarjana Muda Teknologi Kejuruteraan dirangka untuk dilengkapkan dalam tempoh 4 tahun manakala bagi program pengajian Sarjana Muda Perniagaan dan Sariana Muda Komunikasi Media Baharu pula dalam tempoh 3 tahun, dengan setiap Tahun Akademik atau Sidang Akademik dibahagikan kepada Semester I dan Semester II. Setiap semester mengandungi 14 minggu pembelajaran. Peperiksaan akan diadakan pada hujung semester. Kursus-kursus yang ditawarkan dibahagikan mengikut peringkat pengajian iaitu peringkat 100, 200, 300 dan 400.

Bagi tujuan pengijazahan, pelajar Sarjana Muda Kejuruteraan perlu mengambil kursus-kursus Teras berjumlah 120 unit, pelajar Sarjana Muda Teknologi Kejuruteraan pula perlu mengambil kursus-kursus Teras berjumlah 123 unit, pelajar Sarjana Muda Perniagaan perlu mengambil 72 atau 74 unit Kursus Teras (mengikut pengkhususan yang diambil) dan 30 unit Kursus Elektif manakala pelajar Sarjana Muda Komunikasi Media Baharu pula perlu mengambil 87 unit kursus Teras dan 15 unit Kursus Elektif.

Pelajar juga perlu mengambil kursus Keperluan Universiti sebanyak 17 unit bagi program Sarjana Muda Kejuruteraan, 19 unit bagi program Sarjana Muda Teknologi Kejuruteraan, 20 unit bagi program Sarjana Muda Perniagaan dan Sarjana Muda Komunikasi Media Baharu pula perlu mengambil 18 unit kursus Keperluan Universiti.

Pelajar juga perlu lulus semua kursus dan mendapat jumlah kredit yang diperlukan mengikut program pengajian masing-masing serta PNGK sekurang-kurangnya 2.00 untuk bergraduat.

Struktur Program

Struktur program Sarjana Muda Kejuruteraan, Sarjana Muda Kejuruteraan Teknologi Kejuruteraan, Sarjana Muda Perniagaan dan Sarjana Muda Komunikasi Media Baharu dikelompokkan seperti yang ditunjukkan dalam Jadual 1 (a), (b), (c), (d) dan (e). Bagi tujuan pengijazahan, pelajar dikehendaki untuk mengambil sejumlah 137 unit bagi program Sarjana Muda Kejuruteraan, 142 unit bagi program Sarjana Muda Teknologi Kejuruteraan, 122 unit atau 124 unit bergantung kepada pengkhususan program Sarjana Muda Perniagaan dan 120 unit bagi program Sarjana Muda Komunikasi Media Baharu.

Jenis-Jenis Kursus

1. Kursus Keperluan Universiti

Kursus Keperluan Universiti ialah kursus-kursus di luar pengkhususan pelajar. Kursus-kursus ini ditawarkan oleh Pusat Pengajian Pembangunan Insan dan Teknokomunikasi (iKOM), Pusat Bahasa Antarabangsa dan Pusat Kokurikulum. Semua kursus ini wajib diambil dan pelajar perlu lulus dengan gred C sebagai syarat utama untuk pengijazahan. Kursus-kursus tersebut ialah:

a. Keusahawanan Kejuruteraan (2 unit)

Semua pelajar wajib mengambil kursus Keusahawanan Kejuruteraan. Pelajar digalakkan mengambil kursus-kursus lain dalam kategori 'keusahawanan', di mana unit yang dikumpul boleh dikira sebagai Kursus Opsyen.

b. Hubungan Etnik (2 unit)

Semua pelajar wajib mengambil kursus Hubungan Etnik.

c. Tamadun Islam & Tamadun Asia (2 unit)

Kursus Tamadun Islam & Tamadun Asia wajib diambil oleh semua pelajar.

d. Bahasa Melayu Universiti (2 unit)

Kursus Bahasa Melayu Universiti wajib diambil oleh semua pelajar.

e. Bahasa Inggeris Untuk Komunikasi Teknikal/ Bahasa Inggeris Akademik (2 unit)

Semua pelajar wajib mengambil kursus Bahasa Inggeris untuk Komunikasi Teknikal (bagi program Sarjana Muda Kejuruteraan dan Sarjana Muda Teknologi Kejuruteraan) atau kursus Bahasa Inggeris Akademik (bagi Program Sarjana Muda Perniagaan dan Sarjana Muda Komunikasi Media Baharu). Pelajar yang memperolehi band 1, 2 dan 3 dalam MUET dikehendaki mengambil Bahasa Inggeris Asas dan lulus gred C sebelum dibenarkan mengambil Bahasa Inggeris untuk Komunikasi Teknikal atau Bahasa Inggeris Akademik. Dua (2) unit tambahan kursus Bahasa Inggeris Asas ini boleh dikira sebagai Kursus Opsuen. Pelajar yang memperolehi band 4 dan 5 dalam MUET, boleh mengambil 2 unit tambahan kursus Bahasa Inggeris Asas dan dikira sebagai kursus opsyen.

f. Kemahiran Berfikir (2 unit)

Semua wajib mengambil kursus Kemahiran Berfikir.

g. Kemahiran dan Teknologi Dalam Komunikasi (2 unit)

Kursus Kemahiran dan Teknologi dalam Komunikasi wajib diambil oleh pelajar Sarjana Muda Teknologi Kejuruteraan dan Sarjana Muda Perniagaan.

h. Komunikasi Dalam Perniagaan (3 unit)

Kursus Komunikasi dalam Perniagaan wajib diambil oleh semua pelajar program Sarjana Muda Perniagaan.

i. Program Ko-Kurikulum (3 unit)

Semua pelajar diwajibkan mengumpul **3** unit ko-kurikulum sepanjang pengajiannya di UniMAP. Dua (2) unit Badan Beruniform perlu diambil oleh pelajar secara berpakej iaitu 1 unit pada Semester I dan 1 unit lagi pada Semester II (dalam Tahun Pertama pengajian). Bagi kursus bukan Badan Beruniform, sebanyak 1 unit boleh diambil dalam mana-mana semester.

2. Kursus Teras (Sarjana Muda Kejuruteraan)

Kursus Teras terdiri daripada kursus-kursus Kejuruteraan yang wajib diambil oleh semua pelajar bidang Sarjana Muda Kejuruteraan. Kursus-kursus ini menjadi sebahagian keperluan untuk pengijazahan. Pelajar yang gagal mana-mana kursus Teras Kejuruteraan mesti mengulanginya dan lulus sebelum layak dipertimbangkan untuk pengijazahan.

3. Kursus Teras (Sarjana Muda Teknologi Kejuruteraan)

Kursus Teras terdiri daripada kursus-kursus Teknologi Kejuruteraan yang wajib diambil oleh semua pelajar bidang Teknologi Kejuruteraan. Kursus-kursus ini menjadi sebahagian keperluan untuk pengijazahan. Pelajar yang gagal manamana kursus Teras Teknologi Kejuruteraan mesti mengulanginya sebelum layak dipertimbangkan untuk pengijazahan

4. Kursus Teras (Sarjana Muda Perniagaan)

Kursus Teras bagi Program Sarjana Muda Perniagaan UniMAP dibahagikan kepada dua kumpulan iaitu Kursus Teras Perniagaan dan Kursus Teras Program.

Kursus Teras Perniagaan terdiri daripada kursuskursus kontemporari dalam bidang perniagaan yang wajib diambil oleh semua pelajar program Sarjana Muda Perniagaan di UniMAP manakala Kursus Teras Program ditawarkan mengikut pengkhususan yang dipilih oleh pelajar.

Kursus-kursus Teras ini menjadi sebahagian keperluan untuk pengijazahan. Pelajar yang gagal mana-mana Kursus Teras mesti mengulanginya sebelum layak dipertimbangkan untuk pengijazahan.

5. Kursus Elektif (Sarjana Muda Perniagaan)

Pelajar Sarjana Muda Perniagaan boleh memilih kursus Elektif berdasarkan minat mereka dalam bidang-bidang tertentu.

6. Kursus Opsyen

Kursus Opsyen merupakan mana-mana kursus yang ditawarkan oleh Pusat Pengajian Pembangunan Insan dan Teknokomunikasi (iKOM) dan Pusat Bahasa Antarabangsa untuk pelajar program Program Sarjana Muda Kejuruteraan dan Sarjana Muda Teknologi Kejuruteraan. Sebanyak 2 unit Kursus Opsyen perlu diambil oleh pelajar program Sarjana Muda Kejuruteraan dan Sarjana Muda Teknologi Kejuruteraan sepanjang pengajian mereka di UniMAP.

7. Kursus Pra-Syarat

Pra-syarat merupakan kursus yang wajib diambil dan lulus oleh pelajar, sebelum mendaftar kursus yang berikutnya. Kursus yang berikutnya itu dikenakan pra-syarat ke atasnya seperti yang ditentukan dalam struktur akademik program Ijazah Sarjana Muda. Untuk mendaftar kursus berikutan yang mempunyai pra-syarat, pelajar perlu terlebih dahulu lulus kursus pra-syarat tersebut. Pelajar yang gagal dalam kursus pra-syarat boleh mengambil semula kursus pra-syarat tersebut seiring dengan kursus yang berikutnya (dalam semester sama), namun hendaklah memohon dan mendapatkan kelulusan Dekan Pusat Pengajian. Perkara ini walau bagaimanapun, tidak terpakai bagi kursus-kursus bahasa.

Sistem Unit

Setiap kursus diberikan nilai yang dikenali sebagai **UNIT**. Unit diberikan berdasarkan skop dan kedalaman kursus berkenaan. Kecuali dalam kes-kes tertentu, nilai unit bagi kursus yang mempunyai unit adalah seperti **Jadual 2**:

Jadual 2 : Penilaian Unit bagi setiap minggu untuk Semester 14 Minggu

| Bentuk Pertemuan | Nilai | Jumlah Pertemuan |
|---|-------|--|
| R P. L | Unit | Setiap Minggu |
| Kuliah | 1 | 1 jam |
| Makmal/Tutorial | 1 | 2 jam |
| Projek Tahun Akhir | 1 | 3 jam |
| Pembelajaran berbantu melibatkan mod penyampaian lain seperti Problem- based Learning (PBL), pembelajaran-e (e-learning modules), lawatan kerja dll. | 1 | 3 jam |
| Latihan Industri | 1* | Bergantung kepada program pengajian |

^{*}Nota: Nilai 1 unit bagi Latihan Industri adalah setara dengan 2 minggu latihan

Pendekatan Pengajaran Dan Pembelajaran Di UniMAP

Kebanyakan Kursus Teras yang ditawarkan merangkumi komponen teori dan komponen praktikal dengan nilaian jam pertemuan seperti berikut:

1. Komponen Teori

Satu (1) unit komponen Teori adalah bersamaan dengan 1 jam kuliah/tutorial/bacaan seminggu atau 14 jam dalam satu semester.

2. Komponen Praktikal

Satu (1) unit komponen Praktikal bagi program Kejuruteraan adalah bersamaan 2 jam pertemuan dalam seminggu atau 28 jam pertemuan dalam 1 semester.

Satu (1) unit komponen Praktikal bagi program Teknologi Kejuruteraan adalah bersamaan 3 jam pertemuan dalam seminggu atau 42 jam pertemuan dalam 1 semester.

Bagi kebanyakan Kursus Teras, pelajar perlu menjalani projek mini dan menduduki peperiksaan atau viva pada penghujung semester.

Komponen praktikal terdiri daripada bentuk-bentuk pengajaran dan pembelajaran berikut:

- 1. Pembelajaran di dalam makmal sepasukan pelajar yang terdiri dari 2-3 orang, menjalankan satu eksperimen. Di dalam beberapa program makmal asas, setiap pelajar menjalankan eksperimen secara individu (1:1) dan bukannya dalam pasukan.
- 2. Pembelajaran menggunakan Teaching Factory
 sepasukan pelajar yang terdiri dari 5-6 orang
 menjalankan sesebuah larian proses (process run)
 dengan menggunakan peralatan skala sebenar
 yang digunakan di industri.

- 3. E-pembelajaran pendekatan pembelajaran yang diperkukuhkan dengan ICT, yang melengkapkan pendekatan pembelajaran konvensional. Pelajar mempelajari kursus atau topik-topik tertentu menggunakan modul yang boleh diakses dari laman web UniMAP. Modul mengandungi nota kuliah dalam bentuk multimedia, yang merangkumi audio, video, grafik, animasi, simulasi, permainan, dan pelbagai lagi aktiviti berbentuk interaksi.
- 4. Pendedahan kepada industri pelajar menjalankan lawatan ke industri selama tempoh masa tertentu beberapa kali sepanjang pengajiannya di UniMAP. Ini termasuklah program IndEx (Pendedahan kepada Industri), InTra (Latihan Industri), Keusahawanan Industri, dan lain-lain lagi.

Latihan Industri

Latihan Industri merupakan kursus 4 unit bagi pelajar Sarjana Muda Kejuruteraan, 12 unit bagi pelajar Sarjana Muda Teknologi Kejuruteraan, 6 unit bagi pelajar Sarjana Muda Perniagaan dan 6 unit bagi pelajar Sarjana Muda Komunikasi Media Baharu

Pelajar Sarjana Muda Kejuruteraan Tahun 3 dikehendaki untuk menjalani 12 minggu Latihan Industri untuk mendapatkan 4 kredit, pelajar Sarjana Muda Teknologi Kejuruteraan Tahun 4 pula dikehendaki untuk menjalani 12 minggu Latihan Industri untuk mendapatkan 12 kredit manakala pelajar Tahun 3 program Sarjana Muda Komunikasi Media Baharu pula dikehendaki menjalani 12 minggu Latihan Industri untuk mendapatkan 6 kredit untuk kursus ini.

Pelajar program Sarjana Muda Perniagaan (Perniagaan Antarabangsa) pula akan mengikuti Latihan Industri pada Semester ke-2 dan ke-4, mengikut Pilihan Pertama iaitu (2+2) atau Pilihan Kedua (3+1). Bagi Pilihan Pertama

(2+2), pelajar akan mengikuti 2 fasa (2 bulan + 2 bulan) Latihan Industri di syarikat-syarikat multinasional di Malaysia dan bagi Pilihan Kedua (3+1), pelajar akan menjalani Latihan Industri di syarikat multinasional di Malaysia dan lawatan sambil belajar di luar negara (International Business Field Trips).

Pelajar program Sarjana Muda Perniagaan (Keusahawanan Kejuruteraan) akan mengambil bahagian dalam program Perniagaan Inkubator selama 12 minggu. Mereka akan mendapat 6 jam kredit selepas Semester ke-4.

Purata pertemuan selama 8 jam sehari selama 5 hari dalam seminggu, di mana 8 jam sehari x 5 hari = 40 jam seminggu, dianggap sebagai jam penilaian (waktu bekerja yang ditetapkan oleh organisasi/ syarikat).

Tujuan utama Latihan Industri ialah:-

- Menyemai sikap profesional dalam kalangan pelajar.
- Menyedarkan pelajar tentang kepentingan dan kaitan yang kuat antara latihan industri, makmal/ amali dan teori kejuruteraan.
- Memberi pendedahan awal kepada pelajar tentang persekitaran dan keadaan di industri serta amalannya. Para pelajar berpeluang melengkapkan diri sebagai bekalan untuk menghadapi pengalaman akan datang, baik di dalam pengajian akademik mahupun latihan-latihan seterusnya.

Pusat Kerjasama Industri dan Agensi Kerajaan (CIGC) akan menyelaraskan bersama pusat-pusat lain kursus-kursus yang melibatkan industri seperti di bawah:

1. Pendedahan Industri (IndEx)

a. Skim singkat 1 hari

- Pakar-pakar, pengurus dan jurutera-jurutera dari industri dijemput untuk mengadakan taklimat, demonstrasi dan dialog mengikut jadual yang disediakan
- c. Melibatkan lawatan ke industri
- d. Pendedahan ini adalah bagi pelajar-pelajar yang telah menyempurnakan pengajian Tahun 1
- 2. Pendedahan Keusahawanan Industri (IndEnt)
 - a. Program singkat 1 hari
 - Penyertaan sektor Industri Kecil, firma R&D dan badan-badan kerajaan seperti Kementerian Pembangunan Usahawan dan Koperasi.
 - c. Berbentuk taklimat, dialog, dan demonstrasi
 - d. Melibatkan pelajar-pelajar Tahun 2

Program Inkubator Perniagaan

Pendekatan Pengajaran dan Pembelajaran untuk program Sarjana Muda (Keusahawanan Kejuruteraan) bukan sahaja meliputi kuliah dan tutorial tetapi juga Latihan Praktikal melalui Program Inkubator Perniagaan. Selepas semester ke-4, pelajar akan mengambil bahagian dalam Program Perniagaan Inkubator selama 12 minggu. Mereka akan mendapat 6 jam kredit.

Pelajar dibimbing oleh syarikat-syarikat dalam Inkubator Perniagaan. Ini akan memberi mereka peluang untuk menjadi sebahagian daripada pasukan yang terlibat dalam pembangunan produk yang mungkin membawa kepada pengkomersilan. Mereka dapat mengetahui bagaimana idea dan inovasi boleh membawa kepada penghasilan produk untuk pengguna. Di samping itu, mereka juga akan melihat sendiri aliran proses perniagaan.

Pada akhir Program Inkubator Perniagaan, pelajar dikehendaki menyediakan satu laporan mengenai pengalaman mereka sepanjang Program Inkubator Perniagaan yang telah mereka jalani dalam syarikat-syarikat terpilih.

Inkubator perniagaan Malaysia telah membentuk satu kumpulan yang rapat di bawah National Incubator Network Association (NINA) dan bergabung dengan Association of Asean Business Incubation (AABI). Antara ahli-ahli pertubuhan ini termasuklah Technology Park Malaysia, Perbadanan Pembangunan Teknologi Malaysia, SIRIM dan Kulim Technology Park Corporation. UniMAP bekerjasama rapat dengan pertubuhan-pertubuhan ini untuk menjamin kejayaan program tersebut.

Program Lawatan Kerja Untuk Perniagaan Antarabangsa (International Business Field Trips)

Pada semester ke-2 dan ke-4, pelajar Sarjana Muda (Perniagaan Antarabangsa) pula akan mengikuti Latihan Industri mengikut Pilihan Pertama (2+2) atau Pilihan Kedua (3+1).

Bagi Pilihan Pertama, iaitu Pilihan 2+2, pelajar akan mengikuti 2 fasa (2 bulan + 2 bulan) Latihan Industri di syarikat-syarikat multinasional di Malaysia dan penyelarasannya dilaksanakan dengan kerjasama Pusat Kerjasama Industri dan Agensi Kerajaan (CIGC) UniMAP.

Bagi Pilihan Kedua (3 +1), pelajar akan menjalani Latihan Industri di syarikat-syarikat multinasional yang terpilih di Malaysia untuk 3 bulan pertama dan kemudian meneruskan lawatan sambil belajar di luar negara selama 1 bulan lagi. Pelajar diberi kebebasan untuk

memilih mana-mana dua pilihan yang diberikan untuk Latihan Industri mengikut minat dan kemampuan kewangan mereka.

Kod Kursus

Setiap kursus yang ditawarkan mempunyai kod yang tersendiri. Untuk pengajian program Kejuruteraan, Teknologi Kejuruteraan, Perniagaan dan Komunikasi Media Baharu, kod bagi sesebuah kursus diringkaskan dalam **Jadual 3(a), 3(b) dan 3(c)** di bawah:

Jadual 3(a): Abjad Pertama; Peringkat Pengajian /Jenis program yang ditawarkan di peringkat Sarjana Muda

| Abjad Pertama di dalam Kod | Jenis Program |
|-------------------------------|--|
| Е | Sarjana Muda Kejuruteraan |
| В | Sarjana Muda Perniagaan |
| Р | Sarjana Muda Teknologi Kejuruteraan |
| K | Sarjana Muda Komunikasi Media Baharu |
| U | Kursus Umum (Subjek ini boleh diambil oleh |
| | pelajar dari semua program pengajian) |

Jadual 3(b): Abjad Kedua; Pusat Pengajian yang Menawarkan Kursus

| Abjad Kedua di dalam Kod | Pusat Pengajian |
|-----------------------------|--|
| Е | PPK Sistem Elektrik |
| М | PPK Mikroelektronik |
| K | PPK Komputer & Perhubungan |
| N | PPK Mekatronik |
| В | PPK Bahan |
| Р | PPK Pembuatan |
| R | PPK Bioproses |
| Α | PPK Alam Sekitar |
| D | Pusat Pengajian Teknologi Kejuruteraan Mekanikal |
| G | Pusat Pengajian Teknologi Kejuruteraan Elektronik |
| L | Pusat Pengajian Teknologi Kejuruteraan Elektrik |
| S | Pusat Pengajian Teknologi Kejuruteraan Awam |

| Abjad Kedua di dalam Kod | Pusat Pengajian |
|-----------------------------|--|
| T | Pusat Pengajian Teknologi Kejuruteraan Kimia |
| С | Pusat Kejuruteraan |
| Q | Institut Matematik Kejuruteraan |
| 1 | Pusat Kerjasama Industri |
| F | Pusat Pengajian Inovasi Perniagaan & Teknousahawan |
| | |
| U | Pusat Pengajian Pembangunan Insan dan Teknokomunikasi |
| V | Pusat Bahasa Antarabangsa |
| Z | Pusat Ko-kurikulum |

Jadual 3(c): Abjad Ketiga; Kursus Teras atau Kursus Keperluan Universiti;

| Abjad Ketiga di dalam Kod | Jenis Kursus | | | |
|------------------------------|-----------------------------|--|--|--|
| Т | Kursus Teras/Elektif | | | |
| W | Kursus Keperluan Universiti | | | |

Tiga angka terakhir bagi sesebuah kod kursus mewakili perkara-perkara berikut iaitu angka pertama adalah tahap kursus (1 = subjek Tahun 1, 2 = subjek Tahun 2, dsb); angka kedua dan ketiga adalah nombor kursus. Kod bagi sesebuah kursus diringkaskan dalam **Jadual** 4 di bawah:

Jadual 4: Kod Kursus

| Α | В | С | 1 | 2 | 3 | 4 | ANGKA | DESKRIPSI |
|--------------|----------|---------------|---------------|---------------|---------------|---------------|------------------------|---|
| \downarrow | ↓ | ↓ | ↓ | ↓ | \downarrow | ↓ | ANGKA | DESKRIPSI |
| \downarrow | ↓ | ↓ | \downarrow | ↓ | \downarrow | \rightarrow | 4 | Unit/Kredit |
| 1 | 1 | 1 | 1 | 1 | L | \rightarrow | 3 | Kelompok Kursus. (Penentuan kelompok |
| 1 | ļ | 1 | ļ | L | \rightarrow | \rightarrow | 2 | kursus ditentukan oleh Pusat Pengajian masing-masing) |
| | I | | L | → | \rightarrow | → | 1 | Aras/ Tahap Kursus program Sarjana Muda: • 1=subjek Tahun 1, • 2= subjek Tahun 2, • 3= subjek Tahun 3, • 4= subjek Tahun 4, |
| 1 | ↓ | L | \rightarrow | \rightarrow | \rightarrow | \rightarrow | JENIS KURSUS | Sila rujuk Jadual 3(c) |
| 1 | L | \rightarrow | \rightarrow | \rightarrow | \rightarrow | \rightarrow | PUSAT PENGAJIAN | Sila rujuk Jadual 3(b) |
| L | → | \rightarrow | \rightarrow | \rightarrow | \rightarrow | \rightarrow | PERINGKAT PENGAJIAN | Sila rujuk Jadual 3(a) |

Pra-Pendaftaran Kursus

Pra-pendaftaran kursus adalah suatu sistem yang membolehkan pelajar membuat pra-pendaftaran "atas talian " untuk kursus-kursus di semester seterusnya pada tempoh masa yang lebih awal. Tempoh masa yang ditetapkan untuk pra-pendaftaran ini adalah sebelum bermula cuti semester pada semester semasa. Semua pelajar (Aktif/Percubaan/Berhutang) **DIWAJIBKAN** melakukan proses pra-pendaftaran ini.

Pelajar dinasihatkan mendaftar pada tarikh yang ditetapkan. Kursus yang perlu didaftarkan adalah kursus yang akan diambil pada semester akan datang (semua kursus termasuk Kokurikulum). Pelajar digalakkan berjumpa Rakan Pendamping Siswa (RPS) dan mengisi borang HEA-09a sebelum membuat proses Pra-pendaftaran tersebut. Pelajar yang gagal membuat proses Pra-pendaftaran dalam tempoh yang ditetapkan akan menyebabkan pendaftaran rasmi kursus bagi semester hadapan terjejas (tempat tertakluk kepada kekosongan). Pelajar tidak perlu mencetak slip pra-pendaftaran ini dan tidak perlu mendapatkan pengesahan daripada RPS.

Pendaftaran Kursus

Semua pelajar yang aktif adalah diwajibkan mendaftar kursus untuk setiap semester. Pendaftaran kursus ini dilakukan secara dalam talian (online) oleh semua pelajar. Pendaftaran kursus mesti dibuat mengikut tarikh yang telah ditetapkan seperti hebahan yang dikeluarkan oleh Unit Kemasukan dan Rekod Pelajar melalui emel dan portal.

Pelajar adalah diwajibkan untuk bertemu dan berbincang dengan Rakan Pendamping Siswa (RPS) berkaitan kursus-kursus yang perlu didaftar. Pelajar perlu membawa bersama slip pendaftaran kursus untuk disahkan oleh RPS dalam sistem pada sesi tersebut. Kursus-kursus yang didaftarkan tanpa mendapat pengesahan dari RPS adalah dianggap **tidak sah**. Sekiranya berlaku perubahan pada pendaftaran kursus sama ada pelajar menambah, menggugur atau tarik diri kursus dalam tempoh yang ditetapkan, pelajar perlu mendapatkan pengesahan semula daripada RPS.

Pelajar yang gagal mendaftar kursus dalam tempoh masa yang ditetapkan adalah tertakluk kepada penalti berjumlah RM50. Pendaftaran lewat tidak boleh melebihi minggu ketiga (3) semester. Pelajar perlu mengisi Borang HEA-09 (Borang Permohonan Kursus Lewat) dan mesti memperolehi kelulusan daripada Dekan Pusat Pengajian.

Manakala pelajar yang baru mendaftar bagi satu-satu sidang akademik baru akan mendaftar secara online pada tarikh yang dinyatakan pada Minggu Suaikenal mengikut Pusat Pengajian masing-masing. Pelajar akan diberi taklimat tentang kursus, dalam Minggu Suaikenal tersebut di Pusat Pengajian masing-masing.

Adalah menjadi tanggungjawab pelajar untuk menyemak dan memastikan bahawa semua butir-butir yang dinyatakan dalam Slip Pendaftaran Kursus adalah betul. Sebarang permohonan pendaftaran kursus/penambahan kursus/pengguguran kursus/tarik diri di luar tempoh yang ditetapkan tanpa sebab-sebab yang boleh diterima oleh Universiti, boleh dikenakan denda. Hanya pelajar yang mempunyai alasan yang tertentu sahaja akan dipertimbangkan oleh Dekan Pusat Pengajian. Pelajar tidak dibenarkan membuat pendaftaran kursus/penambahan kursus/pengguguran kursus/tarik diri kursus semasa minggu peperiksaan.

Pelajar yang tidak mendaftar kursus maksimum 2 semester berturut-turut tanpa sebarang alasan boleh ditamatkan pengajian dengan menggunakan Borang HEA-20 (Borang Penamatan Pengajian Pelajar).

Pelajar yang telah ditamatkan pengajian dan merayu untuk menyambung semula pengajian perlu menulis surat rayuan permohonan kemasukan kepada Naib Canselor melalui Dekan Pusat Pengajian (perakuan Dekan diperlukan). Penalti RM100 akan dikenakan kepada pelajar bagi setiap rayuan kemasukan semula uang diluluskan.

Pendaftaran Kursus Pelajar Berstatus Aktif

Pelajar berstatus Aktif boleh mendaftar kursus secara online tidak melebihi 22 unit dan tidak kurang daripada 10 unit kecuali pelajar yang mengikuti Latihan Industri dan pelajar Semester Akhir yang akan menamatkan pengajian. Pelajar yang ingin mendaftar melebihi 22 unit perlu mendapatkan kebenaran daripada RPS dengan kelulusan daripada Dekan Pusat Pengajian.

Keterangan mengenai Pendaftaran Kursus pelajar berstatus Aktif diringkaskan seperti di **Jadual 5** di bawah

Jadual 5: Ringkasan Pendaftaran Kursus Pelajar Berstatus Aktif

| Status Pelajar | Minimum | Maksimum |
|--|---------|----------|
| Pelajar Aktif | 10 | 22 |
| Pelajar Aktif yang mengambil kursus Latihan Indutri (LI) atau Projek Tahun Akhir (FYP) | 10 | 28 |

^{*} Pelajar yang tidak mengambil kursus LI atau FYP boleh mengambil kursus melebihi 22 unit dengan kelulusan Dekan Pusat Pengajian terlebih dahulu dan mengisi borang HEA-09a (Borang Pendaftaran Kursus).

2. Pendaftaran Kursus Pelajar Percubaan [P]

Pelajar dengan status Percubaan **tidak dibenarkan** untuk mendaftar sendiri secara dalam talian (online). Pelajar ini perlu bertemu dengan RPS mereka untuk mendapatkan pengesahan daripada Dekan dan perlu juga mengisi Borang HEA-09b [Borang Pendaftaran Kursus-Berstatus Percubaan (P)] sebelum menyerahkannya kepada Penolong

Pendaftar Pusat Pengajian untuk didaftarkan. Hanya Penolong Pendaftar Pusat Pengajian atau Jabatan Pendaftar sahaja yang boleh mendaftarkan kursus bagi pelajar ini. Jumlah unit yang dibenarkan untuk Pelajar Percubaan adalah seperti **Jadual 6** berikut:

Jadual 6: Ringkasan Pendaftaran Kursus Pelajar
Percubaan (P)

| Status Pelajar | Minimum | Maksimum |
|----------------|---------|----------|
| Percubaan (P1) | 10 | 12 |
| Percubaan (P2) | 8 | 10 |

Penambahan / Pengguguran / Tarik Diri Kursus

1. Tambah Kursus

- Tempoh yang dibenarkan untuk penambahan kursus adalah sehingga minggu ke-2 minggu pembelajaran
- b) Pelajar perlu mengisi Borang HEA-11 (Borang Tambah Kursus) dan menyerahkannya kepada Penolong Pendaftar Pusat Pengajian untuk dikemaskini dalam sistem

2. Gugur Kursus

- a) Tempoh yang dibenarkan untuk menggugurkan kursus adalah sehingga minggu ke-6 minggu pembelajaran.
- Pelajar perlu mengisi Borang HEA-10 (Borang Gugur Kursus). Borang perlu ditandatangani oleh pensyarah kursus, Dekan Pusat Pengajian dan diserahkan kepada Penolong Pendaftar Pusat Pengajian untuk dikemaskini dalam sistem.

- a) Pelajar dengan persetujuan Pensyarah Kursus dan Dekan Pusat Pengajian boleh memohon untuk menarik diri daripada kursus yang telah didaftarkan pada semester yang berkenaan tidak lewat dari hari akhir bekerja pada minggu ke-12 minggu pembelajaran.
- b) Kebenaran untuk pelajar menarik diri daripada mengikuti sesuatu kursus adalah tertakluk kepada jumlah unit minimum, kecuali dengan kebenaran Dekan.
- Status Tarik Diri (TD) akan dicatatkan dalam rekod pendaftaran kursus dan transkrip akademik pelajar. Walau bagaimanapun, gred tidak akan diambil kira dalam pengiraan PNG dan PNGK

Pertukaran Program Pengajian

Pertukaran program pengajian bermaksud pelajar menukar program pengajiannya kepada sesuatu program pengajian yang lain atas sebab-sebab tertentu yang dipersetujui oleh kedua-dua Dekan sekarang dan Dekan Pusat Pengajian yang dipohon.

Pertukaran program pengajian tidak digalakkan kerana ia melibatkan penukaran agihan sumber yang sudah dirancang dengan rapi pada awal sesuatu sidang akademik. Walau bagaimanapun, permohonan rayuan pertukaran program pengajian boleh dipertimbangkan dengan alasan-alasan yang kukuh sahaja dan tertakluk kepada syarat-syarat seperti berikut:

 Permohonan hanya boleh dibuat oleh pelajar setelah tamat sekurang-kurangnya satu semester pengajian. Pelajar perlu mengisi Borang Permohonan Pertukaran Program Pengajian (HEA-12) dengan lengkap. Borang permohonan boleh didapati di Jabatan Pendaftar atau di Pusat

Pengajian. Walau bagaimanapun, bagi kes-kes tertentu, permohonan pelajar untuk pertukaran program pengajian pada permulaan pengajian boleh dipertimbangkan dengan kelulusan Naib Canselor/Timbalan Naib Canselor (Akademik & Antarabangsa).

- Permohonan perlu dikemukakan dalam masa dua minggu pertama semester bermula. Borang permohonan mestilah disertakan dengan salinan keputusan peperiksaan semester yang terkini atau keputusan pada peringkat Matrikulasi/STPM/ Diploma.
- 3. Pelajar hanya boleh memohon bertukar program pengajian tidak melewati 2 Semester Pertama pengajian di UniMAP. Permohonan setelah masuk semester ketiga pengajian tidak akan dipertimbangkan.
- 4. Setiap permohonan perlu disertakan dengan sebab-sebab pertukaran program pengajian yang kukuh secara bertulis. Permohonan perlu mendapat perakuan dan kelulusan Rakan Pendamping Siswa (RPS) (program asal dan program dipohon), Dekan Pusat Pengajian (program asal dan program dipohon), Dekan Pengurusan Akademik dan Naib Canselor/Timbalan Naib Canselor (Akademik & Antarabangsa).
- 5. Bagi pelajar yang mendapat biasiswa/PTPTN atau sebagainya, pelajar mestilah mendapat kelulusan dari penaja masing-masing. Pelajar perlu berurusan secara terus dengan pihak penaja. Penerangan boleh diperolehi daripada Jabatan Hal Ehwal Pelajar dan Alumni.
- Sekiranya permohonan diluluskan, pelajar perlu mengambil tindakan untuk mendaftar kursuskursus baru yang ditawarkan dalam program pengajian baru tersebut.

- 7. Pelajar yang bertukar program pengajian dalam bidang yang sama boleh memohon pemindahan kredit bagi kursus teras dan kursus wajib universiti atau kursus yang sama dalam kurikulum program pengajian baru. Walau bagaimanapun, semua kursus lain yang tidak berkaitan dengan kurikulum program pengajian baru akan kekal dalam transkrip akademik tetapi tidak akan diambil kira dalam pengiraan PNG/PNGK dan kredit.
- 8. Pelajar yang bertukar program pengajian dalam bidang yang berlainan hanya boleh memohon pemindahan kredit bagi kursus wajib universiti sahaja atau kursus yang sama dalam kurikulum program pengajian baru. Walau bagaimanapun, semua kursus lain yang tidak berkaitan dengan kurikulum program pengajian baru akan kekal dalam transkrip akademik tetapi tidak akan diambil kira dalam pengiraan PNG/PNGK dan kredit.

Penangguhan Pengajian

Penangguhan pengajian adalah kebenaran kepada pelajar untuk tidak mengikuti pengajian pada sesuatu semester atas alasan-alasan tertentu yang dibenarkan Universiti.

Permohonan penangguhan pengajian dibenarkan kepada pelajar yang mempunyai masalah kesihatan dan disahkan sakit oleh Hospital Kerajaan/Doktor Panel Universiti / Pusat Kesihatan UniMAP sahaja. Bagi keskes tertentu sijil sakit yang bukan daripada Hospital Kerajaan atau Doktor Panel Universiti perlu mendapat perakuan Pusat Kesihatan UniMAP. Permohonan yang diasaskan selain daripada masalah kesihatan boleh dipertimbangkan sekiranya mempunyai alasan yang munasabah dan mendapat kelulusan Naib Canselor/ Timbalan Naib Canselor (Akademik & Antarabangsa).

Pelajar yang memohon untuk menangguhkan pengajian perlu mengisi Borang Penangguhan Pengajian (HEA/HEP-13) yang boleh didapati di Jabatan Pendaftar atau di Pusat Pengajian. Permohonan perlu mendapat perakuan dan kelulusan yang berikut:

- 1. Perakuan Rakan Pendamping Siswa (RPS).
- 2. Perakuan Dekan Pusat Pengajian,
- 3. Perakuan Dekan Jabatan Hal Ehwal Pelajar & Alumni.
- 4. Perakuan Kaunselor (jika perlu)
- 5. Perakuan Dekan Pengurusan Akademik, dan
- 6. Kelulusan Naib Canselor atau Timbalan Naib Canselor (Akademik & Antarabangsa)

Borang pemohonan penangguhan pengajian pelajar perlu dikemukakan sebelum minggu ketujuh (7) pengajian. Pemohonan selepas minggu ketujuh (7) hanya dibenarkan atas sebab kesihatan atau kes-kes tertentu yang mendapat kelulusan Naib Canselor/ Timbalan Naib Canselor (Akademik & Antarabangsa).

Pelajar tidak dibenarkan menangguhkan pengajian melebihi 2 semester berturut-turut kecuali dengan kelulusan Naib Canselor/Timbalan Naib Canselor (Akademik & Antarabangsa). Bagi kes selain sebab kesihatan, pelajar hanya dibenarkan pulang/keluar daripada universiti setelah permohonan penangguhan pengajian mendapat kelulusan universiti. Sekiranya pelajar telah pulang sebelum kelulusan diperoleh, ia adalah di bawah tanggungjawab pelajar sendiri.

Bagi pelajar yang menangguhkan pengajian atas sebab kesihatan/sakit atau untuk alasan-alasan yang dibenarkan, semester berkenaan tidak akan diambil kira dalam pengiraan semester yang digunakan untuk pengijazahan (Tanpa Penalti). Bagi kes Tanpa Penalti, kursus yang didaftarkan pada semester tersebut akan digugurkan, dan sekiranya terdapat keputusan peperiksaan yang telah disahkan pada peringkat Majlis Peperiksaan Universiti (MPU), keputusan peperiksaan tersebut juga akan terbatal.

Pelajar yang menangguhkan pengajian atas sebab selain daripada sebab kesihatan, semester berkenaan akan diambil kira dalam pengiraan semester yang digunakan untuk pengijazahan (Dengan Penalti) kecuali dengan kebenaran Naib Canselor/Timbalan Naib Canselor (Akademik & Antarabangsa). Bagi kes Dengan Penalti, kursus yang didaftarkan pada semester tersebut tidak akan digugurkan dan akan diambil kira dalam semester. Sebarang keputusan peperiksaan yang telah disahkan pada peringkat MPU juga tidak terbatal dan akan tertera dalam transkrip akademik pelajar.

Pelajar akan diberikan amaran secara bertulis oleh Pusat Pengajian sekiranya didapati tidak mendaftar pada sesuatu semester tanpa memberi sebarang permohonan penangguhan pengajian. Pelajar yang tidak memberi sebarang maklum balas dalam sesuatu tempoh yang diberikan boleh dikeluarkan dari senarai nama pelajar berdaftar Universiti/ditamatkan dan disahkan berhenti dari Universiti.

Pentarafan Pelajar

Taraf akademik pelajar diukur dengan sistem Purata Nilai Gred (PNG) sepanjang pengajian di universiti. Seseorang pelajar yang berjaya mendapat sekurangkurangnya 2.00 bagi PNG pada satu-satu semester diberi taraf 'Aktif' (A) dan boleh meneruskan pengajian dalam semester yang berikutnya. Pelajar juga dikehendaki mendapatkan Purata Nilai Gred Kumulatif (PNGK) sekurang-kurangnya 2.00 untuk berijazah.

Bagi pelajar yang dibenarkan mengambil Kursus Kuratif (iaitu kursus yang ditawarkan semasa cuti panjang), keputusan peperiksaan Kursus-kursus Kuratif akan dicantumkan dengan keputusan peperiksaan Semester 2 untuk menentukan markah PNG dan taraf akademik pelajar. Jika purata gabungan adalah lebih baik, maka

pelajar akan diberi taraf terbaharunya tetapi jika purata gabungan adalah kurang baik, maka taraf Semester 2 dikekalkan.

Pelajar dengan PNG kurang daripada 2.00 pada satusatu semester akan di beri taraf PERCUBAAN 1 (P1). Taraf PERCUBAAN 2 (P2) pula diberikan kepada pelajar yang mendapat PNG kurang daripada 2.00 bagi dua semester berturut-turut. Jika pelajar masih mendapat kurang dari 2.00 bagi PNG semester berikutnya pula, pelajar berkenaan tidak dibenarkan meneruskan pengajian, melainkan PNGK pelajar tersebut melebihi 2.00 dan pihak universiti memperakukannya. Pihak universiti berkuasa menamatkan pengajian mana-mana pelajar yang didapati tidak memenuhi prestasi dan kemajuan akademik yang ditetapkan.

Tempoh Minimum / Maksimum Pengajian Pelajar

Pelajar Sarjana Muda Kejuruteraan dan Sarjana Muda Teknologi Kejuruteraan perlu menamatkan program pengajian dalam tempoh masa yang telah ditetapkan, iaitu minimum 8 semester (4 tahun) dan tempoh maksimum 14 semester (7 tahun). Walau bagaimanapun, bagi pelajar yang memperolehi pengecualian kredit, tempoh maksimum yang dibenarkan adalah tidak boleh kurang daripada 6 semester (3 tahun) dan tidak lebih daripada 12 semester (6 tahun). Manakala pelajar Sarjana Muda Perniagaan dan Sarjana Muda Komunikasi Media Baharu pula, perlu menamatkan program pengajian dalam tempoh masa minimum 6 semester (3 tahun) dan tempoh maksimum 10 semester (5 tahun)

Tempoh minimum atau maksimum pengajian pelajar adalah seperti berikut:

| Program Pengajian | Minimum (Semester) | Maksimum (Semester) |
|---|-----------------------|------------------------|
| Sarjana Muda Kejuruteraan | 8 | 14 |
| Sarjana Muda Teknologi Kejuruteraan | 8 | 14 |
| Sarjana Muda Perniagaan | 6 | 10 |
| Sarjana Muda Komunikasi Media Baharu | 6 | 10 |

Kursus Kuratif

Kursus Kuratif diadakan selepas Semester 2. Pendaftaran bagi Kursus Kuratif adalah **amat terhad** dan tertakluk kepada penawaran semula kursus tersebut oleh Pusat Pengajian dengan kelulusan Senat. Pelajar hanya dibenarkan mengambil maksimum 10 unit (3 jenis) Kursus Kuratif pada satu-satu masa. Pengajaran-pembelajaran adalah dalam bentuk tutorial sahaja. Kursus Kuratif biasanya mengandungi 2 minggu pembelajaran dan 1 minggu peperiksaan.

Pengecualian Kredit

Pengecualian kredit ditakrifkan sebagai pengecualian daripada pendaftaran dan mengikuti kursus yang ditetapkan untuk sesuatu program pengajian berdasarkan kursus yang diambil oleh pelajar sebelum diterima masuk ke program pengajian universiti ini sebagaimana yang diluluskan oleh Dekan Pusat Pengajian/Dekan Pengurusan Akademik.

Pengecualian kredit diberi kepada pelajar yang telah mendapat sekurang-kurangnya C dalam kursus tertentu, mengikut sistem penggredan Universiti dan tertakluk kepada terma-terma dan syarat-syarat yang ditetapkan oleh universiti. Pengecualian kredit diberi kepada pelajar yang telah mengambil satu kursus yang sama atau setara dengan 80% kandungan

pembelajarannya adalah sama. Ianya juga terpakai untuk kursus-kursus berkaitan yang boleh digabungkan (2 kursus atau lebih) bagi satu kursus di UniMAP untuk diberi pengecualian.

Pengecualian kredit bagi kursus-kursus yang tertentu bergantung kepada senarai kursus yang diluluskan oleh Pusat Pengajian masing-masing yang telah diluluskan oleh Senat.

Sistem Peperiksaan Dan Penilaian

Peperiksaan bertulis diadakan pada hujung semester. Setiap pelajar mestilah terlebih dahulu memenuhi syarat-syarat kuliah, tutorial, amali dan sebagainya sebelum layak menduduki peperiksaan. Tempoh peperiksaan adalah seperti berikut:

Jadual 7: Tempoh Peperiksaan

| Nilai Kursus | Tempoh Peperiksaan |
|--------------|--------------------|
| 1 unit | 2 jam |
| 2 – 4 unit | 3 jam |

Keputusan peperiksaan pelajar ditentukan berdasarkan penilaian secara berterusan dari komponen kerja kursus dan peperiksaan bertulis. Sumbangan kerja kursus adalah 100% jika sesebuah kursus itu keseluruhannya berbentuk makmal. Kerja kursus biasanya merangkumi tugasan, laporan makmal dan ujian. Penilaian prestasi pelajar adalah berdasarkan kepada gred abjad dan mata penilaian seperti berikut:

Jadual 8: Gred Abjad dan Mata Penilaian

| | • | |
|------|------------|--------|
| GRED | MATA NILAI | STATUS |
| Α | 4.00 | |
| A- | 3.75 | |
| B+ | 3.50 | |
| В | 3.00 | LULUS |
| B- | 2.75 | LULUS |
| C+ | 2.50 | |
| С | 2.00 | |

Sidang Akademik 2014/2015 - Academic Session 2014/2015

| GRED | MATA NILAI | STATUS |
|------|------------|-------------|
| C- | 1.75 | 77 |
| D+ | 1.50 | |
| D | 1.00 | TIDAK LULUS |
| D- | 0.75 | |
| F | 0.00 | |

Gred **LULUS** untuk sesuatu kursus adalah tertakluk kepada keperluan kursus seperti yang berikut:-

- 1. Gred LULUS untuk semua kursus ialah Gred C dan ke atas
- 2. Gred TIDAK LULUS adalah Gred C- hingga Gred F
- 3. Sekiranya pelajar memperolehi PNGK (CGPA) ≥ 2.00 dan mendapat Gred C- atau Gred D+ untuk Kursus Teras, ianya adalah dikira sebagai LULUS.

Jadual 9: Pengiraan GPA dan CGPA:

| Judual 9: Peligitaan GPA aan CGPA: | | | | | | |
|--|-------------------------|-----------------------|----------|--------------|--|--|
| KURSUS | UNIT | NILAI GRED [NG] | GRED [G] | JUMLAH NG | | |
| EKT121 | 3 | 3.75 | A- | 11.25 | | |
| EMT102 | 4 | 2.50 | C+ | 10.00 | | |
| EMT111 | 4 | 3.50 | B+ | 14.00 | | |
| EMT112 | 4 | 4.00 | Α | 16.00 | | |
| EQT102 | 3 | 1.75 | C- | 5.25 | | |
| EUT122 | 2 | 2.75 | B- | 5.50 | | |
| | 20 | | (| 62.00 | | |
| PNG = 62.00/20 = 3.10 | | | | | | |
| ECT200 | 3 | 3.50 | B+ | 10.50 | | |
| EKT212 | 4 | 2.00 | (C) | 8.00 | | |
| EKT230 | 4 | 4.00 | A | 16.00 | | |
| EKT240 | 4 | 3.50 | B+ | 14.00 | | |
| EQT203 | 3 | 3.75 | A- | 11.25 | | |
| | 18 | | | 59.75 | | |
| PNG = 59.75/18 = 3.32 | | | | | | |
| PNGK = <u>Jumlah NG</u> Jumlah Bil. Unit Te = <u>62.00 + 59</u> 20 + 18 = 3.20 | rkumpul 1 <u>.75</u> | | , | | | |

Rayuan Penyemakan Semula Keputusan Peperiksaan

Atas sebab-sebab tertentu, pelajar mungkin ingin memohon untuk penyemakan dijalankan ke atas keputusan peperiksaan akhir semester pelajar. Pelajar hanya dibenarkan memohon menyemak semula keputusan peperiksaan akhir semester dalam tempoh 15 hari selepas keputusan rasmi peperiksaan dikeluarkan oleh Jabatan Pendaftar. Permohonan selepas tempoh ini tidak akan dipertimbangkan.

Pelajar perlu menghantar borang HEA-15m [Borang Rayuan Penyemakan Semula Keputusan Peperiksaan] kepada Unit Peperiksaan & Pengijazahan, Bahagian Pengurusan Akademik, Jabatan Pendaftar. Borang rayuan hendaklah dikemukakan dalam tempoh 15 hari selepas keputusan rasmi diumumkan. Pelajar perlu mengisi borang dalam dua (2) salinan. Satu (1) salinan adalah untuk simpanan pelajar.

Kadar bayaran rayuan ialah RM50 untuk setiap kursus. Pembayaran secara tunai atau Wang Pos/Pos Malaysia / Draf Bank / Cek atas nama **BENDAHARI UNIMAP.**

Penggunaan Bahasa Inggeris

Bahasa Melayu adalah bahasa rasmi universiti. Walau bagaimanapun Bahasa Inggeris digunakan secara meluas dalam proses pengajaran dan pembelajaran. Ini adalah untuk membantu pelajar dalam kerjaya mereka. Bagi kursus-kursus yang diajar dalam bahasa Inggeris, peperiksaan akan dijalankan dalam bahasa yang sama.

Sistem Rakan Pendamping Siswa (RPS)

Sistem Penasihatan Akademik menjadi penghubung antara pelajar dengan pensyarah untuk berbincang dan membuat keputusan berkenaan rancangan pengajian pelajar. Walaupun pelajar mendaftar sendiri secara dalam talian (on-line), pelajar perlu berjumpa dengan Rakan Pendamping Siswa (RPS) untuk mendapatkan nasihat semasa tempoh pendaftaran.

RPS adalah satu sistem di mana staf akademik menyelia sekumpulan kecil pelajar sepanjang tempoh pengajian pelajar di UniMAP. 'Penyeliaan' di sini melibatkan perjumpaan yang kerap secara tidak formal, di mana pelajar boleh bersantai dengan staf yang berperanan sebagai "'rakan" bagi membincangkan isu-isu akademik dan sosial yang berkenaan dengan mereka. Pelajar yang mempunyai prestasi akademik yang tidak memuaskan boleh merujuk kepada RPS sebagai 'mentor', dan pelajar tersebut menjadi 'mentee', di mana ini akan benarbenar membantu pelajar dalam setiap perkara yang memerlukan penyelesaian.

Pusat-Pusat Pemantapan Akademik

Pusat-pusat ini ditubuhkan untuk menyokong pencapaian akademik pelajar UniMAP:

Pusat Pengajian Pembangunan Insan dan Teknokomunikasi (iKOM)

Pusat Pengajian Pembangunan Insan dan Teknokomunikasi (iKOM) menawarkan kursus-kursus Keperluan Universiti dan pelbagai kursus yang menyalurkan pengetahuan sosial dan kemanusiaan yang berkaitan dengan semua bidang pengajian di UniMAP. Selain itu iKOM berperanan untuk meningkatkan kemahiran generik pelajar dan

kemahiran insaniah (soft skills) yang merangkumi komunikasi, bahasa, ICT dan sosio-kemanusiaan dalam menghadapi cabaran dinamik dunia global.

2. Pusat Kejuruteraan

Pusat Kejuruteraan ditubuhkan bagi mengendalikan makmal dan bengkel umum (gunasama) yang diperlukan oleh pelbagai program yang ditawarkan di UniMAP

Pusat ini juga menyokong aktiviti penyelidikan dan pembangunan di UniMAP serta menjadi pusat mereka bentuk dan menghasilkan produk-produk kejuruteraan yang inovatif. Pusat Kejuruteraan juga menawarkan kemudahan bagi kursus-kursus yang memerlukan latihan dan kemahiran teknikal, selari dengan standard industri.

3. Institut Matematik Kejuruteraan

Institut Matematik Kejuruteraan (IMK) adalah pusat yang merancang dan mengendalikan kurikulum Matematik Kejuruteraan di UniMAP. Ia berperanan sebagai pusat rujukan dalam menyediakan kepakaran dalam kaedah penyelidikan matematik, simulasi dan kaedah statistik. Pusat ini juga berfungsi sebagai pusat latihan dalam kampus dan personel luar kampus dalam bidang yang berkaitan dengan matematik.

4. Pusat Bahasa Antarabangsa

Pusat Bahasa Antarabangsa menyediakan kursus-kursus bahasa Keperluan Universiti untuk semua pelajar UniMAP bagi program pengajian peringkat Diploma dan Ijazah Sarjana Muda. Pusat ini menawarkan bukan sahaja kursus Bahasa Melayu dan kursus Bahasa Inggeris tetapi juga menawarkan kursus-kursus bahasa yang lain

seperti Bahasa Arab, Bahasa Jerman, Bahasa Jepun, Bahasa Mandarin, Bahasa Korea, Bahasa Rusia dan Bahasa Thai.

Pusat Kokurikulum

Pusat Kokurikulum menawarkan pelbagai kursus kokurikulum dan kursus-kursus Badan Beruniform. Semua pelajar wajib untuk mengambil 3 unit kursus Kokurikulum. Pusat ini menawarkan sehingga 44 jenis kursus untuk pelajar tanpa mengira program akademik mereka.

5. Pusat Kerjasama Industri dan Agensi Kerajaan

Pusat Kerjasama Industri dan Agensi Kerajaan (CIGC) berperanan menjalin hubungan dengan pihak industri dan agensi kerajaan dalam pelbagai aspek, terutama dalam program yang berkaitan terus dengan pembelajaran pelajar. Program seperti pendedahan kepada industri, forum bersama industri dan Latihan Perindustrian Staf, diselia dan diselaraskan oleh pusat ini. Sesetengah daripada program ini wajib diambil oleh semua pelajar.

Bahagian Pengurusan Akademik Jabatan Pendaftar

Bahagian Pengurusan Akademik ini bertanggungjawab untuk mengendalikan urusan yang berkaitan kemasukan pelajar, pemprosesan data dan rekod pelajar, peperiksaan dan pengijazahan pelajar dan Senat Universiti.

Unit-unit yang terdapat di Bahagian Pengurusan Akademik, Jabatan Pendaftar terbahagi kepada:

1. Unit Kemasukan dan Rekod Pelajar

Unit Kemasukan dan Rekod Pelajar bertanggungjawab untuk mengendalikan urusan yang berkaitan dengan kemasukan pelajar dan pemprosesan data dan rekod pelajar. Antara tugas dan tanggungjawab unit ini adalah:

- Mengendalikan secara keseluruhan proses pengambilan dan pendaftaran pelajar dalam negara pada peringkat ijazah pertama dan diploma.
- ii. Mengendalikan proses pengambilan dan pendaftaran pelajar antarabangsa pada peringkat ijazah pertama.
- iii. Mengurus dan mengendalikan aspek pemprosesan data dalam Sistem Maklumat Pelajar.
- iv. Menguruskan rekod peribadi pelajar dan status pelajar termasuk permohonan penangguhan pengajian dan pertukaran program pengajian pelajar.
- v. Menguruskan pendaftaran kursus pelajar secara *online* bagi setiap semester pengajian.
- vi. Menguruskan proses pengecualian unit dan pemindahan kredit pelajar.

2. Unit Peperiksaan dan Pengijazahan

Unit Peperiksaan dan Pengijazahan bertanggungjawab untuk mengendalikan dan memantau perjalanan Peperiksaan Akhir Semester dan perkara-perkara yang berkaitan dengannya. Antara tugas dan tanggungjawab unit ini adalah seperti berikut:

- Mengeluarkan Pekeliling Peperiksaan kepada Pusat Pengajian/ Pusat/Institut.
- ii. Mengeluarkan Jadual Waktu Peperiksaan untuk Program Diploma dan Ijazah.
- iii. Menguruskan Peperiksaan Akhir Semester dalam jangkamasa yang ditetapkan.
- iv. Menjadi Sekretariat kepada Majlis Peperiksaan Universiti.
- v. Menguruskan pemprosesan data peperiksaan mengunakan Sistem Maklumat Pelajar.
- vi. Mengeluarkan keputusan peperiksaan akhir semester.
- vii. Menguruskan proses rayuan pelajar untuk menyemak semula keputusan peperiksaan.
- viii. Mengeluarkan Transkrip Akademik selepas Konvokesyen.
- ix. Mengendalikan urusan peminjaman dan pemulangan jubah staf akademik.
- x. Menyemak kelayakan pengijazahan untuk pelajar tahun akhir serta mengeluarkan surat penamatan pengajian dan kelayakan pengijazahan untuk pelajar yang layak bergraduat.
- xi. Bertanggungjawab terhadap konvokesyen pelajar dari segi jemputan serta pinjaman dan pemulangan pakaian konvokesyen.
- xii. Menguruskan proses penyediaan dan penyerahan skrol pengijazahan kepada graduan.
- xiii. Merekod dan mengemaskini data siswazah.

UnitSenatbertanggungjawabuntukmengendalikan urusan yang berkaitan dengan Senat Universiti. Antara tugas dan tanggungjawab yang dijalankan adalah.

- Merancang aktiviti Senat dan Jawatankuasa di bawahnya, untuk memberi khidmat Urusetia dan menyelaraskannya dengan pihak-pihak lain yang berkaitan, dalam penawaran program-program sedia ada dan baru.
- ii. Menuediakan Akademik. Kalendar menguruskan senarai penawaran kursus serta berurusan dengan Kementerian Pendidikan Malausia (KPM) dan Jabatan Perkhidmatan Awam (JPA) mengenai penawaran program baru, penubuhan pusat pengajian/Jabatan dan Unit.
- iii. Menguruskan pencalonan penerima Ijazah Kehormat

Alamat:

Bahagian Pengurusan Akademik Jabatan Pendaftar Universiti Malaysia Perlis Tingkat 3, Bangunan KWSP Jalan Bukit Lagi 01000 Kangar PERLIS.

Admission Requirements for Undergraduate Degree Program Academic Session of 2014/2015

International Students

| Country | General Requirements | | Specific Requirements | | |
|-----------|--|----------------------------|--|-------------------|--|
| China | Completed 12 years of education in 3 levels of schooling (Primary School, Junior Middle School, and Senior Middle School). | Bachelor of Engineering | (Electronic-Based) • English • Mathematics | 60% 60% | |
| | Graduated from Senior Middle School with Senior High School Certificate. | | Physics/Chemistry (Bio-Based) | 60% | |
| | Obtain minimum average score of 60% in Senior High School Certificate. Obtain TOEEL 525 / JELTS 5.5 / Fault releast. | | English Mathematics Physics/Chemistry/Biology | 60% 60% 60% | |
| | Obtain TOEFL 525 / IELTS 5.5 / Equivalent (Candidates who do not possess qualification equivalent toTOEFL 525 / IELTS 5.5 are required to undergo Intensive English Course for six (6) months in UniMAP). Other requirements that have been endorsed by the University Senate. | Bachelor of Business | English Mathematics Physics/Chemistry/Biology | 60% 60% 60% | |
| Indonesia | Completed 12 years of education in 3 levels of schooling (Primary School, Junior Secondary School, and Senior Secondary School @ Sekolah Menengah Atas). Pass Senior Secondary @ Sekolah Menengah Atas examination. | Bachelor of Engineering | (Electronic-Based) English Mathematics Physics/Chemistry | 60% 60% 60% | |
| | Pass with minimum Grade Point Average (GPA) of 6.00 in Senior Secondary @ Sekolah Menengah | | (Bio-Based) | | |
| | Atas examination. • Obtain TOEFL 525 / IELTS 5.5 / Equivalent | | English Mathematics Physics/Chemistry/Biology | 60% 60% 60% | |
| | (Candidates who do not possess qualification equivalent toTOEFL 525 / IELTS 5.5 are required to undergo Intensive English Course for six (6) months in UniMAP). • Other requirements that have been endorsed by the University Senate. | Bachelor of Business | English Mathematics Physics/Chemistry/Biology or Business/Economics/Commerce/ Accounting | 60% 60% 60% | |

| Country | General Requirements | | Specific Requirements | |
|--------------|---|---|--|--|
| Saudi Arabia | Completed 12 years of education in 3 levels of schooling (Elementary School, Intermediate School, and General Secondary School/Technical Junior College) Pass and obtain at least 60% in General Secondary Education Certificate (Tawjihiyah)/Secondary Vocational School Diploma/Secondary Commercial School Diploma/Secondary Agricultural School Diploma examination. Obtain TOEFL 525 / IELTS 5.5 / Equivalent (Candidates who do not possess qualification equivalent toTOEFL 525 / IELTS 5.5 are required to undergo Intensive English Course for six (6) months in UniMAP). Other requirements that have been endorsed by the University Senate. | Bachelor of Engineering Bachelor of Business | (Electronic-Based) • English • Mathematics • Physics/Chemistry (Bio-Based) • English • Mathematics • Physics/Chemistry/Biology • English • Mathematics • Physics/Chemistry/Biology or • Business/Economics/Commerce/ Accounting | 60% 60% 60% 60% 60% 60% 60% 60% |
| Iraq | Completed 11 or 12 years of education in 3 levels of schooling (Primary School, Intermediate Secondary School, and Preparatory Secondary School/Vocational Secondary School) Pass and obtain at least 60% in Preparatory Secondary School/Vocational Secondary School. Obtain TOEFL 525 / IELTS 5.5 / Equivalent (Candidates who do not possess qualification) | Bachelor of Engineering | (Electronic-Based) • English • Mathematics • Physics/Chemistry (Bio-Based) • English • Mathematics • Physics/Chemistry/Biology | 60% 60% 60% 60% |
| | equivalent to TOEFL 525 / IELTS 5.5 are required to undergo Intensive English Course for six (6) months in UniMAP). • Other requirements that have been endorsed by the University Senate. | Bachelor of Business | English Mathematics Physics/Chemistry/Biology or Business/Economics/Commerce/ Accounting | 60% 60% 60% |

| Country | General Requirements | | Specific Requirements | |
|----------|--|---|--|-------------------|
| Nigeria | Completed 12 years of education in 2 or 3 levels of schooling (Primary School, Junior Secondary School and Senior Secondary School/Technical Secondary School) Pass and obtain at least B+ in five (5) subjects in | EngineeringEnglishMathematicsPhysics/Chemistry | Mathematics | 60% 60% 60% |
| | Senior School Certificate. | | (Bio-Based) | |
| | Obtain TOEFL 525 / IELTS 5.5 / Equivalent (Candidates who do not possess qualification equivalent toTOEFL 525 / IELTS 5.5 are required to undergo Intensive English Course for six (6) months in UniMAP). Other requirements that have been endorsed by the University Senate. | | English Mathematics Physics/Chemistry/Biology | 60% 60% 60% |
| | | Bachelor of Business | English Mathematics Physics/Chemistry/Biology or Business/Economics/Commerce/ Accounting | 60% 60% 60% |
| Thailand | Completed 12 years of education in 3 levels of schooling (Primary School, Lower Secondary School and Upper Secondary School/Religious School) | Bachelor of Engineering | (Electronic-Based)EnglishMathematicsPhysics/Chemistry | 60% 60% 60% |
| | Pass and obtain at least CGPA 2.4 or 60% in Higher Secondary School Certificate (Mathayam Suksa 6) Obtain TOEFL 525 / IELTS 5.5 / Equivalent | (Bio-Based) • English • Mathematics • Physics/Chemistry/Biology | 60% 60% 60% | |
| | (Candidates who do not possess qualification equivalent toTOEFL 525 / IELTS 5.5 are required to undergo Intensive English Course for six (6) months in UniMAP). • Other requirements that have been endorsed by the University Senate. | Bachelor of Business | English Mathematics Physics/Chemistry/Biology | 60% 60% 60% |

The Academic System

The Bachelor of Engineering and The Bachelor of Engineering Technology curriculum are designed to be completed in 4 years while the Bachelor in Business and the Bachelor of New Media Communication are to be completed in 3 years with each academic year divided into Semester I and Semester II. Each semester consists of 14 study weeks. Examination will be held at the end of the semester. Courses are divided into four levels which are levels 100, 200, 300, and 400.

For graduation purposes, Bachelor of Engineering students must complete 120 units of Core Courses and the Bachelor of Engineering Technology students will have to complete 123 units of Core Courses. Bachelor of Business students must complete 72 or 74 units of Core Courses (based on specialization) and 30 units of Elective Courses while the Bachelor of New Media Communication students must complete 87 units of Core Courses and 15 units Elective Courses.

Students are also required to complete University Requirement Courses of 17 units for Bachelor of Engineering Degree, 19 units for Bachelor of Engineering Technology Degree, 20 units for Bachelor of Business Degree and 18 units for Bachelor of New Media Communication.

To graduate, students also need to pass all courses and obtain the required number of credits according to their respective study programmes as well as a GCPA of at least 2.00.

Programme Structure

The programme structures for the Bachelor of Engineering, Bachelor of Engineering Technology, Bachelor of Business and Bachelor of New Media

Communication students are shown in **Tables 1 (a), 1 (b), 1 (c), 1 (d) and 1 (e).** Students are required to complete 137 units for Bachelor of Engineering, 142 units for Bachelor of Engineering Technology, 122 or 124 units for Bachelor of Business and 120 units for Bachelor of New Media Communication in order to graduate.

Types Of Courses

1. University Core Courses

University Core Courses are courses which are NOT the student's major. These courses are offered by the School of Human Development and Techonocommunication (iKOM), the Centre for International Languages (CIL) and the Co-Curriculum Centre. All these courses are compulsory and students need to pass with grade C to graduate. The University Core Courses are:

a. Engineering Entrepreneurship (2 units)

All students are required to take 2 units of Engineering Entrepreneurship course. Students are also advised to take other courses in the entrepreneurship category, where the units collected will cover the Optional Course requirement.

b. Ethnic Relations (2 units)

Ethnic Relations is compulsory for all students.

c. Islamic and Asian Civilization (2 units)

Islamic and Asian Civilization is compulsory for all students.

d. University Malay Language (2 units)

University Malay Language is compulsory for all students.

e. University English Language (2 units)

It is compulsory for all students to take English for Technical Communication (for Bachelor of Engineering and Bachelor of Engineering Technology) or English for Academic Purposes (for Bachelor of Business and Bachelor of New Media Communication). Students who have obtained band 1, 2 or 3 in MUET need to take Foundation English and pass with grade C before enrolling for English for Technical Communication/English for Academic Purposes. For students who acquired band 4 or 5 in MUET, they can take 2 additional units of Foundation English which be considered as an Optional Course.

f. Thinking Skills (2 units)

Thinking Skills is compulsory for all students.

g. Skills and Technology in Communication (2 units)

Skills and Technology in Communication is compulsory for all Bachelor of Engineering Technology and Bachelor of Business students.

h. Business Communication (3 units)

Business Communication is compulsory for all students of Bachelor of Business.

i. Co-Curriculum Programme (3 units)

All students are required to collect 3 units for Co-Curriculum during their study at UniMAP.

Two (2) units are to be collected from Uniformed Bodies, where the 1st unit needs to be taken in Semester I and another 1 unit in Semester II (in the First Year of study), while the other 1 unit can be collected from any other Co-Curriculum courses in any semester.

2. Core Courses (Bachelor of Engineering)

Core Courses are courses that must be taken by Bachelor of Engineering students. These courses are part of the requirements for graduation. Students who fail Core Courses must repeat them and pass before they can graduate.

3. Core Courses (Bachelor of Engineering Technology)

Core Courses are courses that must be taken by Bachelor of Engineering Technology students. These courses are part of the requirements for graduation. Students who fail Core Courses must repeat them and pass before they can graduate.

4. Core Courses (Bachelor of Business)

There are two types of Core Courses for the Bachelor of Business:

- a. Business Core Course: Business Core Courses are contemporary courses in the business field. It is compulsory for Bachelor of Business students to take these courses.
- **b. Programme Core Courses:** Programme Core Courses meanwhile are offered based on the students' major.

These courses are part of graduation requirement. Students who fail any of the Core Courses must repeat them and pass before they can graduate.

Elective Courses (Bachelor of Business

Students can choose Elective Courses based on their interests.

6. Optional Courses

Optional Courses are courses which are offered by the School of Human Development and Technocommunication (iKOM) and the Centre for International Languages for the students of Engineering and Engineering Technology. Two (2) units of Optional Courses have to be taken by students of Bachelor of Engineering and Engineering Technology students, during their study in UniMAP.

7. Prerequisite Courses

All students MUST take and pass prerequisite courses set before registering for any subsequent courses. The subsequent courses have prerequisites which have to be fulfilled as determined in the academic programme structure of the degree programmes offered. Students who fail the prerequisite courses and intend to take them together with the subsequent courses in the same semester, must apply to, and obtain the approval of the Dean of schools. Note, however, that prerequisite and subsequent courses cannot be taken together in the same semester for language courses.

The Unit System

Each course is given a value known as the UNIT. The unit is based on the scope and the depth of a course. With the exception of certain cases, the value of a unit for each Teaching & Learning mode is in **Table 2**:

Table 2: Unit Evaluation per Week for 14-Week Semester

| Form of Contact | Unit Value | Total Contact/ Week |
|---|------------|---|
| Lecture | 1 | 1 hour |
| Laboratory/Tutorial | 1 | 2 hours |
| Final Year Project | 1 | 3 hours |
| Assisted Learning involving delivery mode such as Problem Based Learning (PBL), e-learning modules, visits ect | 1 | 3 hours |
| Industrial Training | 1* | Depending on the programme of study |

^{**} Note: The value of 1 unit of the Industrial Training is equivalent to 2 weeks of training.

Teaching and Learning Approaches at UniMAP

Many of the Core Courses offered include Theory Component and Practical Component, the value of contact hours for which is detailed below:

1. Theory Component

One (1) unit of Theory Component is equivalent to 1 hour of lecture/ tutorial/reading per week or 14 hours per semester.

2. Practical Component

One (1) unit of Practical Component for Engineering programme is equivalent to 2 contact hours per week or 28 hours per semester.

One (1) unit of Practical Component for Engineering Technology programme is equivalent to 3 contact hours per week or 42 hours per semester.

For most of the Core Courses, students are required to complete a mini project and sit for an examination or a *Viva Voce* at the end of the semester.

The Practical Components consist of the following teaching and learning modes:

- 1. Lab Intensive Learning –two or three students carry out an experiment in a group. In some basic lab intensive programmes, each student will conduct an experiment individually (1:1) and not in a group.
- 2. Teaching Factory Learning –five to six students carry out a process run in a group using actual scale equipment used in industry.
- 3. E-Learning Learning approach that is reinforced using ICT, complementing the conventional approach. Through the UniMAP website, students obtain access to course modules and topics. The modules consist of lecture notes in multimedia format such as audio, video, graphic, animation, simulation, games and other interactive activites.
- 4. Exposure to Industry Students will make multiple visits to industry for a certain period of time throughout their study at UniMAP. These include IndEx (Industrial Exposure) programmes, InTra (Industrial Training), Industrial Entrepreneurship Exposure (IndEnt) and others.

Industrial Training

Industrial Training is a course, carrying 4 units for Bachelor of Engineering students, 12 units for Bachelor of Engineering Technology students, 6 units for Bachelor of Business and Bachelor of New Media Communication students

Third (3rd) Year Bachelor of Engineering students are required to undergo 12 weeks of Industrial Training in order to collect 4 credits for this course while 4th Year

of Bachelor of Engineering Technology students are required to undergo 12 weeks of Industrial Training in order to collect 12 credits for this course. Third year students of Bachelor of New Media Communication are required to undergo 12 weeks of Industrial Training in order to collect 12 credits for this course.

Students of Bachelor of Business (International Business) are required to do Industrial Training during the 2nd and 4th semester. Students have two options to choose from, **Option 1 (2+2)** or **Option 2 (3+1).** For Option 1 (2+2), students will undergo two phases (2 months +2 months) of Industrial Training in selected multinational companies in Malaysia. For Option 2 (3+1), students will undergo Industrial Training in the selected multinational companies in Malaysia for the first 3 months, followed by an educational trip abroad (International Business Field Trips).

Bachelor of Business (Engineering Entrepreneurship) students will undergo practical training via the Business Incubator programme for 12 weeks. They will earn 6 credits hours after the 4th semester.

Contact hours evaluation is calculated based on an average of 8 contact hours per day for 5 days in a week, where 8 hours per day \times 5 days = 40 hours per week (working hours for designated organization/corporation).

The main objectives of the Industrial Training are to:

- Instill professionalism in students
- Raise students' awareness on the importance and connection between industrial training, lab intensive and engineering theories.
- Provide students with early exposure to industrial environment and practices. Students also are given the opportunity to equip themselves with the necessary skills and knowledge needed in their respective academic and training fields.

The Centre for Industrial and Governmental Collaboration (CIGC) coordinates programmes which require the involvement of industry and government agencies with relevant units and centres:

- 1. Industrial Exposure (IndEx)-for students who have completed Year 1.
 - a. Short term exposure programme 1 day
 - b. Talks, briefings, demonstrations by and dialogues with experts, managers and engineers from the industry
 - c. Visits to industry
- Industrial Entrepreneurship Exposure (IndEnt) for Year 2 students
 - a. Short term exposure programme 1 day
 - Briefings, demonstrations by and dialogues with small sector industries, R&D firms and government bodies such as the Ministry of Entrepreneur and Cooperative Development.

Business Incubator Programme

Teaching and Learning approaches for Bachelor of Business (Engineering Entrepreneurship) programme, not only includes lectures and tutorials but also Practical Training through the Business Incubator Program. After the 4th semester, students will participate in the Business Incubator Programme for 12 weeks which will earn them 6 credit hours.

Students are mentored by companies in Business Incubators, providing them the opportunity to be part of the team involved in product development which may even lead to commercialisation. They will experience how ideas and innovations can lead to products for consumers. In addition to that, they will see for themselves the flow of business processes.

At the end of the programme, students are required to prepare a report on their experience throughout the Business Incubator Programme in the selected companies.

Malaysian Business Incubators form a tightly-knit group under the National Incubator Network Association (NINA) which is affiliated with the Association of Asean Business Incubation (AABI). Its members include Technology Park Malaysia, Malaysian Technology Development Corporation, Sirim and Kulim Technology Park Corporation. UniMAP works closely with these organisations to ensure the success of the programme.

International Business Field Trips

Students will undergo industrial training in their second (2nd) and fourth (4th) semester. They have two options to choose from; Option 1 (2+2) or Option 2 (3+1). For the Option 1 (2+2), students will undergo two phases (2 months +2 months) of Industrial Training in selected multinational companies in Malaysia. Coordination will be conducted in collaboration with UniMAP Centre for Industrial and Governmental Collaboration (CIGC).

For Option 2 (3+1), students will undergo Industrial Training in selected multinational companies in Malaysia for the first 3 months and then proceed to an educational trip abroad for a period of 1 month. Students are given the freedom to choose any one of the two options given for their Industrial Training according to their interest and financial abilities.

Course Code

Each course is assigned a code. For Bachelor of Engineering, Bachelor of Engineering Technology, Bachelor of Business and Bachelor of New Media Comunication programmmes, the codes are summarized in **Tables 3(a), 3(b) and 3(c)** below:

Table 3(a): First Alphabet; Type of programme offered at the Bachelor Degree level.

| First alphabet in the code | Type of programme offered | | |
|----------------------------|--|--|--|
| Е | Bachelor of Engineering | | |
| В | Bachelor of Business | | |
| Р | Bachelor of Engineering Technology | | |
| K | Bachelor of New Media Communication | | |
| U | General Course (This subject can be taken by students from all programmes) | | |

Table 3(b): Second Alphabet; Courses offered by faculties

| Second alphabet in the code | Faculty offering courses |
|-----------------------------------|--|
| Е | School of Electrical Systems Engineering |
| М | School of Microelectronic Engineering |
| K | School of Computer & Communication Engineering |
| N | School of Mechatronic Engineering |
| В | School of Material Engineering |
| Р | School of Manufacturing Engineering |
| R | School of Bioprocess Engineering |
| Α | School of Environmental Engineering |
| D | School of Mechanical Engineering Technology |
| G | School of Electronic Engineering Technology |
| L | School of Electrical Engineering Technology |
| S | School of Civil Engineering Technology |
| Т | School of Chemical Engineering Technology |
| С | Engineering Centre |
| Q | Institute of Engineering Mathematics |
| I | Centre for Industrial Collaboration |
| F | Centre of Business Innovation and Technopreneurship (PPIPT) |
| U | School of Human Development and Technocommunication (iKOM) |

Sidang Akademik 2014/2015 - Academic Session 2014/2015

| Second alphabet in the code | Faculty offering courses |
|-----------------------------------|------------------------------------|
| V | Centre for International Languages |
| Z | Co-Curriculum Centre |

Table 3(c): Third Alphabet - University Requirement and Core Courses

| Third alphabet in the code | Types of Courses (University Requirement or Core Courses) |
|----------------------------|--|
| Т | Core Courses |
| W | University Requirement Courses |

The three numbers which follow the Alphabet Codes represent the following; The first number represents the level of course. The second and third represent numbers assigned to the course. The codes are simplified in **Table 4.**

Table 4: Course Code

| Α | В | С | 1 | 2 | 3 | 4 | NUMBERS | DESCRIPTION |
|--------------|---------------|---------------|---------------|---------------|---------------|---------------|-------------------|--|
| \downarrow | ↓ | ↓ | \downarrow | ↓ | \downarrow | ↓ | NOMBERS | DESCRIPTION |

| L | \rightarrow | \rightarrow | \rightarrow | \rightarrow | \rightarrow | \rightarrow | TYPE OF PROGRAMME | Refer Table 3(a) |

Pre-registration is a system that enables students to pre-register their courses via online for all the courses to be taken in the following semesters at an earlier period. The period set for the preregistration is before the semester break of each semester. All students (Active/P1 or P2 Status/ With Outstanding Fees) ARE REQUIRED to perform the preregistration process.

Students **MUST** register within the deadline set. Courses to be registered are courses to be taken in the following semester (all courses including Cocurriculum Courses). Students are encouranged to meet with their Rakan Pendamping Siswa (RPS) and to fill up the HEA-09a form prior to the Pre-registration process. Students who fail to Pre-register their courses within the period set run the risk of their official registration to be affected (seats for the course are subject to availability). For the pre-registration, students are not required to print the Pre-registration slip or to get the approval from their RPS.

Course Registration

All active students are required to register for courses for each semester. The course registration is done online by all students. Course registration must be completed within the dates specified by the Student Admissions and Records Unit via email and portal.

Students are required to discuss with their Rakan Pendamping Siswa (RPS) regarding courses that they will have to register for each semester. Students must bring the registration slip for verification by RPS in the system during the discussion session. Registration of courses without the RPS verification is considered **INVALID**. If there are any changes in student course registration, i.e add, drop or withdraw courses within the prescribed period, the student must also obtain verification from the RPS.

Students who fail to register within the prescribed period shall be subject to a penalty of RM50. Late registration must not exceed the 3rd week of the semester. Students must complete form HEA-09 (Late Registration Form) and obtain the approval from the Dean.

New students will register online on the specified date during the orientation week according to their School. Students will be briefed by their school about courses in their programme of study during the orientation week.

Students are responsible to check and ensure that all the particulars stated in the Course Registration Slip are correct. Student who apply to add/ drop/ withdraw registration after the prescribed period without reasons accepted by the university, may be fined. Registration after the prescribed period will only be considered by the Dean of the School for students with specific reasons. Students are not allowed to register add/drop/ withdraw during the examination week.

Students who do not register for a maximum of 2 consecutive semesters without any reason can be terminated through the submission of form HEA-20 (Termination of Study Form).

Students who have been terminated and wish to place an appeal to reasume their studies may do so by submitting an appeal letter to the Vice-Chancellor through the Dean (Dean's verification required). A penalty of RM100 will be imposed on the student whose application for re-admission has been approved.

1. Active Student Course Registration

All "Active" students are allowed to register not more than 22 units and not less than ten 10 units except for those who are involved in Industrial Training and the Final Year Project. Student who wish to register

Akademik Academic Guide Book

more than 22 units, need to obtain approval from their RPS and verification by the Dean. **Table 5** below summarises units that students can register for each semester based on their status:

Table 5: Summary of Units for Active Student

| Student Status | Minimum | Maximum |
|---|---------|---------|
| Active Student | 10 | 22 |
| Active student with Industrial Training (LI) and Final Year Project (FYP) | 10 | 28 |

^{***} Students who do not take FYP or LI can take more than 22 units but with the approval from the Dean and must fill the HEA-09a form (Course Registration Form).

2. Probation Student Course Registration (P)

Student with the "Probation" status are not allowed to register online, by themselves. The students must meet up with their RPS to obtain confirmation from the Dean. They also need to fill up form HEA-09b (Course Registration Form-Probation (P)) before handing it to the Assistant Registrar. Only the Assistant Registrar of School/Registrar Office is allowed to register the subjects for the students in this case. The numbers of units allowed is as in **Table 6** below:

Table 6: Summary of Units for Probation Student

| Student Status | Minimum | Maximum |
|----------------|---------|---------|
| Probation (P1) | 10 | 12 |
| Probation (P2) | 8 | 10 |

Add Courses / Drop Courses / Course Withdrawal

1. Adding Courses

- a. The period of time allowed for the adding of courses is up to week 2 (week of study).
- b. Students are required to fill in Form HEA-11 (Adding Course Form) before submitting it to the Assistant Registrar of the School to be updated in the system.

2. Dropping Courses

- a. The period of time allowed to drop courses is up to the week 6 (week of study).
- b. Students must use Form HEA-10 (Dropping Courses Form), to be signed by the course lecturer, Dean of the School and submit it to the Assistant Registrar of the School to be updated in the system.

Course Withdrawal (TD)

- a. With the consent of Course Lecturer and Dean of the School, a student may apply to withdraw from a course registered in a semester not later than the last day of work in week 12 (week of study).
- b. Permission to allow students to withdraw a course is subject to the minimum unit allowed except with permission of the Dean.
- Witdrawal status (TD) will be recorded in the record of registration and academic transcript.
 However, the grade will not be included to contribute towards the GPA and CGPA.

Change of Programme

Change of programme refers to the changing of a programme of study to another, for reason agreed by both of the current Dean and Dean of school offering the intended programme.

Students are not encouraged to change programmes as it involves distribution of resources that have been planned at the beginning of each academic session. However, an appeal to change programme can be considered based on certain conditions:

- An application can only be made by students upon completion of at least one semester of study. The students will have to complete form HEA-12 (Change of Programme Application Form). The application form is available at the Registry Department or at Schools. However, for certain cases, change of programme at the beginning of study, may be considered with approval by the Vice Chancellor or Deputy Vice Chancellor (Academic & International).
- 2. The application must be submitted within the first 2 weeks of the semester. The application form must be attached together with a copy of the latest semester result or Matriculation/STPM/Diploma result.
- 3. Students can only apply for change of programme no later than the first 2 semesters of study at UniMAP. An application made into the 3rd semester of study will not be considered.
- 4. Every application for change of programme must be justified with strong reasons for the change. The application must be approved by the RPS (the current and intended programme), Dean of the school (the current and intended programme),

the Dean of Academic Management and Vice Chancellor / Deputy Vice Chancellor (Academic & International).

- 5. For students who have obtained scholarships or PTPTN or other types of sponsorships, approval must be obtained from their respective sponsors. Students need to deal directly with their sponsors. Further advice may be obtained from the Student Affairs and Alumni Department.
- 6. If the application is successful, the student must register for new courses offered in the new programme.
- 7. Students who change programmes in the same field can apply for credit transfer for Core Courses and University Core Courses or a similar course in the curriculum of the new programme. While the other courses which have been taken but not related to the curriculum of the new programme will remain in academic transcrip, the GPA/CGPA and credit amassed will not be taken into account.
- 8. Student who change programmes across different fields can only apply for credit transfer for University Core Course or similar courses in the curriculum of the new programme. While other courses which have been taken but are not related to the curriculum of the new programme will remain in academic transcrip, the GPA/CGPA and credits amassed will not be taken into account.

Postponement of Study

Postponement of study is permission granted to students for not attending studies in a semester for reasons allowed by the university.

Postponement of study is permitted for students who have health problems and whose illness is verified by government hospitals or University panel doctors or Pusat Kesihatan UniMAP. For certain cases, medical certificate from hospitals other than that mentioned, must be approved by Pusat Kesihatan UniMAP. An application made due to reasons other than ill health may be considered if it is reasonable and approved by the Vice Chancellor / Deputy Vice Chancellor (Academic and International).

Students can apply for postponement of study by filling in Form HEA/HEP-13 (Borang Penangguhan Pengajian / Postponement of Study Application Form) which can be obtained from The Registry Department or schools. Application must be:

- Recommended by the Rakan Pendamping Siswa (RPS)
- 2. Recommended by the Dean of School
- Recommended by the Dean of Student Affairs and Alumni
- 4. Recommended by the counsellor (if applicable)
- 5. Recommended by the Dean of Academic Management and
- 6. Approved by the Vice Chancellor / Deputy Vice Chancellor (Academic and International).

Application for postponement of study should be submitted before the 7th week of an academic session. Application made after that period will only be allowed for medical reasons and other reasons with the approval of the the Vice Chancellor / Deputy Vice Chancellor (Academic and International).

Students are not allowed to postpone their studies for more than 2 semesters consecutively except with the approval of the Vice Chancellor / Deputy Vice Chancellor (Academic and International). In cases not related to health, students are only allowed to leave the university

after the application for postponement is approved by the university. Students who leave university before the approval is granted, do so at their own risk.

For students who postpone their studies due to health problem, the current semester in which s/he is registered will not be counted for graduation (without penalty). For case without penalty, courses registered in the particular semester will be dropped and results verified by the Majlis Peperiksaan Universiti (MPU) (if any), will be cancelled.

Students who postpone their study due to reasons OTHER than health, the current semester in which s/he is registered will be taken into account for graduation (with penalty) unless permitted with the approval of the Vice Chancellor / Deputy Vice Chancellor (Academic and International). For cases with penalties, courses registered in the particular semester will not be dropped and will be taken into account for that semester. Results verified by the Majlis Peperiksaan Universiti (MPU) are valid and will appear in the academic transcript.

A warning letter will be issued to students who do not register for the present semester without submitting any application to postpone their studies. Student who fail to submit an application for the postponement of studies within a period of time will be terminated from the university. Their names will be dropped from the list of Registered Students and verified as having quit from the university.

Student Grading

A student's academic performance is measured using the Grade Point Average (GPA) system throughout the university academic session. A student who obtains at least a 2.00 for their GPA in a semester will be awarded the 'Active' (A) status and will be allowed to continue with

the next semester. Students are also required to obtain minimum Cumulative Grade Point Average (CGPA) of 2.00 in order to graduate.

For students who are allowed to take the Curative Course (course offered during long semester break), the examination results will be combined with their Semester 2 examination results, in order to determine the GPA and student academic status. If the combined average is better, then the student will be given a new status, but if the combined average is less than the result for Semester II, then the status of Semester 2 will be maintained

Students with GPA lower than 2.00 in a semester, will be given the Probation 1 (P1) status. The Probation 2 (P2) status is given to students with GPA lower than 2.00 for two consecutive semesters. If the GPA of the student is still lower than 2.00 for the following semester, the student will not be allowed to continue his/her studies, unless the CGPA of those students exceeded 2.00 and with the University approval. The University authorities have the right to terminate any student who does not perform and fulfil the academic requirements stated by the university.

Minimum and Maximum Period of Study

Bachelor of Engineering and Bachelor of Engineering Technology students have to complete their study within the duration given, which is a minimum 8 semesters (4 years) or the maximum 14 semesters (7 years). However, for students who are given credit exemptions, the duration given to complete their study cannot be less than 6 semesters (3 years) and not more than 12 semesters (6 years). Bachelor of Business and Bachelor of New Media Communication students should complete the programme within a minimum of 6 semesters (3 years) and a maximum of 10 semesters (5 years).

The minimum and maximum period of study are as follows:

| Programme | Minimum (Semester) | Maximum (Semester) |
|--|-----------------------|-----------------------|
| Bachelor of Engineering | 8 | 14 |
| Bachelor of Engineering Technology | 8 | 14 |
| Bachelor of Business | 6 | 10 |
| Bachelor of New Media Communication | 6 | 10 |

Curative Courses

Curative Courses are held after Semester 2. Registration for Curative Courses is very limited and depends on whether the particular course is offered by the school and is approved by the Senate. Students are only allowed to take a maximum of 10 units (3 courses) at one time. Only tutorials will be conducted for these courses. Curative course normally comprises 2 weeks of tutorials and a week of examinations.

Credit Exemption

Credit Exemption is defined as an exemption from registration and study of a course prescribed for a programme, based on the course taken by the student before being accepted into the university programme, as approved by the Dean of a School/ Dean of Academic Management.

Credit Exemption is given to students who have obtained at least a C in certain courses, according to the grading system of the University and subject to the terms and conditions set by the university. Credit Exemption is given to students who have taken a course that is the same as, or contain at least 80% similarities to a course

for which exemption is applied. Two or more courses can also be combined for the purpose of credit exemption for one course offered at UniMAP.

Credit exemption for certain courses depends on the list of courses approved by the respective School and has been approved by the Senate.

Examination and Evaluation System

Written examination is conducted at the end of the semester. Every student must fulfil the requirements for lecture, tutorial, practicum and other requirements before being eligible to sit for an exam. The duration for the exams is as follows:

Figure 7: Examination Duration

| Course Value | Examination Duration | |
|--------------|----------------------|--|
| 1 unit | 2 hours | |
| 2 – 4 units | 3 hours | |

Students' examination results are based on course work component and written examination. A course work carries the value of 100% if the entire course is lab structured. Coursework consists of assignments, lab reports and test. Students' achievement is based on letter grades and points as follows:

Figure 8: Letter grades and points

| GRADE | GRADE POINT | STATUS |
|-------|-------------|--------|
| Α | 4.00 | |
| A- | 3.75 | |
| B+ | 3.50 | DACC |
| В | 3.00 | PASS |
| B- | 2.75 | |
| C+ | 2.50 | |
| С | 2.00 | |

Sidang Akademik 2014/2015 - Academic Session 2014/2015

| GRADE POINT | STATUS |
|-------------|------------------------------|
| 1.75 | |
| 1.50 | |
| 1.00 | FAIL |
| 0.75 | |
| 0.00 | |
| | 1.75 1.50 1.00 0.75 |

The passing grade of a course is subject to the requirement of the course as follows;

- The PASSING grade for all courses is Grade C and above
- 2. The **FAILING** grade is C- to F
- 3. If students were to obtain a CGPA of ≥ 2.00 and has obtained C-/D+ in his/her Core Course, they would be considered as having **PASSED.**

Figure 9: Calculation of GPA and CGPA:

| 1.94.03. | | | | |
|--------------------------|--------------------------------------|------------------------|-----------|----------|
| COURSE | UNIT | GRADE VALUE [NG] | GRADE [G] | TOTAL NG |
| EKT121 | 3 | 3.75 | A- | 11.25 |
| EMT102 | 4 | 2.50 | C+ | 10.00 |
| EMT111 | 4 | 3.50 | B+ | 14.00 |
| EMT112 | 4 | 4.00 | Α | 16.00 |
| EQT102 | 3 | 1.75 | C- | 5.25 |
| EUT122 | 2 | 2.75 | B- | 5.50 |
| | 20 | | | 62.00 |
| GPA = 62.00/20 = 3.10 | | | | |
| ECT200 | 3 | 3.50 | B+ | 10.50 |
| EKT212 | 4 | 2.00 | C | 8.00 |
| EKT230 | 4 | 4.00 | A | 16.00 |
| EKT240 | 4 | 3.50 | B+ | 14.00 |
| EQT203 | 3 | 3.75 | A- | 11.25 |
| | 18 | | | 59.75 |
| GPA = 59.75/18 = 3.32 | | | | |
| 7 | | | | |
| Total Accumulated Uni | t 2.00 + 59.75 20 + 18 3.20 | Grade Value | / | |

In certain cases, a student might wish to apply for a revision of their examination results. Students are only allowed to appeal for a revision within the duration of 15 days after the examination results are officially released by the Registrar. Application after this duration will not be considered

Students must submit form HEA-15m (Examination Results Review Appeal Form) to the Examination & Graduation Unit, Academic Management Division, and Registry Department. The appeal form must be submitted within the period of 15 days after the official result is announced. Students will have to fill in their details in two (2) copies, one of which is the student copy.

Students will be charged RM50 per course appealed. Payment shall be made in cash or using Money Order / Pos Malaysia / Bank Draft / Cheque in the name **BENDAHARI UniMAP.**

English Language Use

Malay is the official language of the university. However English is used widely in the teaching and learning process at UniMAP. This is to help students in their career. For courses that are taught in English, the examination will be conducted in the same language.

Buddy System (Rakan Pendamping Siswa)

Buddy System (Rakan Pendamping Siswa) or RPS is a system which connects students and lecturers to allow them to discuss and decide on students' study plan. Even though course registration is done online, students are advised to meet with their RPS during the registration exercise for advisory purposes.

In the system, an academic staff supervises a small group of students for the whole duration of the students' study period in UniMAP. 'Supervision' here entails frequent meetings under informal settings, where students are able to discuss about academic and social issues with their lecturers who act as a 'buddy' to them. Students who have unsatisfactory academic performance may refer to RPS as a mentor, and the student is a 'mentee'.

Academic Support Centres

These centres are established to support UniMAP students' academic achievement.

1. School of Human Development and Technocommunication (iKOM)

School of Human Development and Technocommunication (iKOM) offers University Core Courses and various other courses, focusing on the social sciences and humanities, which complement UniMAP academic programmes. iKOM serves to enhance students' generic skills and soft skills which include communication, language, ICT and socio-humanitarian, preparing them to face the dynamic global challenges.

2. Engineering Centre

The Engineering Center was established to manage laboratories and workshops which are vitally needed for various programmes in UniMAP.

Besides managing laboratories and workshops, this centre also supports research and development activities in UniMAP and aspires to be a centre for designing and creating innovative engineering products. The Engineering Centre also offers facilities for courses which require training and technical skills, conforming to industry standards.

3. Institute of Engineering Mathematics (IMK)

The Institute of Engineering Mathematics is a centre which plans and handles engineering mathematics curriculum in UniMAP. It also serves as as a reference centre in providing expertise in mathematical research methods, simulation and statistical methods. IMK also serves as a training center for in-campus and off-campus personnel in fields related to mathematics.

4. Centre for International Languages (CIL)

The Centre for International Languages (CIL) provide language courses which are a requirement for students enrolled in all UniMAP programmes, at both diploma and undergraduate degree levels. CIL offers not only Bahasa Melayu and English but also foreign languages such as Arabic, German, Japanese, Mandarin, Korean, Russian and Thai language.

5. Co-curiculum Centre

The Co-curiculum Centre offers many co-curricular and uniform bodies courses. It is compulsory for all undergraduate students to take co-curricular courses. This centre offers up to 44 co-curricular courses for students irrespective of their academic programmes.

6. Centre for Industrial and Governmental Collaboration (CIGC)

The Centre for Industrial and Governmental Collaboration (CIGC) liaises with industrial sectors in various aspects, especially in programmes directly related to students' learning. Programmes such as exposure to industry, industrial forum, staff

industrial training and others are handled by this centre. Some of these programmes are compulsory for all students.

Academic Management Division, Registrar's Department

Academic Management Division is responsible for handling affairs related to student enrolment, data processing and student records, examinations and araduation of students and the Senate.

The units in the Academic Management Division, Registrar Department are:

1. Admissions and Student Records Unit

The Admissions and Student Records Unit is responsible for handling matters related to the admission of the students, student records and processing of data. This unit carries out the following tasks:

- Conduct the overall process of recruitment and registration of local of students at first degree and diploma level.
- ii. Conduct the process of recruitment and enrolment of international students at undergraduate level.
- iii. Manage and operate the data processing aspects of the Student Information System.
- iv. Manage students' personal records and student status, including students' application of Postponement of Studies and change of programmes.
- v. Manage students' online course registration every semester.
- vi. Manage the process of unit exemptions and credit transfer for students.

Examinations and Graduation Unit

The examination and Graduation Unit is responsible to manage and monitor the process of Final Examinations and other matters related. This unit is responsible for the following:

- Issue the Examination Circular to Schools/ Centres/Institutes.
- ii. Issue Examination Schedules for Diploma and Degree Programmes.
- iii. Manage the Final Examination during the prescribed period.
- iv. Acts as the Secretariat for the University Examination Council.
- Manage the processing of exanmination data using the Student Information System.
- vi. Issue Final Exam results.
- vii. Manage students' appeal for a review of examination results.
- viii. Issue academic transcripts after the Convocation.
- ix. Conduct the process of borrowing and returning of robes for academic staff.
- x. Review students eligibility to graduate for final year students and issue Completion of Study letter.
- xi. Responsible for the students convocation process with regard to the invitation, borrowing and returning of robes.
- xii. Manage the preparation and delivery of graduation scrolls to the graduates.
- xiii. Record and update data of graduates.

3. The Senate Unit

The Senate Unit is responsible for handling matters related to the Senate. The unit is responsible for the following:

 Plan activities of the Senate and Committee, as secretariat and coordinate with other relevant parties in offering new and existing programmes.

- ii. Provide Academic Calendar, manage the list of courses offered and deal with the Ministry of Education Malaysia (MOE) and the Public Service Department (JPA) on new programmes offered, the establishment of schools / departments and units.
- iii. Manage the nomination of Honorary Degree recipients

Faculty of Engineering Technology

Address

FACULTY OF ENGINEERING TECHNOLOGY

Universiti Malaysia Perlis (UniMAP) Engineering Centre & Innovation 1st Floor, Administration Building Pauh Putra Main Campus 02600 Arau, Perlis.

Tel: +6(04) 988 5716 / +6(04) 988 5718 Fax: +6(04) 988 5713

FACULTY OF ENGINEERING TECHNOLOGY

Universiti Malaysia Perlis (UniMAP) Uniciti Campus Sg. Chucuh Padang Besar, Perlis.

INTRODUCTION OF FACULTY OF ENGINEERING TECHNOLOGY

The Faculty of Engineering Technology (FETech)

Faculty of Engineering Technology (Eng-Tech), UniMAP is established at Universiti Malaysia Perlis in 2013. Its establishment is in line with the objectives of the Technical University in Malaysia under the Malaysian Technical University Network, (MTUN), which is to educate and train highly talented workforce to contribute to the advanced industrial countries, in addition to being a catalyst for national strategies to achieve high-income nation status.

UniMAP has begun to move towards the establishment of the Faculty of Engineering Technology since 2011 with the inception of the first engineering technology programme, namely, Bachelor of Chemical Engineering Technology (Hons) (Biotechnology Industry) under the auspices of the School of Bioprocess Engineering. In 2012, additional of four (4) new engineering technology programme under several other engineering schools has been introduced:-

- Bachelor of Mechanical Engineering Technology (Hons) (Machining) managed by the School of Manufacturing Engineering
- 2. Bachelor of Mechanical Engineering Technology (Hons) (Agriculture Systems) managed by the School of Bioprocess Engineering
- Bachelor of Electrical Engineering Technology (Hons) (Industrial Power) managed by the School of Electrical Systems Engineering
- Bachelor of Electronics Engineering Technology (Hons) (Electronic Network Design) managed by the School of Computer and Communication Engineering.

In 2013, in addition to continuing the five (5) existing engineering technology programs, the Faculty of Engineering Technology has begin to offer eight (8) another new programmes:-

- Bachelor of Chemical Engineering Technology (Hons) (Chemical Process Industry)
- 2. Bachelor of Engineering Technology in Mechanical Engineering (Hons) (Product Development)
- 3. Bachelor of Engineering Technology in Mechanical Engineering (Hons) (Material Processing)
- 4. Bachelor of Engineering Technology in Electrical Engineering (Hons) (Technology Robotic and Automation)
- 5. Bachelor of engineering Technology in Electronics Engineering (Hons) (Electronic Systems)
- 6. Bachelor of Engineering Technology in Electronics Engineering (Hons) (Integrated Electronics)
- 7. Bachelor of Engineering Technology in Electronics Engineering (Hons) (Design Telecommunications Electronics)
- 8. Bachelor of Engineering Technology in Civil Engineering (Hons) (Construction)

In 2014, 3 new programmes will be offered:-

- Bachelor of Chemical Engineering Technology (Hons) (Agrofood)
- 2. Bachelor of Mechanical Engineering Technology (Hons) (Sport Technology)
- 3. Bachelor of Engineering Technology in Civil Engineering (Hons) (Building)

Engineering Technology at UniMAP offer a unique area that bridges the existing engineering field, which focuses on the theory and design of engineering applications. Engineering technology is a field that applies the knowledge of applied mathematics and science by learning theory and practical experience in the aaplication of engineering principles through advanced

technology practices for public benefit. All engineering technology program at UniMAP employes teaching and learning in a practical oriented approach. Emphasis is practical and laboratory activities, which will be given more focus, without compromising adequate theoretical of content

In short, the differences that can be drawn between the field of engineering and engineering technology are as follow:-

- Engineering Technology programme will produce a practical engineer, able to deal with problem solving skills and the application of technology
- Teaching and learning will involve a lot of practical work in laboratory and field in addition to not deplete the theoretical content
- Research will focus on the current technology, especially related to the application of technology, the latest processing and settlement problems.

Although both engineering and engineering technology generally compete in getting the same job, the fact they actually work hand in hand with each other in a group of engineers, technical engineers engineering technology program graduates will be involved more and more to work implementing technology applications, while engineers graduate engineering programs are more focused on the design and planning of a technology.

1. Department of Chemical Engineering Technology

Description of Chemical Engineering Technology Department

Chemical Engineering Technology Department is offering two programs known as Bachelor of Chemical Engineering Technology (Industrial Biotechnology) and Chemical Engineering Technology (Industrial Chemical Process) program. Those programs are integrated into Chemical Engineering Technology education system that emphasizes on intensive practical skills besides providing adequate communication and soft skills that could equip the graduates to serve in the chemical and biotechnology-based industries.

1.1 Bachelor of Chemical Engineering Technology (Industrial Biotechnology) – RY21

Bachelor of Chemical Engineering Technology (Hons) (Industrial Biotechnology) is a program specifically designed to provide students with blended knowledge and skills in biotechnologybased disciplines such as microbiologu. fermentation technology and engineering principles for an industrial oriented profession. Those disciplines are integrated into Chemical Engineering Technology education system that emphasizes on intensive practical skills besides providing adequate communication and soft skills that could equip the graduates to serve in the biotechnology-based industries and biofuels, biopharmaceuticals, enzymes, biomaterials and bioenergy that ensure sustainability and optimization of resources used.

1.2 Bachelor of Chemical Engineering Technology (Industrial Chemical Process) – RY20

Bachelor of Chemical Engineering Technology (Hons) (Industrial Chemical Process) is a program designed to complement knowledge, application and skills in the field of chemical engineering technology such as reactor technology, upstream and downstream process and separation, and process safety. This program meets the needs and requirements of the chemical-related industries and equip the graduates with hands-on and applied skills to

serve in the chemical process industries such as oleochemical, petrochemical, polymer and oil and gas.

1.3 Bachelor of Chemical Engineering Technology (Agrofood) – RYXX

Bachelor of Chemical Engineering Technology (Hons) (Agrofood) is a program designed to provide students with knowledge and skills necessary for employment and growth in the agricultural food profession. This program offers the capacity to learn about, develop, and apply engineering sciences and technology to food, livestock, and agro-industrial production which closely aligned to market needs with a strong emphasis on application/technical skills.

Career Opportunities

Careers for Chemical Engineering Technology (Industrial Biotechnology) Program in related industries:-

- Biofuel
- Biopharmaceutical
- Enzumes
- Biomaterials
- Bioenergy

Careers for Chemical Engineering Technology (Industrial Chemical Process) Program in related industries:-

- Oleochemical
- Petrochemical
- Polymer
- Oil and gas
- Biofuel
- Biodesel
- Bioenergy
- Biopharmaceutical

Careers for Chemical Engineering Technology (Agrofood) Program in related industries:-

- Food technology
- Food quality assurance
- Food processing
- Agricultural food production
- Agricultural technology
- Agrochemical
- Natural resources

2. Department of Electronic Engineering Technology

Department of Electronic Engineering Technology is offering four (4) programme known as Bachelor of Electronics Engineering Technology (Hons) (Electronic Systems), Bachelor of Electronic Engineering Technology (Hons) (Integrated), Bachelor of Electronic Engineering Technology (Hons) (electronic Telecommunication Design) and Bachelor of Electronic Engineering Technology (Hons) (Electronic Network Design).

2.1 Bachelor of Electronic Engineering Technology (Hons) (Electronic System) – RY40

Bachelor of Electronic Engineering Technology (Hons) (Electronic System) is a programme offered under Department of Electronic Engineering Technology. The programme curriculum which is has been designed is aimed to render the needs of knowledge highly skilled engineering technologist in parallel with Malaysian National Industrial Master Plan aspiration. The programme focuses on industrial exposure, through direct involvement with the industrial sector. This four years programme emphasizes on integrated circuit (IC) design and IC fabrication with include semiconductor technology, microfabrication process technology, microelectronic reliability and failure analysis. In addition, the programme also covers semiconductor physics, Micro-Electro-Mechanical System (MEMS) as well as IC packaging.

Career Oppotunities

There is a high demand for highly skilled electronic engineering technologist in private and government sector especially in microelectronic fabrication and failure analsis. Career prospect for our graduates are very promising. Among the fields that may be ventured into bu the graduates are:-

- Semiconductor / Microelectronic Fabrication
- Mask Design
- Process and Devices Simulation
- IC Packaging
- Reverse Engineering on ICs

The graduates can look forward for career opportunities in:-

- Research and Development sector in multi-national company, local and small industries, universities and local authorities such as MIMOS and SIRIM
- Semiconductor fabrication industry where product manufacturing process requires "hands – on" expertise
- Electronics, IC Design, Factory Automation, Process, Integrated Process and Production Technologist, R&D Technologist, Executive Manager and Technical Entrepreneur

2.2 Bachelor of Engineering Technology (Hons) (Integrated Electronic) – RY44

Bachelor of Electronic Engineering Technology (Hons) (Integrated Electronic) is a programme offered under the Department of Electronic Engineering Technology. The programme curriculum which has been designed is aimed to render the needs of knowledgeable highly skilled engineering technologist in parallel with Malaysian National Industrial Master

Plan aspiration. The programme covers both full custom IC design and semi custom IC design for digital, analogue, mixed-signals systems, field programmable gate array (FPGA) applications and system on chip (SoC) desing. The programme also emphasizes on conventional electronic subjects, which include power electronic, electronic instrumentation, control systems, computer architecture and digital signal processing.

Career Opportunities

There is a high demand for highly skilled electronic engineering technologist in provate and government sector especially in IC desing, fabrication and testing. Career prospect for the graduates are very promising. Among the fields that may be ventured into by the graduates are:-

- VHDL- based Design
- Mask Design
- Process and Devices Simulation
- Application Specific ICs (ASICs) and Very Large Scale Integration (VLSI)
- Reverse Engineering on ICs

The graduates can look forward for career opportunities in:-

- Research and Development sector in multi-national company, local and small industries, universities and local authorities such as MIMOS and SIRIM
- Semiconductor fabrication industry where product manufacturing process requires "hands – on" expertise
- Electronics, IC Design, Factory Automation, Process, Integrated Process and Production Technologist, R&D Technologist, Executive Manager and Technical Entrepreneur

2.3 Bachelor of Engineering Technology (Hons) (Electronic Telecommunication Design) – RY41

The Bachelor of Engineering Technology (Hons) (electronic Telecommunication Design) is designed to prepare students for careers in the telecommunications industry as well as to address the transfer and continuing education needs of associate degree graduates in Telecommunication or other related disciplines. The programme has a sound foundation of Mathematics and Physics, provides a variety of electives in the Arts, Sciences and the Humanities and is focused on applying current engineering technology methods to the solution of technical problems.

Career Opportunities

Program graduates, known as Telecommunications technologist, are well prepared for a wide range of industry positons in the areas of telecommunications systems. Career prospect for our graduates are very promising. Among the fields that may be ventured into by the graduates are:-

- Telecommunication System and Network
- Transmission and Switching Systems
- Security in Communication Networks
- Optical and Wireless communication
- Internet Technologist
- Telecommunication Technologist

2.4 Bachelor of Electronic Engineering Technology (Hons) (Electronic Network Design) – RY43

Students of this programme are equipped with sound theoretical foundation and ample practical work to cater for the high demands of current industry where everything is now connected via electronic network. These industry-driven skills and knowledge include security design, network modelling, router administration and networking programming.

Career Opportunities

Graduates of this programme, known as network design technologist, can expect to venture a career in the computer and communication sustems area, which include but not limited to:-

- Network Analysis
- Network Security
- Internetworking
- IP Telephony
- Network Desing
- Data Systems Specialist

3. Department of Electrical Engineering Technology

Department of Electrical Engineering offers two programmes, Bachelor of Engineering Technology (Electrical) (Hons) (Industrial Power) and Bachelor of Engineering Technology (Electrical) (Hons) (Robotic and Automation)

3.1 Industrial Power (RY31)

Bachelor of Engineering Technology (Hons) (Industrial Power) is a programme offered under Department of Electrical Engineering. This programme is focuses on the needs of leading electrical engineering technologies to develop an engineer that have more practical skills and knowledge to solve the real problems at the workplace. This programme is known for quality and responsiveness to industry. In addition to a solid foundation in industrial power concepts. students will learn the most current and relevant topics for today's advanced technologies. Real world theory and applications are emphasizes throughout the in industrial power technology degree program and theory is balanced with extensive hands- on experience.

Career Opportunities

There is a high demand for highly skilled electrical engineer in private and government sector especially in maintenance, operation and electrical services. Career prospect for our graduates are very promising. Among the fields that may be ventured into by the graduates are:-

- Electrical power distribution sector
- Electronic and instrumentation sector
- Renewable energy and energy management sector
- Education sector
- Manufacturing sector

3.2 Bachelor of Electrical Engineering Technology (Hons) (Robotic and Automation Technology) (RY32)

Bachelor of Electrical Engineering Technology (Hons) (Robotic & Automation Technology) is a programme offered in UniMAP. This programme is a multi-disciplinary field that is synergistic of electrical, mechanical, electronics, control and computer engineering disciplines which enables its graduates having good theoretical and practical-oriented knowledge of integrated mechatronic systems to cater for the needs in the robotics and automation industry.

The curriculum of the programme is designed to produce graduate professionals who equipped with analytical skills and ability to work in all multidisciplinary engineering fields and industries. In addition to a solid foundation in mechatronics concepts, Engineering Technology Degree students learn the most current and relevant topics for today's advanced technologies. Additionally, the learning environment will be more enjoyable

and competitive with a good mixture between local and international students.

Career opportunities

Robotics and Automation Engineering Technology graduates in these areas will have the ability to engage in the design, research and development, consultancy, education, manufacturing, construction, maintenance, sales and management in many industries such as manufacturing, processing, automotive, aviation and shipping, mining and services, communications and building services and medical industries. Among of the firms that had offered employment opportunities to the graduates of these areas are as follows:

- Vehicle making and installation firms
- Home making appliances firms
- Electronic products firms
- Plant food processors
- Oil and gas companies
- High-tech firms
- Consultant firms
- Engineering & product development firms
- Automation system firms
- Bio-medical engineering firms
- Software development firms
- Research & development agencies
- Hospitals
- Companies, maintenance and repair firms of medical equipment
- Companies, marketing and sale firms of medical equipment
- Manufacturing industry of medical instrumentation
- Education and training (universities, polytechnics and colleges)

4. Department of Mechanical Engineering

Technology

Mechanical Engineering technology activities include the application, testing, manufacturing, field services engineering as well as development and utilisation of latest mechanical and production of tools, machines as well as their products. Hence, this department is committed to prepare the students for a wide range of technological challenges in this exciting field through highest-quality educational programmes. The primary goal is to provide students with a solid technical foundation which enable to readily adaprt to a wide variety of careers within the existing engineering field.

Careers Opportunities

The degree programme in mechanical engineering technology prepares graduates for various possible in manufacturing, sport technology, agricultural and other technical industries which include:-

- Production or process engineer / technologist
- Product engineer / technologist
- Service engineers / technologist
- Quality engineer / technologist
- R & D engineer / technologist
- Agra-based production engineer / technologist
- Agro-based SM / R & D
- Agra-based sales / technical services
- Maintenance and service indudtries
- Electronic packaging / metal / polymer / materials processing industries
- Automotive industries

This department offers four (4) exciting Mechanical engineering Techology degree programmes, namely:-

4.1 Mechanical Engineering Technology

(Machining) - RY55

This programme prepare the workforces who are productive, innovative, creative and well verse with the state-of-the art technology related to mechanical engineering technology. In essence, the programme curricular is designed to lead towards practical needs so as to produce highlu skilled graduates in the field of engineering and technology that meet the recent industrial requirement and other sectors concerned. In particular, this programme emphasises on the applications or utilisations of related knowledge and skills within the spectrum of mechanical and machining technology fields. This includes material and metal cutting technology, management of technology and sustainability. In addition, the required university course allow the students to enchance their communication and thinking skills, as well as ethical elements of professionalism in their careers.

4.2 Mechanical Engineering Technology (Agricultural Systems) – RY56

The programme aims to generate engineering technologist who are competent and posses a sound and balanced skill in integrating biological engineering and management principles. The course are delivered based on practical approach that covers basic and applied engineering principles of economics and business management in the agricultural and related industries. The students are also exposed to agra-industrial know-how through courses and skills that are applicable in many related industries. The final semester of the programme is dedicated to the industrial training activitiy attaching the students to relevant industries mainly to enchance their capability and skill in accordance to the market needs

4.3 Mechanical Engineering Technology (Product

Development) - RY57

The objectives of this programme is to produce highly skilled graduates that possess solid foundation knowledge in the general field of mechanical engineering technology and in the areas of product development particularly. The programme has been designed in a holistic manner to provide students with a blend of theoretical knowledge, industrial artistic and technical skills in the discipline of technologybased product development in line with the requirements of the mechanical engineering industry. Therefore, it would help in producing engineering technologist who are responsible in appluinh, preparina, maintainina and development products in all aspects to modern mechanical engineering technology.

4.4 Mechanical Engineering Technology (Material Processing Technology) – RY58

The objective of this programme is to produce graduates who are skilled, competitive and have a strong knowledge based in the field of materials processing engineering technology. Graduates will have the capability to demonstrate as a knowledge and talented engineering technologist in problem solving skills, in addition to materials processing, characterization and testing in materials processing technology field.

The course are delivered based on practical approach that covers four main fields which is metal processing, polymer processing, electronic packaging and ceramic processing as well as principles in economics and management. The programme has been designed to cultivate materials engineering technologist who are committed to the important of life-long learning and continuous improvement. Hence,

upholding the importance of professionalism and ethics of material processing profession to form a cultured and more developed societu.

4.5 Mechanical Engineering Technology (Sports Technology) – RYXX

The objective of this programme is to produce highly skilled engineering technologist capable providing knowledge-based practical engineering services to the sports, sports science, and exercise and rehabilitation industries. Also, to produce graduates, as sports engineering technologist, who are capable of making a contribution to society and the community. This programme focuses primarily upon the design and test of sports equipment and product to enhance athlete performance by providing a detailed understanding of human performance, sport related business studies and product design principles. It has been specifically developed to provide the sports industry with graduates possessing the required specialist technological knowledge and skills.

Career Opportunities

Graduates can seek employment in sporting organisations and institutes, orthopaedic and industrial design companies and can work together with scientists, coaches, athletes, the disables, sporting goods manufacturers, venue managers and other engineers.

Within these organisations and individuals, the sports engineering technologists will have the skills to develop equipment and facilities used by sportspersons including designing sporting goods, rehabilitation devices, apparel, computer simulation

models and infrastructure that will improve and enhance athletic performance.

However, being based on a mechanical engineering technology degree, graduates will retain flexibility in the choice of engineering industry for their careers. In most cases graduates will also be able to work wherever mechanical engineering technologists are employed.

Department of Civil Engineering Technology

Currently, Department of Civil Engineering Technology offers one (1) degree programme namely Bachelor of Civil Engineering Technology (Hons) (Constructuion). This programme will be offered under auspices of School of Environemtal Engineering located at Kompleks Pusat Pengajian Jejawi 3, Jejawi, Arau, Perlis.

5.1 Civil Engineering Technology (Construction) – RY11

This programme is design to equip students with the essential knowledge and skill needed to enter careers in construction, operation, maintenance of the built environment and global insfrastructure. Therefore, the graduate of this programme will have skills in the construction, testing, operation and maintenance of building and infrastructure. They also will have the ability to utilize basic construction documents to participate in construction activities.

5.2 Bachelor of Civil Engineering Technology (Building) - RYXX

This programme is design o produce graduate which has expertise theoretically and practical in areas of technology building construction. It is also design to to produce graduate with

technical expertise and where knowledge engineering technology they will be able to apply according to demand current market and able to expand their knowledge through own learning continuously. They also will have the ability to use entrepreneurial skills especially in construction field.

Career Opportunities

Employment prospects and the career of the graduates are broad because this programme combines the necessary skills in three important fields: Construction Management, Engineering and Entrepreneurship. These skills are necessary to successfully manage construction projects. In our programme, students learn how to build projects, prepare construction estimates, generate project schedules, handle field opearions, administer construction contracts, use surveying equipment, perform structural design (wood, concrete and steel structures), understand accounting principles, determine economical feasibility and communicate with others effectively. These skills position our students to succeed employments as:-

- Contractor
- Developer
- Survey Contractor
- Construction Inspector
- Material Tester
- Building Inspector
- Estimator
- Sales Engineer
- Installation Supervisor
- Quality Control Supervisor
- Structural Detailer
- Project Coordinator / Manager

Bachelor of Civil

Engineering Technology (Construction)

PEO Bachelor of Civil Engineering Technology (Construction)

PFO 1

Graduates who are practically expertise in construction technology field

PEO 2

Graduates who have technical skill and construction engineering technology knowledge where they can apply according to current market

PEO 3

Graduates who are able to expand their construction engineering technology knowledge through continuous self learning

PEO 4

Graduates who demonstrate entrepreneurial skills in construction.

PO Bachelor of Civil Engineering Technology (Construction)

PO 1

Ability to apply knowledge of mathematics, science, engineering fundamental and an engineering specialisation principles to defined and applied engineering procedures, processes, systems or methodologies;

PO 2

Ability to solve broadly-defined engineering problems systematically to reach substantiated conclusions, using tools and techniques appropriate to their discipline or area of specialisation;

PO 3

Ability to design solutions for broadlydefined construction engineering technology problems, and to design systems, components or processes to meet specified needs with appropriate consideration for public health safety, as well as cultural, societal, environmental and sustainability concerns;

PO 4

Ability to plan and conduct experimental investigations for broadly-defined problems, using data from relevant sources;

PO 5

Ability to select and apply appropriate techniques, resources and modern engineering tools, with an understanding of their limitations:

PO 6

Ability to function effectively as individuals, and as members or leaders in diverse technical teams;

PO 7

Ability to communicate effectively with the engineering community and society at large;

PO8

Ability to demonstrate an awareness of and consideration for societal. Health, safety, legal and cultural issues and their consequent responsibilities;

PO 9

Ability to demonstrate an understanding of professional ethics, responsibilities and norms of construction engineering technology practices;

PO 10

Ability to demonstrate an understanding of the impact of construction engineering practices, taking into account the need for sustainable development;

PO 11

Ability to understand awareness of management, business practices and entrepreneurship in construction engineering technology; and

PO 12

Ability to recognise the need for professional development and to engage in independent and lifelong learning.

Elective Courses:

Elective 1: PAT 308/3 Financial and Human Resources Management / PAT 309/3 Building Survey
Elective 2: PAT 358/3Construction Technology of Highway and Bridge / PAT 359/3 Construction Risk Management
Elective 3: PAT 408/3Advanced Structure Design / PAT 409/3Higrise Buiding Technology

Course Syllabus for Civil Engineering Technology (Construction) Programme

YEAR 1

PAT 101/2 FUNDAMENTAL OF ENGINEERING MECHANICS

Course Synopsis

The aim of this course is to enable the students to learn the Fundamentals of engineering mechanics. In engineering mechanics portion, students will be introduced to fundamentals and principles of static and dunamics mechanics. Resultant and equilibrium of coplanar force system as well as spatial force system will be covered in static portion while kinematics of particle in dynamics potion. In material engineering portion, the student will be also taught on structure of crystalline solids and strength of material

Course Outcome

- **CO1:** Ability to explain basic concept of force vector and solve problem related toforce vector.
- CO2: Ability to construct free body diagram and ability to solve problem related to equilibrium of rigid body.

- **CO3:** Ability to solve problems related to kinematics of a particle.
- CO4: Ability to explain basic concepts of material strength as well as their mechanic properties

List of experiments

Lab 1: Equilibrium of beam

Lab 2: Tensile test

Lab 3: Rockwell Hardness Test

PAT 102/3 PHYSIC TECHNOLOGY

Course Synopsis

This course aims to teach students on understanding basic concept on physics towards technology and its applications especially in engineering. At the end of this course students must be able to calculate and solve basic physics problems that related to heat, lighting, electricity, magnetism and acoustics. The students must also be able to demonstrate the theory and its applications.

List of experiments

Lab 1: Lightings

Lab 2: Magnetisms Lab 3: Acoustic

Lab 4: Electricitu

Course Outcome

- **CO1:** Ability to explain fundamental physics concepts in technology.
- **CO2:** Ability to solve basic physics calculation and formula.
- **CO3:** Ability to apply concepts of physics in technology through understanding in lab experiments.
- **CO4:** Ability to evaluate overall important physics phenomena related to building services.

PAT 103/2 INTRODUCTION TO CIVIL ENGINEERING TECHNOLOGY

Course Synopsis

This course provides further discussion and explanation related to role of civil engineering technology in society, unit systems and their applications, solutions of engineering problems, and use of computer software in civil engineering problems.

Course Outcome

- **CO1:** Ability to evaluate the role of civil engineering technology in societu.
- **CO2:** Ability to estimate using unit systems and analyze their applications in engineering problems.
- **CO3:** Ability to analyze solutions for engineering problems by algebra and trigonometry principles.
- **CO4:** Ability to evaluate computer software in civil engineering problems.

PAT 104/2 TECHNICAL DRAWING 1

Course Synopsis

The aim of this course is to enable the students to understand the basic concept in the civil engineering drawing. This includes Introduction to Graphics Communication, manual drawing techniques in civil engineering and Isometric drawings. Other concept of drawing also includes such as Multiviews Drawing, Pictorial Projections, Section Views and Dimensioning and Tolerancing Practices.

Course Outcome

- **CO1:** Ability to understand graphic communication and geometry in civil engineering.
- **CO2:** Ability to understand and sketch multiview and Auxiliary drawing concept.
- **CO3:** Ability to understand and define axonometric, isometric, dimetric, and trimetric projection.
- **CO4:** Ability to understand concept of section view and dimensioning and tolerance practices.

Studio Works

 Introduction to basics engineering drawings

- 2. Manual drawing techniques in civil engineering
- 3. Isometric drawings
- 4. Contours, earthwork cut and fills
- 5. Architectural, Mechanical & Electrical Drawings
- 6. Civil and structural engineering Drawings
- 7. Water and Sanitary Installation Drawings
- 8. Road and Drainage Drawings
- 9. Reinforced Concrete Detailing

PAT 151/3 BASIC SOLID MECHANICS

Course Synopsis

This course will be focused on basic principles and terminologu of solid mechanics which begins with the concept of stress and strain, mechanical behaviour of engineering materials, methods to solve important tupes of solid mechanics problems and ability to apply this knowledge for solution of simple problems of practical importance. The important mechanical properties of materials and separate treatments of axial load, torsion, and bending are also discussed. The transverse shear along with a discussion on the state of stress results from combined loadings will be covered in this course, as well as the concepts for transforming multiaxial states of stress and in similar manner, the methods for strain transformation. For a further summary, student will be taught the applications of beams and shaft that cover on the design and deflection parts. Besides that the buckling of column also will be exposed to the student.

Course Outcome

CO1: Ability to determine the stresses, strains and deformation of members in simple one-dimensional elastic system.

- **CO2:** Ability to evaluate the values and distribution of bending and shear stresses in beam section.
- CO3: Ability to construct Mohr's Circle to calculate the principle stresses, maximum shear stresses, and stresses on inclined planes.
- **CO4:** Ability to solve for the support reactions on a beam that is statically indeterminate and deduce the buckling load of columns with various types of support.

List of experiments

- 1. Tensile test
- 2. Torsion
- 3. Bending moment
- 4. Shear force
- 5. Beam
- 6. Strut Buckling
- 7 Rockwell Hardness Test

- R.C Hibbeler' "Mechanics of Materials", 7th Ed, Prentice Hall, 2008.

E. Popov., "Mechanics of materials", Prentice Hall, 1983.

PAT 152/3 FLUID MECHANICS

Course Synopsis

This course provides student knowledge in the patterns of movement of fluid particles. Bu the end of this subject student will be expected to understand the basic characteristics of fluid mechanics and fluid statics, be able to analyze the hydrostatics and basic hudrodunamics in fluid. Student also will be able to analyze and differentiate between the flow in pipe and flow in open channels. In this subject, student will be introduced to the Darcy-Weisbach equation, Moody diagram, Energy losses in pipelines, Minor losses and analysis multiple pipe systems.

Course Outcome

- CO1: Ability to understand and analyze the basic characteristics of fluid mechanics and fluid statics
- CO2: Ability to analyze the hydrostatics and basic hydrodynamics in fluid
- **CO3:** Ability to analyze the flow in pipe and flow in open channels
- **CO4:** Ability to analyze pipe flow system

PAT 153/3 GEOMATIC

Course Synopsis

In this course student will be introduce basic surveying involved in engineering. Starting from linear measurement on plane. Student will do leveling after they learn 2 different data logging. With their knowledge in tapping and leveling, they have to do traversing and tachymetry. Lastly, student will be test in real work, in geomatic camp.

Course Outcome

- CO1: Ability to analyze Linear
 Measurement (Taping or
 Chainning) and Electronic
 Distance Measurement (EDM)
 method.
- **CO2:** Ability to evaluate using Levelling method.
- **CO3:** Ability to evaluate Angle Measurement and using Traversing method.
- **CO4:** Ability to evaluate using Tacheometry.
- **CO5:** Ability to evaluate using Cut and Fill method.

List of experiments

- Distance Measurement and Bearing
- 2. Levelling Work (Collimation and Rise & Fall Method)
- 3. Traversing With Compass and Theodolite
- 4. Tacheometry
- Electronic Distance
 Measurement (EDM) With Total
 Station
- 6. Geomatic Camp

- Barry Kavanagh, Surveying Principles and Applications. Pearson. (2009).

- 5. Kavanagh, B.F." Geomatic" Prentice Hall, 2003

PAT 154/3 CONSTRUCTION DRAWING

Course Synopsis

The course equips students with the basic computer-aided drawing skill for general engineering drawing and especially for civil engineering profession. This includes plan, cross section drawing and structural detailing. Through lectures, students will learn the basic characteristics of professional civil engineering drawing. Through hand-on sessions using drawing software packages, this course enables the students to have first hand practice on the drawing for some idealized and actual projects. Moreover, students will learn about bill of quantity through construction drawings.

Course Outcome

- **CO1:** Ability to understand and construct CAD of architectural, mechanical and electrical symbols.
- CO2: Ability to understand and construct CAD of Civil and Structural Engineering drawings.

- **CO3:** Ability to analyze and design structural components using design software.
- **CO4:** Ability to predict bill of quantity that used in tendering in construction industry.

STUDIO WORKS

- 1. Architectural, Mechanical & Electrical Drawings.
- 2. Civil and structural engineering Drawing.
- 3. Introduction to Computer Aided Drafting
- 4. CAD of Architectural, Mechanical and Electrical Drawings
- 5. CAD of Civil and Structural Engineering Drawings
- 6. CAD of Water and Sanitary Installation Drawings
- 7. CAD of Road and Drainage Drawings

YEAR 2

PAT 201/2 STRUCTURE THEORY

Course Synopsis

This course provides students with a clear and through presentation of the theory and application of structural analysis as it applies to beams, trusses and frames. It introduces analysis of statically determinate structures for beams, trusses and frames. Besides that, It also introduces deformations analysis of statically determinate structures using virtual work method for trusses, beams, and frames.

Course Outcome

- **CO1:** Ability to calculate internal member forces for determinate structural systems.
- **CO2:** Ability to illustrate internal member forces diagram for determinate structural systems.

CO4: Ability to sketch deformations for determinate structural systems.

PAT 202/3 HYDRAULIC AND HYDROLOGY

Course Synopsis

This course provides student knowledge in Uniform Flow; Chezy equation, Ganguillet-Kutter, Bazin and Manning. Student will be able to understand Open Design Channel and Energy and Momentum Principle. Student also will be able to differentiate between laminar flow and turbulent flow and to understand the theory of transportation of sediment.

Course Outcome

- CO1: Ability to understand the Chezy equation, Ganguillet-Kutter, Bazin and Manning and to analyze open design channel: cannot erode
- **CO2:** Ability to analyze the Energy and Momentum Principle
- CO3: Ability to differentiate between laminar and Turbulent Flow
- **CO4:** Ability to understand theory of sedimentation and analyze open channel design: erode

PAT203/2 SOIL MECHANICS

Course Synopsis

The course introduces the students with the basic and background of the properties and behavior of soil deposits and the applications of soil mechanics theory. It includes brief introduction on geological and physical characteristics of soils. Also includes identification, classification and description of rock and soil for engineering purposes. Application of mechanics on soil such as phase relationship, compaction, permeability and seepage, stresses and effective stresses, shear strenath and consolidation are also covered.

Course Outcome

- **CO1:** Ability to identify, classify and differentiate the different types of soil and rock including their properties.
- **CO2:** Ability to discuss the seepage and permeability concept and solve problem involving flow nets.

- **CO4:** Ability to employ the shear strength theory to determine shear strength parameters of soils.
- **CO5:** Ability to explain the process of consolidation and solving problems using one-dimensional consolidation theory.

LABS

- (i) Rock Identifications
- (ii) Sieve and Hydrometer Analysis
- (iii) Liquid Limit and Plastic Limit Test
- (iv) Constant Head Permeability
 Test
- (v) Standard Proctor Compaction Test

EAT204/3 CONSTRUCTION MATERIALS

Course Synopsis

This course provides an introductory overview of the various materials used in construction. After receiving an introduction into fundamental principles of structural, physical and long-term performance, students learn about material and product manufacturing techniques and how they relate to mechanical and non-mechanical properties of the various materials. Common construction methods are introduced and building details are explored.

Course Outcome

- CO1: Ability to COMPARE and IDENTIFY material properties (physical, structural) for most common and advanced building materials,
- CO2: Ability to IDENTIFY and UNDERSTANDING the typical and potential applications of building materials.
- CO3: Ability to IDENTIFY crucial problem areas in manufacture and applications of building materials.

PAT205/3 BUILDING SERVICES I

Course Synopsis

An overview on overall building facilities and understanding towards its functionalities in building is the

main objectives in this course.
Students must be able to explain
the function of building services
and how it's important to a building.
Student also need to produce a
simple mechanical and electrical
design that always been expected
from a Building Technologist.

Course Outcome

CO1: Ability to understand the building facilities systems in modern buildings and problems related to design, operation and maintenance.

CO2: Ability to calculate fundamental design related to building facilities for an application.

PAT251/2 SRUCTURAL ANALYSIS

Course Synopsis

This course provides students with a clear and through presentation of the theory and application of structural analysis as it applies to beams, trusses and frames. It introduces analysis of statically indeterminate structures for beams, trusses and frames. Two method are introduces in this analysis of statically indeterminate structures using method of consistent deformations and moment distribution.

Course Outcome

- **CO1:** Ability to identify redundant forces for indeterminate structural systems.
- **CO2:** Ability to determine member forces for indeterminate structural systems.
- **CO3:** Ability to illustrate internal member forces diagram for indeterminate structural systems.

List of experiments

Lab 1: Trusses System

- Forces in truss
 - o Statically Determinate System
 - o Statically Indeterminate System

Deflection of trusses

Lab 2: Beam

- Forces in beam
 - Statically Determinate System
 - o Statically Indeterminate System
- Deflection of beam

Lab 3: Portal frame

- Forces in frame
 - Statically Determinate System
 - o Statically Indeterminate System

PAT252/3 CONSTRUCTION PROJECT MANAGEMENT

Course Synopsis

This course aims to teach students on how to apply the project management skills throughout overall project life cycle. The role of engineering management is to assess the appropriateness of a given project, estimate its value, and justify it from an engineering standpoint. At the end of the course, students will be able to identify and discuss issues and challenges faced by engineers relating to project management in project life cycle.

Course Outcome

- co1: Ability to analyze and evaluate the process of project management, develop work plans, do cost estimation and perform project evaluation
- CO2: Ability to perform project management activities and to solve issues in site construction.

PAT253/2 GEOTECHNIC

Course Synopsis

This course provides further discussion and explanation related to soil engineering. The topics cover in this course includes site investigation, bearing capacity and design of shallow foundation and pile foundation, lateral earth pressure, and slope stability. At the end of the course, students should be able to apply theory and practical to solve problem related to geotechnical engineering.

Course Outcome

CO1: Ability to discuss issues in geotechnical engineering and explain site investigation methods.

- CO2: Ability to analyze soil bearing capacity and design for shallow foundations and pile foundations.
- **CO3:** Ability to analyze active and passive pressure according to Rankine's and Coulomb's theories.
- **CO4:** Ability to analyze the stability of the slope in term of factor of safety.

Labs

- L. JKR / McKintosh Probe Test
- One dimensional Consolidation test
- 3. Triaxial test

PAT254/3 CONSTRUCTION VALUE ESTIMATION

Course Synopsis

This course involve with quantity survey which is an important part in construction field. In this course student will be taught on the method used in estimating cost for construction material and how to evaluate construction cost based on Standard Method of Measurement issued by Public Work Department (JKR).

Course Outcomes

- **CO1:** Ability to explain fundamental concept of quantity surveying
- CO2: Ability to classify type and method in quantity surveying work
- CO3: Ability to estimate value construction based on Standard Method of measurement issued by Public Work Department (JKR)

PAT255/3 BUILDING SERVICES II

Course Synopsis

To highlight the importance of information and all building facilities such communication systems, electrical distribution system, building automation systems and public addressing systems in modern buildings. To summarize the understanding on mechanical services in building and ability to explains the operations and functionality of each service. Both services need to understand in a manner that considering energy efficiency spirit throughout building life cycles.

Course Outcome

CO1: Ability to understand the electrical distribution systems in modern buildings and problems related to design, operation and maintenance.

CO2: Ability to discuss, appreciates, and summarizes majority existing definitions of buildings terminologies and explains towards sustainability in building.

PAT256/2 OCCUPATIONAL SAFETY AND HEALTH MANAGEMENT

Course Synopsis

Students will be exposed to Malaysian related laws and regulations on occupational safety and health (e.g. OSHA 1994) and environment (e.g. EQA 1974) and how to interpret the requirements stipulated under these documents. This course will also provide students the necessary information in identifying hazards, assessment and managing the risks that may be harmful to humans in the workplace.

Course Outcome

- **CO1:** Ability to comprehend and explain the legal requirement of environmental, safety and health laws and regulations.
- **CO2:** Ability to describe and evaluate hazards in the workplace.
- **CO3:** Ability to describe and evaluate the magnitude of risks on humans associated with the hazards in the workplace.
- **CO4:** Ability to outline the management plan in managing the hazards and risks in the work place.

YEAR 3

PAT 301/4 STRUCTURAL DESIGN 1

Course Synopsis

The course is designed to provide the student with a basic understanding of the behavior of reinforced concrete members and structures; to provide a basic understanding of standards methods of analysis and design of reinforced concrete building. This course covers the design load, design member, reinforced concrete design, foundation and retaining walls. The basic design of steel structures. Stretching member, column and beams. Properties and structural steel members

Course Outcome

CO1: Ability to identify physical properties of concrete materials; defined concrete proportions and testing; justify selection of concrete materials and mix proportion.

- CO2: Ability to design concrete structures based on the British Standard BS 8110
- **CO3:** Ability to describe basic concept of steel members, connections and structures behavior.
- **CO4:** Ability to design steel structures elements based on the British Standard BS 5950

List of experiments

Lab 1: Properties of cement
Lab 2: Properties of aggregate
Lab 3: Concrete mix design and test
on wet concrete
Lab 4: Reinforcement properties

Lab 5: Concrete properties

Course Synopsis

Construction Technology I is an instructional program that prepares an individual for employment or continued education in the occupations of Carpentry, Electrical Wiring, Masonry, or Plumbing. It is a basic course teaching fundamentals of safety, tools, math, and basic carpentry, electrical, masonry, and plumbing skills.

Course Outcome

- **CO1:** Explain safety practices and procedures
- **CO2:** Ability to identify use of tools and equipment and estimate materials from blueprints
- CO3: Ability to explain about carpentry and electrical wiring tools and the scope of work
- CO4: Ability to explain about masonry and plumbing tools and the scope of work

PAT303/3 HIGHWAY AND TRAFFIC TECHNOLOGY

Course Synopsis

The course introduces the students with the basic and background of the traffic road and highway technology. The sub-topics discussed are characteristics of drivers, pedestrians, vehicles and road, fundamentals of traffic light, traffic flow, including volume, speed and density, traffic engineering studies, geometric design of road, two and multi-lanes highway. Students will be taught briefly on materials related to asphalt, bitumen and concrete, flexible and rigid pavements.

Course Outcome

CO1: Ability to understand traffic flow fundamentals and relationship between volume, speed and density.

- CO2: Ability to understand the transportation planning process, forecast travel demand and design highway drainage structures
- **CO3:** Ability to discuss the flexible pavement includes the methods of pavement design
- **CO4:** Ability to discuss the Rigid pavement includes the methods of pavement design

List of Experiments

- . Marshall Test
- ii. Penetration Test
- iii. Softening Point Test
- iv. Extraction of Bitumen from Bituminous Mixture
- v. Sieve Analysis of Extracted Aggregate
- vi. Capacity of Unsignalised Intersections

PAT304/2 CONTRACT AND SITE ADMINISTRATION

Course Synopsis

The administration of a project including award of the contract, progress claims, instructions, variations, rise and fall calculations, certificates, claims, cash flow and dispute resolution. Conditions of standard form of domestic and international building contract. Develop the company safety program and hazard communication program.

Course Outcome

- **CO1:** Ability to analyze and compare the major types of contracts commonly adopted in the construction industru.
- **CO2:** Ability to prepare and analyze the use of various construction documents and the administrative process.
- **CO3:** Ability to decide the construction documents provided by a construction

- manager including the practice of value engineering & constructability.
- **CO4:** Ability to recommend the principles of quality and safety management systems.

PAT 308/3 FINANCIAL AND HUMAN RESOURCES MANAGEMENT

Course Synopsis

This course aims to provide the students' knowledge on how to apply the financial management skills and economic techniques

in evaluating the cost of overall project. The role of engineering economics is to assess the appropriateness of a given project. estimate its value, and justify it from a technologist standpoint. At the end of the course, students will be able to identify and discuss issues and challenges faced by engineers relating to financial management in the current economic scenarios. The syllabus comprises scope management including project authorization, scope definition, personnel control, human resources management and finalization. Cost management including project costing, resource planning, budgeting and controlling financial completion are also emphasized. In addition, this course will also expose students to the time management including activity sequencing, duration estimating, scheduling, progress control, monitoring and forecasting.

Course Outcome

- **CO1:** Ability to discuss and describe the general project management
- CO2: Ability to describe three major components in project management (planning, execution and project evaluation)
- co3: Ability to use project planning and scheduling technique available in construction management

CO4: Ability to analyze the project cash flow requirements, project monitoring, and control

PAT 309/3 BUILDING SURVEY

Course Synopsis

The subject is to provide a structural survey, equipment required and information required for surveying of building on site. This include recording of data, preparation and presentation of reports, and legal obligations of a Building Surveyor. The subject is designed to provide to

a rigorous training to students with professional recognition in the specific field of Building Surveying. The professional Building Surveyor will play the major role as consultants in planning for maintenance of public and privately owned buildings to optimise their uses, safety and value thus, safeguarding the interest of the owners and the public.

Course Outcome

- **CO1:** Ability to understand and identify structural survey, equipment and information required.
- CO2: Ability to compare, discuss, and identify type of survey on site, method uses, recording data, preparation and presentation of reports and legal obligation of a Build
- CO3: Ability to identify and evaluate and understand the identification of cause and defect in building structures, finishes and services and remedial action temporary supporting works. ing Suryevor.

PAT 351/3 STRUCTURAL DESIGN 2

Course Synopsis

The aim of this course is to introduce students to the fundamental principles about the structural behaviour and design criteria of Prestressed Concrete Structures and Timber Design. This course delivers knowledge and understanding of the principles of prestressed concrete, pertaining to both its analysis and design aspects. This course also introduces students to timber and masonry as structural member. Student will be able to design timber joint using nail and other mechanical fasteners. design unreinforced and reinforced masonry structural elements and structures.

Course Outcome

CO1: Ability to identify the key aspects of design and material requirements for prestressed concrete.

CO3: Ability to describe basic concept of timber members, connections and structures behavior.

CO4: Ability to design timber structures elements.

PAT 353/3 ENVIRONMENTAL MANAGEMENT

Course Synopsis

This course focuses on principal elements of environmental management, including **Environmental Management** System (EMS) and ISO 14000. Other important parts that will be taught are Environmental Impact Assessment (EIA) and Environmental Management Plan (EMP). Both portions deal with the utilization of a common resource that is environment, and complied with the regulations and guidelines of Department of Environment for the project activity. Students will be also introduced to the measurement & calibration systems in environmental management, and learn the quantitative risk assessment

Course Outcome

- **CO1:** Ability to describe the requirements in implementing an ISO 14001, as well as EMS costing and audits
- CO2: Ability to describe and outline the EIA process & methods in Malaysia
- **CO3:** Ability to identify and describe the measuring instruments and calibration systems in environmental management.

CO4: Ability to identify and explain the quantitative risk assessment

PAT 352/3 CONSTRUCTION TECHNOLOGY 2

Course Synopsis

Construction Technology II is an instructional program that prepares an individual for employment or continued education in the occupation of Carpentry. Construction Technology II is a continuation of Construction Technology 1 and provides advanced instruction and practical applications in the Carpentry area.

Course Outcome

- **CO1:** Explain the history of trade and apprentice program
- **CO2:** Explain floor system and building materials.
- **CO3:** Ability to explain about carpentry and electrical wiring tools and the scope of work in advanced.
- CO4: Ability to explain about masonry and plumbing tools and the scope of work in advanced.

PAT 358/3 CONSTRUCTION TECHNOLOGY OF HIGHWAY AND BRIDGE

Course Synopsis

This course introduces the advance knowledge of highway technology including highway location, design and traffic system. Earthwork is also considered as sub-topics in this course apart from types of pavement, design, rehabilitation, culverts and drainage system. Course also covered the fundamental of bridge technology including conceptual of bridge design, superstructure, substructure, construction and maintenances of bridge.

Course Outcome

CO1: Ability to understand the transportation development process and earthwork for highway constructions and design

- CO2: Ability to explain and analyze flexible and rigid pavement design
- **CO3:** Ability to discuss the fundamental of bridge and bridge superstructure
- CO4: Ability to explain the bridge substructure, bridge construction and its maintenance aspect

- Roger L.Brockenbrough Kenneth J.Boedecker, Jr.," HIGHWAY ENGINEERING HANDBOOK", McGraw-Hill,2004.

PAT 359/3 CONSTRUCTION RISK MANAGEMENT

Course Synopsis

This course introduces the concepts and principles of risk management in construction industry. Students will be exposed to the risks management and how to manage the risks during construction process. This course also covered risk in development projects, risk analysis and identification, risk assessment and risk reduction in construction.

Course Outcome

- **CO1:** Ability to understand and describe the definition of risk management, objectives of risk management and risk management process.
- co2: Ability to explain and analyze risk in development projects including risk management, risk of damage to the project and risks to the people
- **CO3:** Ability to discuss the risk assessment, risk analysis and risk identification.
- **CO4:** Ability to explain the risk reduction in construction stage including strategic planning and risk transfer.

YEAR 4

PAT401/3 INDUTRALIZED BUILDING SYSTEM CONSTRUCTION TECHNOLOGY

Course Synopsis

This course is designed to expose students to the concepts of IBS which includes the advantages and disadvantages using IBS in Construction, Roadmap of IBS and the usage of IBS. It also highlighted the concept of Score Calculation

and submission, Principal of
Modular Coordination in IBS and
concepts of buildibility. Joints and
tolerances will also be discussed.
Enhancement through mini project
and hands-on project will be done to
further strengthen their knowledge
on subject matter.

Course Outcome

- **CO1:** Ability to classify the concept of IBS modern construction technologu.
- **C02:** Ability to evaluate the Principle of Score calculation and its submissions.
- **CO3:** Ability to decide Concept of Modular Coordination in IBS, Joints and Tolerances.
- **CO4:** Ability to discuss precast concrete building element.

PAT402/3 CONSTRUCTION TECHNOLOGY INTEGRATED PROJECT

Course Synopsis

In this course, student will work in group of five to solve a construction related project. This given project task is a capstone project. All the knowledge and practical skill like design, construction method, construction material, project management and so on, that they have gain from three years study in this program will be used in this course to accomplish the given project. At the end of the course, students, project proposal will be evaluate by experienced construction industry practitioner

Course Outcomes

- **CO1:** Ability to work in group effectively to accomplish a design project
- **CO2:** Ability to propose design with the best construction method and the most effective cost and management
- **CO3:** Ability to use effective communication skill and professional ethic

PAT408/3 ADVANCED STRUCTURAL DESIGN

Course Synopsis

This course is an extension of the structural design 1 and structural design 2. Student will be taught to design special civil engineering structures like water retaining structure, earth retaining structure, substructure and pre-stressed concrete structure. Since this course is an elective course, students who have interest in structural design are encouraged to choose this subject.

Course Outcomes

CO1: Ability to design earth retaining structures

CO2: Ability to design water retaining structure

CO3: Ability to design substructure CO4: Ability to design pre-stressed concrete structure

PAT409/3 CONSTRUCTION TECHNOLOGY OF HIGHRISE BUILDING

Course Synopsis

This course is an introduction to the construction technology used to build highrise building. Besides that, this course also will touch on the best and new practices being used during construction to protect public and to mitigate overhead hazard. Analysis of highrise building also will be taught in this course.

Course Outcomes

- **CO1:** Ability to determine type and function of each construction technology used to build highrise building
- **CO2:** Ability to comprehend type and function of highrise building systems
- **CO3:** Ability to identify and mitigate hazard during highrise construction
- **CO4:** Ability to carry out structure analysis on the highrise building

PAT 454/3 FINAL YEAR PROJECT I

Course Synopsis

This an individual research project in connection with a special engineering problem and under the guidance of an academic staff. The project undertaken may fall under one of the following areas: Mathematical analysis, experimental tests, computer simulation, hardware and/software development, to their field of interest. At the end of the project, each student prepares an engineering report, presents and demonstrates findings and results of the project work.

Course Outcomes

- CO1: Ability to modulate and utilize academic knowledge and practical experience in conducting an academic project.
- CO2: Ability to think objectively, analytically and critically in identifying and solving problem in systematic manner. Ability to create innovative/commercialization
- **CO3:** Ability to work independently in conducting and completing an academic project.
- **CO4:** Ability to present the proposal and final product orally and graphically.

PAT 454/5 FINAL YEAR PROJECT II

Course Synopsis

This subject is the continuity of Final Year Project I. In this subjects students will conduct experimental tasks which has been planned during the Final Year Project I. Students also will completing their thesis report during this subject. In this subject, students will be also exposed to journal writing.

Bachelor of Civil Engineering Technology (Building)

PEO Bachelor of Civil Engineering Technology (Building)

PFO 1

Graduates who are practically expertise in construction technology field

PEO₂

Graduates who have technical skill and construction engineering technology knowledge where they can apply according to current market

PEO 3

Graduates who are able to expand their construction engineering technology knowledge through continuous self learning

PEO 4

Graduates who demonstrate entrepreneurial skills in construction.

PO Bachelor of Civil Engineering Technology (Building)

PO 1

Ability to apply knowledge of mathematics, science, engineering fundamental and an engineering specialisation principles to defined and applied engineering procedures, processes, systems or methodologies;

PO 2

Ability to solve broadly-defined engineering problems systematically to reach substantiated conclusions, using tools and techniques appropriate to their discipline or area of specialisation;

PO 3

Ability to design solutions for broadlydefined construction engineering technology problems, and to design systems, components or processes to meet specified needs with appropriate consideration for public health safety, as well as cultural, societal, environmental and sustainability concerns;

PO 4

Ability to plan and conduct experimental investigations for broadly-defined problems, using data from relevant sources;

PO 5

Ability to select and apply appropriate techniques, resources and modern engineering tools, with an understanding of their limitations:

PO 6

Ability to function effectively as individuals, and as members or leaders in diverse technical teams;

PO 7

Ability to communicate effectively with the engineering community and society at large;

PO 8

Ability to demonstrate an awareness of and consideration for societal. Health, safety, legal and cultural issues and their consequent responsibilities;

PO 9

Ability to demonstrate an understanding of professional ethics, responsibilities and norms of construction engineering technology practices;

PO 10

Ability to demonstrate an understanding of the impact of construction engineering practices, taking into account the need for sustainable development;

PO 11

Ability to understand awareness of management, business practices and entrepreneurship in construction engineering technology; and

PO 12

Ability to recognise the need for professional development and to engage in independent and lifelong learning.

Elective Courses:

Elective 1: PAT 318/3 Building Conservation Technology / PAT 319/3 Facility Condition Assessment
Elective 2: PAT 368/3 Building Performance Evaluation / PAT 369/3 Green Building Technology
Elective 3: PAT 418/3 Building Measurement and Analysis / PAT 419/3 Computerized Maintenance Management System

Course Syllabus for Civil Engineering Technology (Building)

YEAR 1

PAT 101/2 FUNDAMENTAL OF ENGINEERING MECHANICS

Course Synopsis

The aim of this course is to enable the students to learn the fundamentals of engineering mechanics. In engineering mechanics portion, students will be introduced to fundamentals and principles of static and dynamics mechanics. Resultant and equilibrium of coplanar force system as well as spatial force system will be covered in static portion while kinematics of particle in dynamics portion.

Course Outcomes

- **CO 1:** The ability to explain basic concepts of static and dynamic mechanics.
- **CO 2:** The ability to describe and sketch a free body diagram.
- **CO 3:** Ability to calculate the forces and reaction forces.

PAT 102/3 PHYSIC TECHNOLOGY

Course Synopsis

This course equips students with basic concept on physics and its applications especially in construction field. At the end of this course students must be able to calculate and solve basic physics problems that related to heat, lighting, electricity and acoustics. The students must also be able to demonstrate the theory and its applications.

Course Outcomes

- **CO 1:** The ability to explain the basic concepts of physical science to technology.
- **CO 2:** The ability to offer compute calculations in physics.
- **CO 3:** The ability to apply basic physical science to technology.

PAT 103/2 INTRODUCTION TO CIVIL ENGINEERING TECHNOLOGY

Course Synopsis

Introduce basic skills and knowledge required for a career in civil engineering technology. This course is a cross section of topics in contemporary civil engineering with their routine works by providing neat sketches and illustrations with practical problems. The syllabus also introduces the requirement of authority liaison, construction business and value engineering for future challenge in construction industries.

Course Outcomes

- **CO1:** Ability to understand and differentiate the scope of knowledge construction
- **CO2:** Ability to understand the requirements and procedures of construction

CO3: Ability to understand the need to realize the master plan Malaysian construction

References

- 4. Malaysian CIMP Framework 2005 2015

PAT 104/2 TECHNICAL DRAWING

Course Synopsis

This subject aims to equip students with fundamental technical drawing skills namely geometry, projection, orthography, isometric, oblique sketch and cross section. These skills are required for Construction Drawing course that will be offered in semester 2 of year 1. Students will be taught to draw manually and by using CAD software.

Course Outcomes

- CO1: Ability to understand graphics as the means of communication and a common means of communication in the design process.
- CO2: Ability to understand the conventions and standards, mendimensi and practice tolerance in producing technical drawings
- CO3: Ability to understand the basic geometric design in the creation of objects and generate MultiView, auxiliary and the sights.
- **CO4:** Ability to use computer technology (CAD) in the production of engineering drawings

PAT 204/3 CONSTRUCTION MATERIALS

Course Synopsis

This course provides an introductory overview of the various materials used in construction. After receiving an introduction into fundamental principles of structural, physical and long-term performance, students learn about material and product manufacturing techniques and how they relate to mechanical and non-mechanical properties of the various materials. Common construction methods are introduced and building details are explored.

Course Outcomes

- **CO 1:** Ability to explain the concept of the production of building materials.
- **CO 2:** The ability to explain the concept of testing.
- **CO 3:** Ability to explain the use of building materials.

References

PAT 151/3 FUNDAMENTAL OF SOLID MECHANIC

Course Synopsis

The purpose of this course is to allow students to focus on the mechanical properties of solids. The concept of stress and strain associated with 1D and 2D elements, shear force, bending moment and deflection, shear and bending stresses and changes in stress and strain.

Course Outcomes

- **CO 1:** Ability to calculate the stress, strain and deformation of members in the dimension.
- CO 2: The ability to analyze the shear force, bending moment, torsion and deflection of a simple beam.

- **CO 3:** The ability to offer to analyze shear, bending, torsion and deflection of a simple beam.
- **CO 4:** The ability to build and mengnalisa variation of stress and strain.
- **CO 5:** Ability to calculate the force and deflection at the pole.

PAT 152/3 FUNDAMENTAL OF FLUID MECHANIC

Course Synopsis

This course provides student knowledge in the patterns of movement of fluid particles. By the end of this subject student will be expected to understand the basic characteristics of fluid mechanics and fluid statics, be able to analyze the hydrostatics and basic hydrodynamics in fluid. Student also will be able to analyze and differentiate between the flow in pipe and flow in open channels. In this subject, student will be introduced to the Darcy-Weisbach equation, Moody diagram, Energy losses in pipelines, Minor losses and analysis multiple pipe systems.

Course Outcomes

- **CO 1:** The ability to understand concepts and calculating hydrostatic.
- CO 2: The ability to offer to understand the concept and measure of buoyancy and stability.
- CO 3: The ability to offer to understand the concept and calculate hydrodynamic.
- **CO 4:** The ability to understand concepts and to calculate the fluid flow and flow measurement.

PAT 153/3 GEOMATIC

Course Synopsis

In this course student will be introduce basic surveying involved in engineering. Starting from linear measurement on plane. Student will do leveling after they learn 2 different data logging. With their knowledge in tapping and leveling, they have to do traversing and tachymetry. Lastly, student will be test in real work, in geomatic camp.

Course Outcomes

- **CO 1:** The ability to understand the function and application of measurement equipment.
- **CO 2:** The ability to calculate and analyze measurement
- **CO 3:** Ability to create a basic mapping
- **CO 4:** Ability to use GPS and GIS technology

PAT 154/3 CONSTRUCTION DRAWING

Course Synopsis

The course equips students with the basic computer-aided drawing skill for general engineering drawing and especially for civil engineering profession. This includes plan, cross section drawing and structural detailing. Through lectures, students will learn the basic characteristics of professional civil engineering drawing. Through hand-on sessions using drawing software packages, this course enables the students to have first hand practice on the drawing for some idealized and

actual projects. Moreover, students will learn about bill of quantity through construction drawings.

Course Outcomes

- **CO 1:** The ability to sketch and draw construction plans.
- CO 2: The ability to understand the symbols and analyze construction plans.
- CO 3: The ability to draw construction plans and methods of construction.

YEAR 2

PAT 211/3 CIVIL & STRUCTURAL ANALYSIS

Course Synopsis

This course provides students with a clear and through presentation of the theory and application of structural analysis as it applies to beams, trusses and frames. It introduces analysis of statically determinate structures for beams, trusses and frames. Besides that, It also introduces deformations analysis of statically determinate structures using virtual work method for trusses, beams, and frames.

Course Outcomes

- CO 1: The ability to calculate the reaction force and the internal force of determinate structures
- CO 2: The ability to calculate the reaction force and the internal force of indeterminate structures
- **CO 3:** The ability to sketch the bending moment and shear force.

PAT 205/3 BUILDING SERVICES 1

Course Synopsis

An overview on overall building facilities and understanding towards its functionalities in building is the main objectives in this course. Students must be able to explain the function of building services and how it's important to a building. Student also need to produce a simple mechanical and electrical design that always been expected from a Building Technologist.

Course Outcomes

CO 1: Able to understand the facilities of buildings.

CO 2: Ability to design the facilities.

CO 3: Able to understand the law of buildings facilities.

PAT 212/3 BUILDING CONTROL

Course Synopsis

This course will reveal student with statutory constitution related to construction of a building. To achieve course learning outcome, students will be educated on building standard adapted in Malaysia, function and related agency responsibility, enforcement system, building recovery policy, construction procedure and process contract document type provision and issue when have connected with national policy.

Course Outcomes

- **CO 1:** Ability to identify organizations involved in the planning of buildings
- CO 2: Ability to identify system standards and building laws in Malaysia
- **CO 3:** Competencies for identifying procedures relating to the construction process

References

- 1. Uniform Building by Law
- 2. Housing Developers Act
- 3. Building Conservation and Rehabilitation (TA Markus)

PAT 213/2 CONSTRUCTION TECHNOLOGY

Course Synopsis

Construction Technology is an instructional program that prepares an individual for employment or continued education in the occupations of Carpentry, Electrical Wiring, Masonry, or Plumbing. It is a basic course teaching fundamentals of safety, tools, math, and basic carpentry, electrical, masonry, and plumbing skills.

Course Outcomes

CO1: Ability to understand and differentiate the scope of knowledge construction

- CO2: Ability to understand the requirements and procedures of construction
- **CO3:** Ability to understand the need to realize the master plan Malaysian construction

References

- Osbourn, D. and Greeno, R., "Introduction to Building", Fourth Edition, Pearson, Prentice-Hall, 2007

PAT 214/3 BUILDING LAW AND LEGISLATION

Course Synopsis

This course aims to give an understanding to the students on the law practised in Malaysia. In order to achieve that objective,

the students will be introduced to the legislative body and system in Malaysia. The students also will be exposed with information on the source of building law and the process in creating and terminating the contract according to the related law and the function as well as responsibility and tort based on enforcement perspective.

Course Outcomes

- **CO 1:** Ability to explain the organizational systems of law in Malaysia
- **CO 2:** The ability to identify the provisions of the constitution and functions
- **CO 3:** Competencies to explain the general principles in the field of law and proceedings

References

- 1. Laws of Malaysia: Federal Constitution (2002)
- 2. Contract Acts (1950), Arbitration Acts (1952)

PAT 261/3 BUILDING DESIGN 1

Course Synopsis

The course is designed to provide the student with a basic understanding of the behavior of reinforced concrete members and structures; to provide a basic understanding of standards methods of analysis and design of reinforced concrete building. This course covers the design load, design member, reinforced concrete design, foundation and retaining walls. The basic design of steel structures. Stretching member, column and beams. Properties and structural steel members.

Course Outcome

- **CO 1:** The ability to understand the concepts and properties of the concrete structure
- **CO 2:** The ability to design concrete structures based on the British Standard BS 8110
- **CO 3:** The ability to understand the concepts and properties of the steel structures.
- **CO 4:** Ability to design a steel structure based on the British Standard BS 5950

References

PAT 255/3 BUILDING SERVICES 2

Course Synopsis

To highlight the importance of information and all building facilities such communication systems, electrical distribution system, building automation systems and public addressing systems in modern buildings. To summarize the understanding on mechanical services in building and ability to explains the operations and functionality of each service. Both services need to understand in a manner that considering energy efficiency spirit throughout building life cycles.

Course Outcomes

- **CO 1:** Understanding of the facilities Buildings.
- **CO 2:** The ability to design the facility.
- **CO 3:** Understanding the law of a Buildings facilities.

References

- Chadderton, David V., Building Services Engineering, Hardback, April 2007, Publisher Taylor & Francis Ltd.

PAT 262/3 TOTAL ASSET MANAGEMENT

Course Synopsis

This course links the strategic objectives of property ownership, investment and portfolios with the operations and functions of the individual asset. The course therefore includes strategies in asset management techniques, tenancy management, operational and facilities management, and the establishment and operation of service contracts. The course emphasises practical application and case studies and also addresses

a range of contemporary issues faced by owners and managers, including changing tenant demands and profiles, workplace management and sustainability

Course Outcomes

- **CO1:** Communicate an understanding of property management and the process required to optimise asset and portfolio performance.
- CO2: Demonstrate a social, environmental and economic, awareness of property as sustainable personal, financial and community assets.
- **CO3:** Apply scholarly practices through disciplinary and interdisciplinary knowledge enabling the formulation of innovative solutions to property management.
- CO4: Demonstrate high standards of ethical behaviour, independence of thought and professionalism in the assessment of, and dealings with, property assets, their owners and the community.

PAT 263/2 FINANCIAL AND HUMAN RESOURCES MANAGEMENT

Course Synopsis

This course aims to provide the students' knowledge on how to apply the financial management skills and economic techniques in evaluating the cost of overall project. The role of engineering economics is to assess the appropriateness of a given project. estimate its value, and justify it from a technologist standpoint. At the end of the course, students will be able to identify and discuss issues and challenges faced by engineers relating to financial management in the current economic scenarios. The syllabus comprises scope management including project authorization, scope definition, personnel control, human resources management and finalization. Cost management including project costing, resource planning, budgeting and controlling financial completion are also emphasized. In addition, this course will also expose students to the time management

including activity sequencing, duration estimating, scheduling, progress control, monitoring and forecasting.

Course Outcomes

- **CO 1:** Ability to describe the key components of project management
- **CO 2:** The ability to analyze cash flow in construction projects
- CO 3: The ability to design cost competitive construction projects
- **CO4:** The ability to analyze the needs and demands of the nation-building

- O'Sullivan / Sheffin, (2001), Economics: Principles and Tools, Prentice Hall
- R. Logeswaran, Hairul Azhar, Pau Kiu Nai and Sim Hock Kheng, Engineers in Society, Mc Graw Hill 2nd edition.

- 4. Stanley E. P., Samuel J. M., Jack R.M, Scot M.S, Margaret M. Sutton; (2008); *Project Management : Planning, Scheduling, and Controlling Projects,* John Wiley & Sons Inc. USA

Course Synopsis

Relation with building, understanding the land law applied in most of countries is necessary. This course acknowledges students with the studies on Land, Property, Landlord and Tenant and associates to the knowledge of the law of contract and tort applied in local practice.

Course Outcomes

- CO 1: Ability to explain the system of the National Land Code in Malaysia
- **CO 2:** The ability to identify procedures pertaining to the ownership of land
- **CO 3:** Competencies to clarify the jurisdiction of the laws of the land and related acts

References

- 1. National Land Code 1965
- 2. Land Acquisition Act 1960
- 3. Control of Rent Act 1966 -State Land Rules

PAT 311/3 BUILDING DESIGN 2

Course Synopsis

Extended from part I, this course is to present the various methods of adapting buildings and to develop appropriate technical and design skills involved in such work. Design of prestressed concrete and wood structures. This course is also closely associated with such a course of Civil & Structural Analysis

Course Outcomes

- **CO1:** Ability to identify key aspects of the design and material requirements for prestressed concrete.
- CO2: The ability to apply the requirements of the code in the design of prestressed and gain knowledge about the factors that are considered in the design.
- CO3: Ability to explain wood as a structural material, the nature of the structure, which must be passed before the process used in structural applications, the standard test and the factors that influence the strength of the wood.
- **CO4:** Ability to design structural elements of wood.

PAT 312/3 FIRE AUDIT

Course Synopsis

This course will introduce the students to the definition definiton and types of active fire protection installed in building, its construction and different components that are susceptible to deterioration and damage. At the end of this courses student should be able to learn doing inspection or surveying regarding fire protection of the building.

Course Outcomes

CO1: To be able to conduct survey on fire and safety risk in building.

- **CO2:** Able to forecast on the probability of fire occurences in the building.
- **CO3:** To ascertain that the survey report on the building is not contravening to fire and safety requirement or the law.

PAT 313/3 FACILITIES MANAGEMENT CONTRACT AND PROCUREMENT

Course Synopsis

This unit enables learners to develop their understanding of the principles, processes and scope of procurement, contracts and contract Management.

Course Outcome

- **CO1:** Ability to understand procurement and different types of contract
- **CO2:** Ability to explain the use of specifications and terms and conditions in the procurement of goods and services
- **CO3:** Ability to evaluate procurement costs

References

- 1. Marc Hanson (2008), Facilities Management Contracts

PAT 314/3
BUILDING INFORMATION
MODELLING FOR FACILITY
MANAGEMENT

Course Synopsis

Building information modelling encompasses integrative concepts being used in digital information repository systems to simultaneously create, store, share, simulate, engineer and visualize whole life information in building models

Course Outcome

- **CO1:** Ability to understand of the various technical options and solutions for using information modelling in operations
- CO2: Ability to understand the collaborative processes necessary for Building Information Modelling adoption
- **CO3:** Ability to explain standard classification systems and their use in operational phases of buildings
- CO4: Ability to design and implementation of a Building Information Modelling management process

PAT 318/3 BUILDING CONSERVATION TECHNOLOGY

Course Synopsis

Preservation of historic buildings is an area that is growing in Malaysia. Many efforts have been made by various parties, including local authorities, government, nongovernment, private sector and individuals to continue to preserve the historic building for future generations.

Course Outcomes

- **CO 1:** Ability to explain the cause of damage to buildings
- **CO 2:** The ability to assess the damage to the building.
- **CO 3:** Ability to propose conservation measures suitable building
- CO 4: The ability to assess the regulations involved in building conservation

PAT 319/3 FACILITY CONDITION ASSESSMENT

Course Synopsis

At the end of the course students will be able to provide a detailed report on the condition of the building under investigation. In preparing the report, the student will be exposed to the types of damage to the building structure, then they will be taught to mengklasifikasiken defects according to the level of 'serious illness' a defect. Students will be taught to identify priority repairs and repair methods appropriate to a defect.

Course Outcomes

- CO 1: Ability to explain the extent of the damage of an element in building
- **CO 2:** The ability to assess the types of building defects
- **CO 3:** The ability to assess the repair of building defects
- **CO 4:** The ability to select repair kutamaan
- **CO 5:** Ability to provide Building Condition Assessment Report

PAT 361/3 BUILDING PATHOLOGY

Course Synopsis

Knowledge and skills required in this course is an understanding of the basic construction technology and the way a building or material failure. The purpose of this course is to learn the principles of structural failure, the nature of the material structure of a building, and how the material is damaged the effects of various environmental factors. especially those related to water. In addition, students will be taught a variety of inspections carried out by building surveyors. Students will be exposed to the preparation of schedules of dilapidation and acted as an expert witness.

Course Outcomes

- **CO1:** Able to recognize the role and responsibilities of building technologist
- CO2: Able to recognize The procedures and equipment required to carry out various types of surveys.
- CO3: Able to examine the reasons for building regulation and the technical standards adopted including the inspection, testing and repair methodology.
- **CO4:** Able to analyze defect in buildings and propose appropriate remedial measure

References

PAT 362/3 DEVELOPMENT MANAGEMENT

Course Synopsis

Through this course, students will be introduced to management theories such as time-management

techniques, cost and quality in construction works. theories of building management. Execution & methods in project management such as methodology and project control will be taught in this course.

Course Outcomes

- **CO1:** Able to understand timemanagement techniques, cost and quality in construction works.
- **CO2:** Able to undertstand the development of a project management
- **CO3:** Able to do time management planning and the concept of problem solving in management

- 5. Bennett J., International construction Project Management: General Theory And Practice, Butterworth Heinemann, 1991.

Cleland D.I., king W.R., project Management Handbook, Van Nostrand Reinhold, 1988

CO4: Ability to present the proposal and final product orally and graphically.

coordination, space review and space forecast will be taught in this course.

PAT 454/3 FINAL YEAR PROJECT 1

Course Synopsis

This an individual research project in connection with a special engineering problem and under the guidance of an academic staff. The project undertaken may fall under one of the following areas: Mathematical analysis, experimental tests, computer simulation, hardware and/software development, to their field of interest. At the end of the project, each student prepares an engineering report, presents and demonstrates findings and results of the project work.

Course Outcomes

- **CO1:** Ability to modulate and utilize academic knowledge and practical experience in conducting an academic project.
- **CO2:** Ability to think objectively, analytically and critically in identifying and solving problem in systematic manner.
- **CO3:** Ability to work independently in conducting and completing an academic project.

PAT 363/3 SPACE MANAGEMENT

Course Synopsis

This course will provide guidance for students to study the space management and improving the space use. The study on management of improvement in space use in a complex area,

Course Outcomes

- CO1: Able to study accurate and real time information about facility space and its usage.
- **CO2:** Able to analyze the space utilization in a variety of ways, including occupancy
- **CO3:** Able to effectively manage space today and forcast the building space office for future use

- Lamie E "Space Planning: Comprehensive Guide for Residential Interior Space Planning" Xlibris, 2011.
- 2. David G. Cotts, Kathy O. Roper, Richard P. Payant "Facility Management Handbook" Amacom, 2010.

PAT 368/3 BUILDING PERFORMANCE EVALUATION

Course Synopsis

This course is to introduce the systematic investigation of buildings and building problems and to develop appropriate technical skills involved in carrying out such work. This practical module helps on diagnosis and gives an indication of the remedy for the situation discovered.

Course Outcomes

- **CO1:** Able to understand the study on building defects
- CO2: Able to investigate building problems and develop appropriate solutions
- **CO3:** Able to understand the techniques and materials involve to diagnose and propose remedial actions

PAT 369/3 GREEN BUILDING TECHNOLOGY

Course Synopsis

This course approaches sustainable development for buildings by examining building components and performance. They will be taught about sustainable development in building starting with site planning and evaluation, and proceeds through construction, commissioning, and occupancy phases. The course may include many case studies of historic and contemporary structures exemplifying various sustainability features.

Course Outcomes

- **CO1:** Able to understanding the concept of green building design
- **CO2:** Able to explore a wide range of effective strategies for influencing the process at the right stages for the purpose of integrating sustainability
- CO3: Able to explore the importance of site selection and various techniques for sustainable site planning and site management during construction
- **CO4:** Able to understand the method and specifications within green building technology scope

PAT 364/3 PROCUREMENT FOR BUILDING MAINTENANCE

Course Synopsis

This unit enables learners to develop their understanding of the range of strategies used in the delivery of effective property and building services maintenance in a variety of Facility Management contexts and the scope of management systems and technologies available.

Course Outcome

CO1: Ability to define building design

CO2: Ability to understand the maintenance implications of building, structures and components

CO3: Ability to explain about strategy for the maintenance of the building fabric can be implemented

References

PAT 411/3 MAINTENANCE AND FACILITIES MANAGEMENT

Course Synopsis

To carry a proper maintenance work, it is essential to have good management skills. The course is to introduce effective aftercare strategies for properties and to develop appropriate practical skills in managing such work. The module comprises on maintenance policy, maintenance manual, the management studies and the facilities management.

Course Outcomes

- **CO1:** Able to understand the principles of maintenance and facilities management
- CO2: Able to manage maintenance information and providing improvement and strategy
- CO3: Able to develop a performance management system for maintenance
- CO4: Able to apply maintenance approaches to achieve continuous improvement

PAT 412/4 BUILDING INTEGRATED PROJECT

Course Synopsis

In this course, student will work in group of five to solve a construction related project. This given project task is a capstone project. All the knowledge and practical skill like design, construction method, construction material, project management and so on that they have gain from three years study in this program will be ears study ill like design. nce; scope ifications in iagnose and propose remedial actionsused in this course

to accomplish the given project. At the end of the course, students' project proposal will be evaluated by experienced construction industry practitioner.

Course Outcomes

- **CO1:** Ability to work in group effectively to accomplish a design project.
- CO2: y to work In group effectively Ability to propose design with the best construction method and the most effective cost and management.
- **CO3:** Ability to use effective communication skill and professional ethic.

PAT 454/3 FINAL YEAR PROJECT 2

Course Synopsis

This subject is the continuity of FinalYear Project I. In this subjects students will conduct experimental

tasks which has been planned during the Final Year Project I. Students also will completing their thesis report during this subject. In this subject, students will be also exposed to journal writing.

Course Outcomes

- **CO1:** Ability to modulate and utilize academic knowledge and practical experience in conducting an academic project.
- **CO2:** Ability to think objectively, analytically and critically in identifying and solving problem in systematic manner.
- **CO3:** Ability to work independently in conducting and completing an academic project.
- **CO4:** Ability to present the proposal and final product orally and graphically.

PAT 418/3 BUILDING MEASUREMENT AND ANALYSIS

Course Synopsis

In every building and civil engineering projects or office renovation works, taking-off building quantities is an important job necessary to assess the construction cost of a project. This job needs someone who has the skills and knowledge to take-off building quantities independently from site measurements as well as project drawings. Such a person is called a "Taker-off". Today, the building designs are increasingly complex. A good "Taker-off" must have good working knowledge of building technology, building services, building measurement; interpret architectural, structural and services drawings accurately: understand the standard method of measurement and/ or appreciate building costs. He must also be proficient in computer applications to achieve greater productivity in taking-off building quantities. This

course will enhance participants' knowledge and competencies in carrying out building measurement work. It allows participants to move into roles of higher supervisory or management-related positions and opens up opportunities for those who wish to switch careers as a "Taker-off", and estimator or a quantity surveyor.

Course Outcomes

- **CO 1:** The ability to explain the process of measurement
- CO 2: The ability to carry out the measurement of structural elements
- **CO 3:** Ability to perform measurement infra
- CO 4: Ability to prepare BQ

PAT 419/3 COMPUTERIZED MAINTENANCE MANAGEMENT SYSTEM

Course Synopsis

Computerized Maintenance Management System (CMMS) are utilized by facilities maintenance organizations to record, manage and communicate their day-today operations. The system can provide reports used in managing the organization's resources, preparing facilities key performance indicators (KPIs)/metrics to use in evaluating the effectiveness of the current operations and for making organizational and personnel decisions. In today's maintenance world the CMMS is an essential tool for the modern facilities maintenance organization.

Course Outcomes

- **CO 1:** Ability to explain the setup steps CMMS
- **CO 2:** The ability to evaluate CMMS system
- **CO 3:** Ability to use the CMMS system
- **CO 4:** Ability to audit and optimize the use of CMMS

Bachelor of Chemical Engineering Technology (Honours) (Industrial Chemical Process)

Programme Educational Objectives (PEO)

PEO 1

Graduates who are able to apply knowledge and technical skills in providing practical engineering solutions

PEO 2

Graduates who are able to demonstrate professionalism and leadership and contribute to team success and manage projects in a multi-disciplinary environment.

PEO 3

Graduates who are able to advance in their career through adopting the advancements in engineering and technology as part of life-long learning experiences through ever changing environment.

Program Outcomes (PO)

PO 1

Apply knowledge of mathematics, science, engineering fundamentals and engineering specialization principles to define and applied engineering procedures, processes, systems or methodologies.

PO₂

Solve broadly-defined engineering problems systematically to reach substantiated conclusions, using tools and techniques appropriate to their disciplines or area of specialization.

PO 3

Design solutions for broadly-defined engineering technology problems, and to design systems, components or processes to meet specified needs with appropriate consideration for public health and safety, as well as cultural, societal, environmental and sustainability concerns.

PO 4

Plan and conduct experimental investigations of broadly-defined problems, using data from relevant sources.

PO 5

Select and apply appropriate techniques, resources and modern engineering tools with an understanding of their limitations.

PO 6

Function effectively as individuals, and as members or leaders in diverse technical teams.

PO 7

Communicate effectively with the engineering community and society at large.

PO 8

Demonstrate an awareness of and consideration for societal, health, safety, legal and cultural issues and their consequent responsibilities.

PO 9

Demonstrate an understanding of professional ethics, responsibilities and norms of engineering technology practices.

PO 10

Demonstrate an understanding of the impact of engineering practices, taking into account the need for sustainable development.

PO 11

Demonstrate an awareness of management, business practices and entrepreneurship.

PO 12

Recognise the need for professional development and to engage in independent and lifelong learning.

Course Syllabus

PTT 136/3 ELECTRICAL TECHNOLOGY

Course Synopsis

This course is offered to nonelectrical engineering background. This course introduces the basic electrical circuit theory, DC and AC circuits, basic principles of 3-phase AC circuits, and magnetic circuits. The course also covers the fundamental of electronic components such as semiconductors, diodes and transistors. The laboratory sessions cover the concepts being discussed in lectures.

Course Outcomes

- Ability to demonstrate the application of the principle elements of DC and AC circuits, principles of electricity including Kirchhoff's of currents and voltages.
- Ability to calculate parameters of three phase AC system for Wye and Delta connection, and also the basic concept of electronic components.
- Ability to construct the basic concept of magnetism and electromagnetism and its application in DC and AC machines

PTT 137/3 ENGINEERING GRAPHIC

Course Synopsis

The subject covers principles and methods useful to modern engineering and technology which are used in determining space relations of points, lines, planes, and their combination. The student will be exposed to development of drafting skills and introduction to sketching, drafting instruments, computer software for graphic representations and problem solving. Emphasis placed on graphical analysis, orthographic projection, auxiliary views, pictorial drawings, dimensioning methods, and sectioning with adherence to

drafting standards. AutoCAD or similar computer-aided drafting & design software will be used.

Course Outcomes

- Ability to describe and demonstrate the use of various manual drafting tools and equipment.
- Ability to demonstrate techniques and standard practices of technical graphic.
- Ability to demonstrate the most 2D and 3D AutoCAD commands and proper use of AutoCAD software

- James Bethune. 2010. Engineering Graphics with AutoCAD 2011. Prentice Hall Publishing.

Course Synopsis

This course covers the theories, structure, bonding, nomenclature, properties, reaction, synthesis and the importance of the various classes of organic compounds. This course emphasizes the chemistry of the principal functional groups and the application of organic chemistry in the chemical process industry.

Course Outcomes

- 1. Ability to apply the chemical and physical properties of each functional group carry out theoretical reaction mechanism at the molecular level.
- 2. Ability to propose the chemical reaction and mechanism of each functional group.
- 3. Ability to analyze the knowledge of organic chemistry in the chemical process industry.

PTT 140/3 PHYSICAL CHEMISTRY

Course Synopsis

Physical chemistry is an extensive use of mathematical models to describe fundamental knowledge in physics, chemistry and combination of both such as laws of thermodynamic, chemical equilibrium, reaction equilibrium and chemical kinetics. In this course. students will learn to calculate thermodynamic and equilibrium properties of matter, reaction equilibrium of ideal gas and mixture gas, phase diagram and etc. Laboratory experiment will illustrate concepts being discussed in lecture and familiarize students with many tools used by physical chemist.

Course Outcomes

- Ability to distinguish the phenomena, basic concepts, laws and principles in physical chemistry.
- 2. Ability to calculate problems concerning physical chemistry.
- 3. Ability to write various fundamental laws in physical chemistru.

PTT 141/3 ANALYTICAL CHEMISTRY

Course Synopsis

This course introduces and discusses the basic principle of analytical chemistry that covers data analysis and interpretation. Basic statistics and the utilization of statistics are applied in most of the analytical methods. To introduce, discuss and apply classical analytical methods such as gravimetriy and titrimetry. This course also meant to introduce, discuss and apply modern methods in analytical chemistry such as chromatographic and spectroscopic technique

Course Outcomes

- Ability to calculate and perform the correct statistical method for data analysis and to remember the steps in quantitative analysis.
- Ability to classify and use separation techniques and gravimetric methods for mass determination
- Ability to differentiate and to calculate the concentration of analyses of various titrimetic methods (acid-base, complexation, redox and precipitation).
- Ability to apply the chromatography principles and to interpret and calculate the peak height for concentration determination.
- Ability to understand the spectroscopic principles and to calculate the concentration.

PTT 242/3 INTRODUCTION TO PROCESS INSTRUMENTATIONS

Course Synopsis

The course begins with an introduction to process measurements involved in the process industries, followed bu introduction to the fundamentals of industrial valves, pumps, compressors, fans and blowers. This is complemented with the ability to employ and analyze the ISA (The Instrumentation Systems and Automation Society) symbology and tagging systems. This course also discusses the design and development of the process flow diagram, and the piping and instrumentation diagram of a simple and complex system. These concepts are applied in control and optimization in unit operations in chemical systems.

Course Outcomes

 Ability to interpret the functions of different types of valves; apply and employ the operational aspects of the valves.

- 2. Ability to analyze the ISA symbology for the process flow diagram (PFD), and piping and instrumentation diagram (P & ID); apply appropriate symbols and sketch the process flow diagram and piping and instrumentation diagram.
- 3. Ability to apply and develope the concepts in control and optimization in unit operations in chemical system.

PTT 243/4 MATERIAL & ENERGY BALANCE

Course Synopsis

The course highlights the basic concept of material and energy balance in different systems. The aims are to teach students how to formulate and solve materials balances in various processing systems. Exposure on the concept and understanding of material and energy balances are emphasized which covers single and multiphase systems and nonreactive and reactive processes. These concepts are applied to analyze and solve problems in chemical systems.

Course Outcomes

- Ability to apply knowledge of engineering fundamentals to define and solve, engineering processes and methodologies, together with basic engineering calculations.
- Ability to calculate and analyze information broadly, using appropriate tools and technique related to materials and energy balance.

- Ability to analyze design material and energy processes to meet specified needs with appropriate consideration for chemical systems.
- 4. Ability to compose data given in a system investigation on material and energy balance.

PTT 244/4 THERMODYNAMIC

Course Synopsis

This course covers the first and second laws of thermodynamics, substance properties, mass and energy analysis, entropy, refrigeration and gas mixture. It also covers the evaluation of the theory of the solution thermodynamics and the equation of state for pure and mixture fluids, the phase equilibrium and chemical reaction equilibrium calculations

Course Outcomes

- Ability to analyze the fundamentals properties of thermodynamics and the law of thermodynamics in engineering systems.
- Ability to evaluate heat, work and thermodynamic properties relations.
- Ability to evaluate the theory of the solution thermodynamics and chemical reaction equilibriums.

PTT 245/3 FLUID MECHANICS

Course Synopsis

This course emphasizes fundamental concepts and problem-solving techniques. This course covers properties of fluids, pressure, fluid statics and kinematics, mass, Bernoulli and energy equations, momentum analysis of flow system, dimensional analysis and modelling, internal flows (pipe flows), differential analysis of fluid flow, external flows (lift and drag) and compressible flow.

Course Outcomes

- 1. Ability to analyze the essential parameters describing a fluid system and dimensional analysis and homogeneity.
- Ability to evaluate pressures, forces and stability in static fluid systems and the link between conserved quantities and the equations of fluid mechanics.
- Ability to evaluate control volumes and surfaces for developing the equations of fluid mechanics and phenomena associated with external flow.

PTT 247/3 HEAT TRANSFER

Course Synopsis

This course emphasizes fundamental concepts and problem-solving techniques. Topics to be covered include heat transfer mechanism which is conduction, convection and radiation also analyzes heat transfer knowledge and designing heat transfer equipment such as evaporator, dryer and agitated vessel.

Course Outcomes

- 1. Ability to compare the heat transfer mechanism.
- 2. Ability to calculate mode of heat transferred.
- Ability to analyze heat transfer knowledge as well as designing heat transfer equipment.

PTT 248/4 REACTOR ENGINEERING

Course Synopsis

This course introduces the students to various types of reactors. Topics covered include a comparison of reactors, special instrumentation and control. Here, the students will also be introduced to simple designs of bioreactors and also the scale up procedure.

Course Outcomes

- Ability to recognize, compare and draw the schematic diagram for specific types of reactors.
- Ability to analyze relevant data to design a stirred tank reactor according to the specific application.
- Ability to design process scale up based on geometric similarities or constant power number.

PTT 249/3 MASS TRANSFER

Course Synopsis

This course emphasizes fundamental concepts and problem-solving techniques. Topics to be covered include mass transfer mechanisms which is diffusion, Ficks Law, Maxwell Law and designing mass transfer equipment and gas adsorption.

Course Outcomes

- Ability to demonstrate general knowledge of mass transfer (molecular diffusion, convection).
- Ability to derive simple models that capture the significant features of mass transfer problem.
- Ability to analyze data to design mass transfer process and equipment.

- 1. Thirumaleshwar, M. 2006. Fundamental of Heat & Mass Transfer. Pearson Education.
- 2. Diran Basmadjian. 2004. Mass transfer: Principle and Appication. CRC Press.
- 3. Louis Theodore, Francesco Ricci. 2011. Mass Transfer Operations For Practising Engineer. Wiley.

- 4. Alapati Suryanarayana. 2002. Mass transfer Operation. New Age International Publisher.
- Jaime Benitez. 2011. Principles and Modern Applications of Mass Transfer Operation. 2nd Edition. Wiley.

PTT 326/4 PROCESS CONTROL & DYNAMIC

Course Synopsis

This course includes an introduction to process control and dynamics, theoretical models, dynamic behavior of processes, feedback controllers, control system instrumentation, overview of control system design, PID controller design and troubleshooting. The theories are supported by performing laboratory experiments.

Course Outcomes

- Ability to derive and develop a theoretical model of chemical processes, analyze Laplace transform techniques to simplify first order and second order processes and create transfer functions and state space models.
- 2. Ability to derive and develop dynamic behavior of first and second order processes, analyze dynamic response characteristics of more

- complicated processes and development of empirical models from process data.
- Ability to analyze control system instrumentation and propose feedback control system for bioprocess and chemical processes.
- Ability to calculate and analyze dynamic behavior of closedloop control system.

PTT 327/3 OLEOCHEMICAL PROCESS & PRODUCTS

Course Synopsis

The purpose of this course is to expose the students about oleochemical products. The first part of the course discusses the introduction of fats and oils, sources of commercial and alternative oleochemical raw materials. The second part of the course, reveals with the oleochemical processing. The last part of the course discuses the major olechemical products in the industry and application of the products and formulation in daily life

Course Outcomes

- Ability to define and describe the oleochemical basic concepts.
- Ability to describe and explain the important processes in oleochemical industry
- Ability to describe and apply the oleochemical products and formulations.

- O'Brien, R.D. 2009. Fats and Oils Formulating and Processing for Application. CRC Press.
- 2. O'Brien, R.D. Farr, W.E. and Wan, P.J. 2008 Intoduction to Fats and Oils Technology. Third Revised Edition. AOCS Press.

- Gunstone, F.D. 2004. The Lipid Handbook. Blackwell Pub.
- 4. Erhan, S.Z. 2005. Industrial Uses of Vegetable Oils. AOCS Press.
- Gunstone, F.D. and Hamilton, R.J. 2001. Oleochemical Manufacture and Applications. Sheffield Academic Press.

PTT 328/4 FINAL YEAR PROJECT 1

Course Synopsis

This is an individual research project in connection with a special engineering problem and under the guidance of an academic staff. The project undertaken may fall under one of the following areas: mathematical analysis. experimental tests, computer simulation, hardware and/or software development, device fabrication. In this subject, the students will be taught on how to prepare the research proposal. Besides that, the student will be also exposed to an earlier part of thesis writing such as introduction, literature review and methodology.

Course Outcomes

- Identify and create research objective also problem statement.
- Review information source then recognizes, construct and justify the suitable research information.

- Perform and report the information in the form of dissertation format.
- Describe, explain and defend effectively in the form of proposal defends.

PTT 329/3 SAFETY & LOSS PREVENTION

Course Synopsis

This course covers the fundamental of process of safety specifically toxicology, industrial hygiene, source model, fires and explosions as well as relief concept design. The students are also exposed to hazard identification, risk assessment and accident investigation. The course will be concluded with hazard and safety.

Course Outcomes

- Ability to analyze the source, toxic release and dispersion models and evaluate the significance of the events.
- Ability to distinguish fires and explosion as well as examine ways to prevent it.
- Ability to analyze relief concepts as well as calculated or sizing the relief system.
- Ability to analyze and evaluate process safety to identify the hazard and risk in the industry.

- 4. Sanders, R.E. 2005. Chemical Process Safety; Leaning From Case Histories. Elsevier Butterworth Heinemann, Third Edition. Amsterdam.
- Marshall, V. & Ruheman, S.
 2001. Fundementals of Process Safety. Rugby; ICehmE, UK.

Course Synopsis

This course contains the synthesis and preliminary design of chemical process plant. It focuses on general design information, material and energy balance analysis of the real chemical plant system, process flow sheeting, selection of process equipment (upstream and downstream), specifications of process equipment, process sizing design of equipment, heat transfer and mass transfer equipment, design considerations for maintaining sterility of process streams and also materials of construction for chemical plants. Simulation Software will be used as the main feature and implemented throughout the course in the process flow sheeting and equipment design. The design project report then will be implemented based on the previous concepts of the Bioprocess plan design system exposed.

Course Outcomes

 Ability to apply engineering principles like reaction engineering rules, bioreaction stoichiometry, thermodynamics, kinetics, unit operations and unit procedures and also develop the bioprocess plant system.

- 2. Ability to justify, synthesize and design a suitable unit operation in a bioprocess plant based on bioprocess system involved.
- Ability to develop and solve unit operation design using modern simulation and create the Process Flow Diagram (PFD) for bioprocess plant.

PTT 331/3 PETROLEUM & GAS PROCESSES TECHNOLOGY

Course Synopsis

This course introduces the students to processes and technology involved in oil and gas production field. Topics covered include the history and background of refinery process, separation of produced fluids and treatment of crude oil. Apart from that, student will also be exposed to the field processing and treatment of natural gas as well as petroleum refinery process.

Course Outcomes

- Ability to recognize and explain background, formation and production of oil and gas and explain the basic refinery process.
- Ability to describe and compare the separation process of produced fluids and treatment process of crude oil and natural gas.
- Ability to demonstrate understanding and distinguish process and technology involved to process products from each level of petroleum refining.

PTT 332/3 PROCESS EQUIPMENT MECHANICAL DESIGN

Course Synopsis

This course develops the principles of engineering mechanics. Students calculate the geometrical properties of cross sections, analyze loads on engineering structures, determine support reactions, and distribution of forces and moments in members. The students also analyze problems involving particle and rigid body motion.

Course Outcomes

- Ability to interpret the basic principles of statics and dynamics on mechanism and bodies.
- 2. Ability to solve systems/ problems related to forces, loads, displacement of bodies at rest.
- 3. Ability to solve systems/ problems related to forces, loads, displacement, velocity and acceleration of bodies in motion.

PTT 349/4 UTILITY DESIGN

Course Synopsis

The aim of the subject is to introduce the student to the design of applied utilities in the chemical industry. Topics covered include the design of shell and tube heat exchanger, evaporator, condenser, reboiler and cooling tower. Apart from that, exposure on integration process which involves energy integration will be emphasized as well

Course Outcomes

- 1. Ability to explain the mechanism of heat transfer and its relation to different type of utilities.
- Ability to identify and analyze data to design different types of heat exchanger
- Ability to identify evaporator, reboiler, condenser and other utilities and demonstrate their optimum operating procedures.

- Coulson, J. M. Richardson. 2005. Chemical Engineering Design. 6th Edition. Oxford: Pergamon Press.

PTT 350/4 SEPARATION ENGINEERING

Course Synopsis

This subject aims to provide students an understanding of the principles of separation processes based on both equilibrium stage concepts and mass transfer rate control are addressed in a range of chemical process operations, including distillation, gas absorption, extraction, adsorption, and membrane-based processes.

Course Outcomes

 Ability to apply principles; develop a basic design for gasliquid separation equipment (gas absorber) and vaporliquid separation equipment (distillation column)

- 2. Ability to apply principles; develop a basic design for liquid-liquid separation equipment (extractor) and fluid-solid separation equipments (adsorber and leaching equipment).
- Ability to apply and calculate based on principles of membrane separation process and mechanical- physical separation process (filtration and centrifugation).

PTT 426/6 FINAL YEAR PROJECT 2

Course Synopsis

This is an individual research project in connection with a special engineering problem and under the guidance of an academic staff. The project undertaken may fall under one of the following areas: mathematical analysis. experimental tests, computer simulation, hardware and/or software development, device fabrication. In this subject, the students will be taught on how to discuss the research findings and determine the conclusion based on findings. In the end of this course, students will present the research findings and submit hardcover thesis.

Course Outcomes

- Identify the methodology of the research then organize and demonstrate experiments to collect research data.
- Choose the suitable research data and synthesize the data.
- Explain the data findings then describe, discuss and justify based on academic source.
- 4. Originate, explain and defend effectively in the form of the thesis requirement.

PTT 427/4 PROCESS PLANT DESIGN 2

Course Synopsis

This course encompasses modern strategies for the design of chemical process plants including piping and instrumentation diagram (P&ID), control strategies, economic analysis, costing and profitability analysis. Students will be exposed to the software application using simulation software to simulate and analyze the designed processes. Students are to present their design project in a group.

Course Outcomes

 Classify and recommend safety and risk assessment of the chemical process plant system.

- Design the typical control strategies for the safe plant operation and recommend the waste management for any visual impact from the process effluent to meet the environmental friendliness of the products.
- Apply the technique used for estimation of plant economics and comparative economic feasibility of the process plant for project evaluation and process optimization.

PTT 428/3 GREEN TECHNOLOGY AND SUSTAINABLE WASTE MANAGEMENT

Course Synopsis

The aim of this course is to introduce the concept of Green Chemistry principles in chemical processes and waste management in order to develop methods which are more environmentally-friendly that are both economically and technologically feasible. This course is divided into two parts. The first part of this course emphasizes on the application of emerging chemical technologies based on Green Chemistry in design, manufacture, and use of chemical and processes which can lead to a reduction of pollution sustain and maintain the ecology system. The second part of the course concentrates on the various sustainable waste management with different methods and fields of expertise for each. This includes issues of reduce or prevent waste arising, reuse waste, recycle, energy recovery and disposal in landfill sites.

Course Outcomes

 Ability to demonstrate knowledge and comprehesive of essential facts, concepts, principals and theories related to areas of chemistry.

- 2. Ability to recognize and analyze environmental problems related to chemical processes and establish strategies to solve them.
- Ability to interpret, justify, and propose the common waste management practice in industry and local authorities and describe the legal framework structure.

PTT 429/3 INDUSTRIAL WASTE TREATMENT

Course Synopsis

This course covers waste treatment methods that are commonly used in industries. It's introduced to the terms that are related to waste and how to calculate the properties such as biological oxygen demand (BOD), chemical oxygen demand (COD) and total carbon (TOC). From these calculations and other given information, basic unit operations involved in the treatment of waste can be designed. This course also analyzes the importance of an integrated waste handling sustems including source reduction, recycling and reuse, composting, land filling, incineration and combustion. Also give an understanding of the processes involved in waste treatment for different industries keeping in view of the Environmental Impact Assessment (EIA), Life Cucle Assessment (LCA) and legal framework.

Course Outcomes

 Ability to demonstrate knowledge, comprehensive and calculate of essential facts, concepts, principals and theories related to areas of chemistry,physical and biological industrial waste treatment.

- Ability to recognize, calculate, analyze and design basic structure of waste treatment unit operation and establish strategies to solve them.
- Ability to interpret, justify, and propose the common waste management practice in industry and local authorities and describe the legal framework structure.
- Ability t interpret compares, justify and choose the correct method for particular industrial waste treatment.

PTT 430/3 FOOD PROCESSING TECHNOLOGY

Course Synopsis

This course covers the multidisciplinary field of applied physical sciences which combines science, microbiology, and engineering education for the food and related industries. Topics to be covered include an introduction to food engineering, food ingredients, nutrition, nutritional information, spoilage, food production systems, preservation processes, freezing, drying, direct-heating, radiation, extrusion and packaging.

Course Outcomes

- 1. Ability to interpret ingredients and nutrition in food.
- 2. Ability to differentiate the principle of food engineering operation.
- 3. Ability to analyze the problem that involved in food engineering operation.

- Paul Singh, Dennis R. Heldman. 2009. Introduction to Food Engineering, Fourth Edition (Food Science and Technology). Academic Press. Elsevier.

Bachelor of Chemical Engineering Technology (Honours) (Industrial Biotechnology)

Programme Educational Objectives (PEO)

PEO 1

Graduates who are highly skilled engineering technologist who have successful careers in the field of industrial biotechnology or other biorelated fields.

PEO 2

Graduates who are knowledgeable in science and engineering principles in biotechnology and pursue continuing and lifelong learning.

PEO 3

Graduates who are serving the society by promoting ethical values, professionalism, sensitive and responsible to the needs of sustainable development.

Program Outcomes (PO)

PO 1

Apply Knowledge of mathematics, science, engineering fundamentals and engineering specialization principles to defined and applied engineering procedures, processes, systems or methodologies.

PO₂

Solve broadly-defined engineering problems systematically to reach substantiated conclusions, using tools and techniques appropriate to their disciplines or area of specialization.

PO 3

Design solutions for broadly-defined engineering technology problems, and to design systems, components or processes to meet specified needs with appropriate consideration for public health and safety, as well as cultural, societal, environmental and sustainability concerns.

PO 4

Plan and conduct experimental investigations of broadly-defined problems, using data from relevant sources.

PO 5

Select and apply appropriate techniques, resources and modern engineering tools with an understanding of their limitations.

PO 6

Function effectively as individuals, and as members or leaders in diverse technical teams.

PO 7

Communicate effectively with the engineering community and society at large.

PO 8

Demonstrate an awareness of and consideration for societal, health, safety, legal and cultural issues and their consequent responsibilities.

PO 9

Demonstrate an understanding of professional ethics, responsibilities and norms of engineering technology practices.

PO 10

Demonstrate an understanding of the impact of engineering practices, taking into account the need for sustainable development.

PO 11

Demonstrate an awareness of management, business practices and entrepreneurship.

PO 12

Recognise the need for professional development and to engage in independent and lifelong learning.

PTT 102/3 ORGANIC CHEMISTRY 1

Course Synopsis

This course covers the theories structure, bonding, nomenclature, properties, reaction, sunthesis and the importance of the various classes of organic compounds. The course then builds upon this information and explores the mechanisms of a number of organic reactions involving the studied functional groups. It provides a firm foundation for further studies in organic, biological, and biochemistru. The central theme of this course is the chemistry of the principal functional groups. The application of organic chemical process is discussed in terms of biotechnology industry.

Course Outcomes

- Ability to explain and differentiate the chemical and physical properties of each functional groups carry out theoretical reaction mechanism at molecular level.
- Ability to explain and differentiate the chemical, physical properties and reactions of alcohol, ether, aldehyde, ketone and carboxylic acids.

3. Ability to apply the knowledge of organic chemical process in biotechnology industry.

PTT 103/3 BIOCHEMISTRY

Course Synopsis

The topics covered in this course include the properties and structure of water, classification and function of biomolecules such as carbohydrates, lipids and amino acids, role of proteins and enzymes in biochemistry, electron transport, citric acid cycle and photosynthesis.

Course Outcomes

- Ability to differentiate basic structure, properties, functions and classification of important biomolecules.
- Ability to discuss structure, function and kinetic properties of enzymes and their roles in metabolism
- Ability to illustrate electron transport, citric acid cycle and photosynthesis.
- Ability to describe enzymes and nucleic acids extraction and isolation.

PTT104/2 INTRODUCTION TO BIOTECHNOLOGY

Course Synopsis

This course provides an overview of biotechnology industry, from the traditional to the recent hightechnology industries. The course also highlights important and recent advances in methods and applications of biotechnologu with regards to microorganisms and plants. The importance major biotechnological streams; industrial biotechnology. agricultural biotechnology, medical biotechnology and environmental biotechnology will be discussed, including recent advances and modern processes. Aspects on ethical implications, safety and intellectual will also be covered.

Course Outcomes

- Ability to explain foundations of modern biotechnology.
- Ability to demonstrate important recent advances in methods and applications of biotechnology with regards to microorganisms and plants.
- 3. Ability to differentiate scopes and importance of various biotechnological streams.
- Ability to demonstrate understanding on ethical implications of biotechnology.

PTT105/3 ENGINEERING GRAPHIC

Course Synopsis

This course introduces the use of technical drawing in an effective way for communicating and integrating with engineering concept. Students will learn engineering drawing to interpret design, using graphics method such as geometry, parallel projections, sectional drawing, machines

drawing and working drawing. The primary software used in this course is AutoCAD.

Course Outcomes

- Ability to use the computer to produce complete drawing based on well define technical araphic standard.
- Ability to apply basic geometric construction techniques to create engineering drawing using computer aided design (CAD).

PTT106/3 MICROBIOLOGY

Course Synopsis

This course introduces to student the microbial world and its relationship with man and the environment. Emphasizing on the basic concepts in microbiology, aseptic techniques and microscopy. It also encompasses bacteria. fungi and virus groups, and their taxonomy. Structure and function of prokaruote and eukaruote cells. metabolism of microbes and microbial growth kinetics and fermentation process are featured in the course. Food and industrial microbiology are also featured with reference to factors contributing to productivity, spoilage and preservation.

Course Outcomes

- Ability to categorize classes of microorganisms according to diversitu.
- 2. Ability to use practical skills in fundamental microbiological techniques.
- Ability to demonstrate microbial growth and metabolism, and compare physical and chemical methods to control growth.
- 4. Ability to compare the role of microorganisms in industrial, food and medical biotechnology.

PTT107/3 PHYSICAL CHEMISTRY

Course Synopsis

A one-semester course designed to prepare engineering students for advance knowledge in physical chemistry such as thermodynamics, chemical equilibria and chemical kinetics.

Course Outcomes

 Ability to explain and calculate the basic concepts, laws and principles in physical chemistry.

- Ability to calculate and solve a problem concerning material equilibrium, standard thermodynamic function and reaction equilibrium in ideal gas mixture.
- Ability to illustrate and solve problems concerning chemical kinetics, phase diagrams and electrochemistry.

- Levine I. N. (2002). Physical Chemistry, McGraw Hill, 5th Edition.

PTT108/4 MASS AND ENERGY BALANCE

Course Synopsis

The aims of this course is to expose students on the knowledge of how they should formulate and solve materials balances in various processing systems. Essentially, the material and energy which goes into the process will be converted by physical and chemical processes, whilst some mau remain unconverted. The task for the chemical and biological technologies engineer to create a process statement which identifies all the materials and energy entering, remaining and leaves the systems.

Course Outcomes

- Ability to calculate mass balance in chemical and biological process
- Ability to calculate energy balance of in chemical and biological process; calculate heat of reaction for bioprocess reaction.
- Ability to calculate mass balance in recycle, multistage and fed-batch system
- 4. Ability to calculate mass and energy balances unsteady state condition

PTT 201/4 THERMODYNAMICS

Course Synopsis

This course introduces students to the basic thermodynamics for engineering application and problem solving. The course covers first and second laws of thermodynamics, substances properties, closed system energy, entropy and engineering applications of gas power cycles, refrigeration, compression and heat pumps, and chemical reactions.

Course Outcomes

- Ability to recognize and apply the fundamental basic properties, as well as the law of thermodynamics.
- Ability to calculate heat, work and other thermodynamics properties ideal fluid in given processes.
- 3. Ability to solve problems for real fluids using volumetric equations of state.
- Ability to apply thermodynamics properties from available data by using appropriate tools.
- Ability to examine specific equations of state or correlations that are appropriate for treating given problems.

PTT 202/3 ORGANIC CHEMISTRY FOR BIOTECHNOLOGY

Course Synopsis

This course covers the bioorganic compound and analytical techniques commonly used in biochemical works and categorized under spectroscopy, chromatography and electro analytical methods. This course also discusses proteins, lipid and other substances which may be necessary to detect and measure bioorganic compound or which can be very useful in variety of analytical methods. This course is complemented by explanation on chemical nature and methods of analysis of carbohydrates, amino acids, proteins and lipids.

Course Outcomes

- Ability to demonstrate the mechanism and synthesis of bio organics compound.
- Ability to describe the utilization of biological materials for analytical purposes.
- Ability to discuss analytical methods for the isolation and purification of biomolecules.

PTT 203/3 BIOCHEMICAL ENGINEERING

Course Synopsis

This course focuses on the interaction between chemical engineering, biochemistry and microbiology. Mathematical representations of microbial systems are featured among lecture topics. Kinetics of growth, death and metabolism are also covered. Batch and continuous fermentation and enzyme technology are included. The laboratory exercises introduce students to the fundamental practices in biochemical engineering.

Course Outcomes

- Ability to differentiate types of enzymes and calculate enzyme kinetics Ability to interpret ingredients and nutrition in food.
- Ability to illustrate the immobilization of enzyme process and discuss application of enzyme catalysis.
- Ability to calculate the microorganism growth kinetics in batch and continuous culture.
- 4. Ability to calculate the stoichiometry of growth and product formation.

PTT 204/3 APPLIED FLUID MECHANICS

Course Synopsis

This course emphasizes fundamental concepts and problem-solving techniques. Topics to be covered include fluid properties, static and kinematics, control volume analysis, momentum analysis of flow system, dimensional analysis, internal flows (pipe flows), differential analysis, and external flows (lift and drag).

Course Outcomes

- Ability to demonstrate the essential parameters describing a fluid system and recognize the common devices used in measuring pressure and flow rates and turbo machineries.
- 2. Ability to calculate pressures, forces, and stability in static fluid systems and distinguish the link between conserved quantities and the equations of fluid mechanics.
- 3. Ability to calculate control volumes and surfaces for developing the equations of fluid mechanics

PTT 205/4 HEAT AND MASS TRANSFER

Course Synopsis

This course introduces mechanisms by which heat is transferred from one body to another. This course introduces the principles of steady and unsteady heat conductions; radiation phenomena; natural and force convections; heat transport coefficients; dimensional analysis and boundary layer. The course covers heat conduction, convection and radiation, also mass transfer with special address on biological systems. Emphases are placed on formulation and application of respective mathematical models of heat and mass transfer across both physical and biological bodies.

Course Outcomes

- Ability to illustrate the conservation laws that control mass and heat transfer.
- 2. Ability to solve the ordinary and partial differential equations that result from the application of the conservation laws in biological systems.
- Ability to apply and solve mathematical models for physical and biological situations.

PTT 206/2 INSTRUMENTATION, MEASUREMENT AND CONTROL

Course Synopsis

The course deals with a number of advanced techniques, data interpretation and control of biotechnological processes. It covers modern on-line hardware sensors such are FIA, viable biomass measurement, membrane inlet mass spectrometry, flow cytometry, microcalorimetry. It also discusses model-based process diagnosis and control techniques including advances in bioprocess modeling and identification, data processing, software sensor design, and on-line control algorithms.

Course Outcomes

- Ability to illustrate the working principles of hardware sensors commonly used in biotechnological processes.
- 2. Ability to interpret model based-process diagnosis in biotechnological processes modelling.
- Ability to use and analyze adaptive and predictive Control techniques in biotechnological processes.

PTT 207/4 BIOMOLECULAR AND GENETIC ENGINEERING

Course Synopsis

The course focuses on the molecular mechanisms that underlie the regulated expression of genes, including transcription and translation, as well as basic mechanisms of DNA replication,

mutations and repair. Emphasize wil be on the molecular mechanisms of DNA replication, repair, transcription, protein synthesis, and gene regulation in different organisms. Facilitates basic knowledge in gene manipulation based on current researches and development in the field of genetic engineering. Characterization and development of cloning vector will also be covered. Among other things to be included will be DNA isolation. the tupes of enzumes used in molecular biology, insertion of foreign DNA, preparation of host cell, transformation and screening of cloned DNA as well as the making of genomic and cDNA library.

Course Outcomes

- Ability to differentiate the mechanisms of DNA replication, transcription, and translation in prokaryotic and eukaryotic cells.
- Ability to demonstrate types of mutations and their repair mechanisms as well as to discuss gene regulation activity in prokaryotes and eukaryotes.
- Ability to analyze relevant information and experimental data in genetic engineering.

PTT 301/3 SAFETY AND HEALTH IN BIOLOGICAL PROCESS

Course Synopsis

This course covers the regulatory procedure dealing with biological process. The students are also exposed to hazard identification, risk assessment, biosafety level and health surveillance program. Besides, the students also will be taught on fundamental aspect in emergency response plan relevant to biological process.

Course Outcomes

1. Ability to categorize the different laboratory levels and class of biosafety.

- Ability to analyze process safety to identify the biohazard and risk in the industry.
- 3. Ability to write and describe health surveillance program.
- Ability to use emergency response plan and biological waste decontamination guideline relevant to biological process.

PTT 302/3 DOWNSTREAM PROCESSING TECHNOLOGY

Course Synopsis

This course introduces basic and advanced skills in separation technology related to biotechnology. The course covers common separation techniques which include precipitation, centrifugation, solvent extraction and different types of chromatographic techniques. Other important separation processes will also be covered.

Course Outcomes

- Ability to demonstrate methods to purify biologically processed materials.
- 2. Ability to choose equipment and steps required in bio separation systems.
- 3. Ability to analyze and compare alternative separation approaches and systems.
- 4. Ability to choose appropriate instrumentation for bio separation applications.

PTT 303/2 PROCESS MODELLING AND SIMULATION

Course Synopsis

The course covers material and energy balances, equipment sizing, and costing, environmental impact assessment and process design for single and continuous processes. Students are exposed to the usage of SuperPro design software for modeling and simulation purposes. Subsequently, sustainability assessment, emphasizing on economic and profitability analysis will also be covered.

Course Outcomes

- Ability to solve engineering calculation like mass and energy balance, stoichiometry, and kinetics of the bioprocess.
- Ability to apply process and differentiate unit operation in bioprocess using simulation software
- 3. Ability to analyze economic data and apply environmental impact and sustainability assessment.

PTT 304/3 FERMENTATION TECHNOLOGY

Course Synopsis

This course covers both theoretical and practical aspects of fermentation and bioprocess technology. It also describes several fermentation processes involved in the production of industrial chemical metabolites such as alcohol, organic acids, proteins, enzymes and antibodies.

- Ability to differentiate various fermentation methods including the control parameters
- 2. Ability to calculate mass balances stoichiometry and microbial growth kinetics in batch, fed-batch and continuous fermentations.
- Ability to calculate sterilization times, aeration requirement and capacities of batch, fed-batch and continuous fermentation.
- 4. Ability to illustrate the principles of up and down-scaling of fermentation processes and primary recovery methods.

PTT 305/3 CELL AND TISSUE CULTURE TECHNOLOGY

Course Synopsis

This course will introduce the students to the basic knowledge of plant and animal cell culture. The course will cover on the media preparation, aseptic techniques and sterilization, techniques of cultivation as well as applications of plant and animal cell culture.

Course Outcomes

- Ability to operate laboratory equipments, media and sterilization methods for plant and animal culture.
- 2. Ability to differentiate techniques involved in animal and plant tissue culture.
- Ability to apply the principle of plant and animal tissue culture technology in industrial biotechnology.

References

- Sathyanarayana, B. N. and Varghase, D. B. (2007) Plant tissue culture: Practices and new experimental protocols. I. K. International Pvt. Ltd.

PTT 306/3 NUTRACEUTICALS PROCESSING TECHNOLOGY

Course Synopsis

The subject covers a broad spectrum of functional foods and nutraceuticals from biological material, applications of engineering techniques in functional food production, process engineering and modeling, functional food bioavailability, to product quality. The emphasis is on (1) applications of various techniques such as high pressure, supercritical fluid, membrane, microencapsulation, and molecular distillation in the processing of functional foods; (2) stability of bioactive components and antioxidative properties during processing and shelf life; (3) improvement in bioavailability of bioactive components by physical and chemical methods: and (4) mechanisms of antioxidant action and clinical and epidemiological evidence of functionality.

- Ability to apply techniques in the processing of functional foods and nutraceuticals.
- Abilitity to analyze stability
 of bioactive components and
 antioxidative properties during
 processing and shelf life.

 Ability to analyze and test bioprocessing technology for production of nutraceutical compounds.

PTT 307/3 INDUSTRIAL MICROBIOLOGY

Course Synopsis

This course explores microbiological industry development, scope of microbiological industries, microbes in microbiological industries,

biomass and metabolite production, microbes in bioremediation and in waste treatment industries. The course also refreshes microbial fundamentals and strain improvement for new products and productivity improvement.

Course Outcomes

- Ability to apply fundamentals of microbial physiology and metabolisms in the production processes of industrial products.
- Ability to classify microbiological processes involved in applications production of a range of industrial products.
- Ability to illustrate current development trends in the field of industrial microbiology and biotechnology.

PTT 308/4 FINAL YEAR PROJECT 1

Course Synopsis

A short-termed research project that inclined towards engineering operations for producing new biotechnological products is necessary for a final-year student. The student will be given an engineering problem (or encourage to identify on their own) and gain expertise by problem solving, investigation, research writing and effective presentation of the research outcome in the form of thesis and seminar. The area of research mainly on fermentation, enzyme technology, bioconversion and natural products and nutraceuticals technologies.

- 1. Ability to apply and integrate theory and practical to solve the engineering problems.
- Ability to develop suitable research methodology for the project.

- Ability to present and defend effectively project proposal to selected audience.
- Ability to identify commercialization potential for proposed project.

PTT 309/3 FOOD TECHNOLOGY

Course Synopsis

This course covers multidisciplinary field of applied physical sciences combines science, microbiology, and engineering education for food and related industries. Topics to be covered include introduction to food engineering, food ingredients, nutrition, nutritional information, spoilage, food production systems, preservation processes, freezing, drying, direct-heating, radiation, extrusion and packaging, freezing, texturization, mechanical separation and food biotechnology.

Course Outcomes

- 1. Ability to differentiate the principles of food engineering operations.
- 2. Ability to interpret ingredients and nutrition in food.
- Ability to analyze problems involved in food engineering operations.
- Ability to analyze genes involved in plant development and reproduction and improvement of quality and productivity of food materials.

PTT 310/2 WASTE MANAGEMENT AND UTILIZATION

Course Synopsis

The subject covers the main aspects of utilization of the food industry waste and the treatments necessary to discard waste to environmental acceptors. Emphasize will be on the exigency for utilization and treatment of food waste according to the ISO 14001. The technology of anaerobic fermentation for biogas production, specific degradation of solid wastes including their direct practical applicability, as well as composting of agricultural and food waste are will be addressed accordingly.

Course Outcomes

- Ability to demonstrate methods to purify biologically processed materials
- 2. Ability to choose equipment and steps required in bio separation systems.
- Ability to analyze and compare alternative separation approaches and systems.
- Ability to choose appropriate instrumentation for bio separation applications.

PTT 311/3 ENZYME TECHNOLOGY

Course Synopsis

The course covers basic enzymology, including properties, classification, kinetics and action mechanisms and immobilization of enzyme. This course also introduces principles and techniques of enzyme extraction and purification. Topic on utilization of enzymes in industrial and medical field will also be introduced.

Course Outcomes

- 1. Ability to explain fundamentals of enzyme kinetics.
- Ability to discuss the current and future trends of enzymes applications in bio-analysis, biotechnology and industrial sectors.
- Ability to choose appropriate techniques for extraction and purification of enzymes/ proteins.
- 4. Ability to demonstrate methods for enzyme immobilization and the characterization of immobilized enzymes kinetics.

PTT 312/3 BIOACTIVE COMPOUNDS EXTRACTION TECHNOLOGY

Course Synopsis

The course discusses different tupes of extraction methods for extraction of bioactive compounds from plants. It also covers overview of the fundamentals of heat and mass transfer as well as the thermodynamics of the processes of steam distillation, distillation, low-pressure solvent extraction (solid-liquid) from vegetable matrices, high-pressure extraction from vegetable matrices, and liquidliquid extraction and adsorption. which are processes used to obtain high-quality bioactive extracts and purified compounds from botanical sources.

Course Outcomes

 Ability to distinguish different extraction methods of bioactive compounds from plant materials.

- Ability to analyze and test various types of extraction methods
- Ability to demonstrate various bioactive compound extraction methods.

PTT 313/3 BIOENERGY PRODUCTION TECHNOLOGY

Course Synopsis

The course explains in detail global energy sources, fossil fuels, and renewables, Biomass Feedstocks, biofuels, processing conditions and alternative applications of biorenewable feedstocks. Liquid and Gaseous Biofuels, including main liquid biofuels such as bioethanol. biodiesel, biogas, biohudrogen, liquid and gaseous fuels from the Fischer-Tropsch sunthesis are addressed in detail. Discussion on Thermochemical Conversion Processes covers the utilization of biorenewables, Biofuel Economy and Biofuel Policy are also included.

Course Outcomes

- Ability to differentiate different sources and types of bioenergy.
- 2. Ability to analyze economic and environmental impact of bioenergy.
- 3. Ability to demonstrate production process of bioenergy.

PTT 333/3 ENGINEERING TECHNOLOGY MANAGEMENT

This course aims to teach students on how to apply the project management skills and economic techniques in evaluating the design. The role of economics is to assess the appropriateness of a given project, estimate its value, and justify it from an engineering technology standpoint. At the end of the course, students will be able to identify and discuss issues and challenges faced by

engineering technologist relating to project management in the current economic scenarios.

Course Outcomes

- Ability to evaluate the process of project management, develop work plans, do cost estimation and perform project evaluation.
- Ability to evaluate economic scenarios and apply decision making process to engineering project and business venture.

PTT 401/6 FINAL YEAR PROJECT II

Course Synopsis

A short-termed research project that inclined towards engineering operations for producing new biotechnological products is necessary for a final-year student. The student will be given an engineering problem (or encourage to identify on their own) and gain expertise by problem solving. investigation, research writing and effective presentation of the research outcome in the form of thesis and seminar. The area of research mainly on fermentation. enzyme technology, bioconversion and natural products and nutraceuticals technologies.

Course Outcomes

- Ability to apply and integrate theory and practical to solve the engineering problems.
- 2. Ability to develop suitable research methodology for the project.
- 3. Ability to present and defend effectively project proposal to selected audience.
- 4. Ability to identify commercialization potential for proposed project.

PTT 402/3 BIOTECHNOLOGY FACILITY DESIGN

Course Synopsis

This course gives complete overview on the biotechnology facilities design. Topics included in this course are the processing equipment, cleaning of process design and utilities system. This course also introduces current Good Manufacturing Practices (cGMP), regulatory features affecting process and building design and documentation for validation of biotechnology facilities.

Course Outcomes

- 1. Ability to discuss the current and future bioprocess facility based on industry demand.
- Ability to apply cGMP regulations in biotechnology facility.
- 3. Ability to design a bioprocess facility, undertake problem identification and solution.

PTT 403/2 BIOTECHNOLOGY PRODUCTS COMMERCIALIZATION

Course Synopsis

The course covers on the current status in biotechnology research and commercialization aspects of biotechnology products. Students will also learn about current issues of patenting, intellectual property and licensing of biotechnology products as well as developing business plans to meet the market needs.

Course Outcomes

- Ability to illustrate the commercial aspects of biotechnology products.
- 2. Ability to select a potential product and prepare a business plan for that particular product.
- 3. Ability to practice costing of biotechnology projects.

PTT 404/3 BIOPHARMACEUTICAL TECHNOLOGY

Course Synopsis

This course attempts to provide a balanced overview of the biopharmaceutical industry, in terms of categorizing the products currently available, and also illustrating how these drugs are produced and brought to market. It focuses on several 'traditional' pharmaceutical substances isolated from biological sources, and recently developed biopharmaceutica products.

Polypeptide-based therapeutic agents, and the potential of nucleic acid-based drugs, biopharmaceutical drug delivery, genomics and proteomics are also discussed.

Course Outcomes

- Ability to categorize various biopharmaceuticals and illustrating how these drugs are produced and brought to market.
- Ability to demonstrate production process of biopharmaceuticals.
- Ability to evaluate the application of biotechnology in the development of biopharmaceuticals.

PTT 405/3 BIOREMEDIATION

Course Synopsis

This course attempts to provide a balanced overview of the bioremediation. The topic s that covered in this courses are: type sources of contamination and pollution, bioremediation technologies in for soil and water, Types of bioremediation technologies, bioremediation of solid, liquid and gas phase and the last one is case studies for bioremediation.

Course Outcomes

- Ability to analyze and distinguish the type of bioremediation.
- 2. Ability to illustrate and solve the design consideration on each type of bioremediation.

PTT 444/3 TECHNOLOGIST IN SOCIETY

This course aims to explain the main concepts in engineering ethics, risk management and occupational safety and health as well as to expose the students to basic of law in the engineering context. The materials will be of introductory nature to enable engineers to appreciate factors that have to be taken into account in decision-making. At the end of the course,

students will be able to identify and discuss issues and challenges faced by engineers relating to engineering ethics, risk management and to understand the legal requirements related to engineering field.

 Stephen Collins, John Ghey and Graham Mills, (1994) Professional Engineer in Society, Jessica Kingsley Publishers

Course Outcome

- Ability to understand, identify and evaluate the issues and challenges of engineering ethics.
- Ability to explain and identify hazards; evaluate and review the function of risk management and occupational safety and health (OSHA).
- Ability to discuss and evaluate the aspects and procedures of legal on engineering issues.

Bachelor of Chemical Engineering Technology (Honours) (Agrofood)

Programme Educational Objectives (PEO) for Bachelor of Chemical Engineering Technology (Agrofood)

PEO 1

Graduates who are able to apply knowledge and technical skills in providing practical engineering solutions.

PEO₂

Graduates who are able to demonstrate professionalism and leadership and contribute to team success and manage projects in a multi-disciplinary environment.

PEO 3

Graduates who are able to advance in their career through adopting the advancements in engineering and technology as part of life-long learning experiences through ever changing environment.

Program Outcomes (PO) for Bachelor of Chemical Engineering Technology (Agrofood)

PO 1

Apply knowledge of mathematics, science, chemical engineering technology fundamentals and principles in specialization of agrofood to define and applied the procedures, processes, systems or methodologies.

PO₂

Solve broadly-defined chemical engineering technology problems systematically to reach substantiated conclusions, using tools and techniques appropriate to their disciplines or area of agrofood.

PO 3

Design solutions for broadly-defined chemical engineering technology problems, and to design systems, components or processes to meet specified needs with appropriate consideration for public health and safety, as well as cultural, societal, environmental and sustainability concerns.

PO 4

Plan and conduct experimental investigations of broadly-defined problems, using data from relevant sources.

PO 5

Select and apply appropriate techniques, resources and modern engineering tools with an understanding of their limitations.

PO 6

Function effectively as individuals, and as members or leaders in diverse technical teams.

PO 7

Communicate effectively with the engineering community and society at large.

PO8

Demonstrate an awareness of and consideration for societal, health, safety, legal and cultural issues and their consequent responsibilities.

PO 9

Demonstrate an understanding of professional ethics, responsibilities and norms of engineering technology practices.

PO 10

Ability to demonstrate an understanding of the impact of engineering practices, taking into account the need for sustainable development.

PO 11

Ability to understand entrepreneurship, management, and business practices.

PO 12

Recognition of the need for professional development and ability to engage in independent and lifelong learning.

Elective A (Food Technology)

- 1. PTT 355/3 Natural Products, Nutraceutical, and Functional Food
- PTT 361/3 Agrofood Processing Technology
 PTT 452/3 Fermentation and Enzyme Technology

Elective B (Food Engineering)

- 1. PTT356/3 Process Modeling and Simulation in Food Engineering
- 2. PTT362/3 Design and Optimization in Food Processing
- 3. PTT453/3 Food Storage and Shelf-life

Course Syllabus

PTT 150/3 ELECTRICAL & ELECTRONIC TECHNOLOGY

Course Synopsis

This course introduces basic electrical circuit theory and analogue electronics which enables students to analyze basic DC and AC circuits and to get familiar with the fundamental electronic components such as operational amplifiers and semiconductor diodes.

Course Outcomes

- 1. Ability to demonstrate application of the key principles of DC circuit theory including Kirchhoff's laws of current and voltage, and rules for current and voltage division.
- 2. Ability to explain the operation of ideal and non-ideal operational amplifier circuits and design simple operational amplifier applications.
- 3. Ability to describe simple AC series and parallel circuits using phasors and complex numbers.
- 4. Ability to explain the operation of semiconductor devices.

PTT 151/3 ORGANIC CHEMISTRY

Course Synopsis

This course introduces the fundamental theories of atomic orbital, molecular orbital and hybridization with extensive coverage on the properties and reactions involved towards the food engineering technology application.

Course Outcomes

 Ability to apply the basic concepts such as the atomic orbital theory and molecular orbital theory and identify the functional groups like alkanes, alkenes and aromatic compounds.

- Ability to differentiate the chemical and physical properties of each functional groups and carry out theoretical reaction mechanism at molecular level.
- Ability to analyse the chemical, physical properties and reactions of alcohol, ether, aldehyde, ketone and carboxylic acids.
- 4. Ability to design the knowledge of organic chemical process in food engineering technology application.

PTT 152/2 INTRODUCTION TO FOOD SCIENCE

Course Synopsis

This course covers a broad spectrum of food sciences from food constituents, applications

Course Outcomes

- Ability to discuss the constituents of foods in terms of properties, significance and nutritive aspects.
- Abilitity to choose quality factors in foods to prevent food deterioration and its control including food packaging.
- Ability to analyze the new processing technology of food products, food safety issues and goverment regulation related to food engineering technology.

PTT 153/3 FOOD MICROBIOLOGY

Course Synopsis

This course covers a broad spectrum of food microbiology in food industry with a strong emphasis on the history, habitats, taxonomy, and growth parameters of microorganisms in food and their products in foods which further related to food preservation as indicators of food safety, quality and foodborne diseases.

Course Outcomes

- Able to discuss the history, habitats, taxonomy, and growth parameters of microorganisms in food.
- Able to interpret types of microorganisms and/ or their products in foods. Food preservation and some properties of psychrotrophs, thermophiles, and radiationresistant bacteria.

 Able to distinguish indicators of food safety and quality, principles of quality control, microbial criteria and foodborne diseases.

PTT 154/2 COMPUTER AIDED DRAFTING

Course Synopsis

This course introduces the use of technical drawing in an effective way for communicating and integrating with engineering concept which covers the geometry, parallel projections, sectional

Course Outcomes

- 1. Ability to apply geometric construction techniques for engineering drawings.
- Ability to apply completes 2-D and 3-D drawings pertaining to geometric transformations, projections and multiple views.
- Ability to evaluate use of engineering drawings for curve, surfaces and geometric models.

Practice (Computer Aided Chemical Engineering). Elsevier Science.

PTT 155/3 MATERIAL AND ENERGY BALANCE

Course Synopsis

This course covers the basic understanding of material and energy balances through a systematic treatment of single and multiple unit operations, reactive and non-reactive processes, recycle and bu-pass, extent of reactions, equations of state, vapour-liquid phase equilibrium, solid-liquid phase equilibrium, internal energy and enthalpy changes for process fluids undergoing specified changes in temperature, pressure, phase, reactions and chemical compositions and computer aided simulation of process flow diagrams.

Course Outcomes

- Ability to apply the basic concepts of conservation of mass and energy, including phase equilibrium, reaction equilibrium and non-ideal gas behaviour to mass and energy balances.
- Ability to understand the concepts of unit operations and how they are combined to represent a chemical process.

- Interpret physical property charts to understand phase equilibrium.
- To analyze the mass and energy balances of any chemical process, for both steady and unsteady state situations.

PTT 156/4 CROP, LIVESTOCK AND FISHERY SCIENCE

Course Synopsis

The subject covers a broad spectrum of an introductoru foundation of crops, animals and fisheries sciences and technology which emphasize on the fundamental aspects of horticulture science such as anatomy and morphology of crops. plant nutrition, soil fertility, methods of plant propagation, various horticultural practices, some basic biology of animals including cell function, genetics, anatomy and physiology, reproduction, nutrition, animal health and disease, animal products, and animal behavior, fish eggs and larvae..

Course Outcomes

- 1. Ability to apply fundamental of horticulture science and discusses the topics like anatomy and morphology, plant nutrition, soil fertility, plant propagation.
- Abilitity to distinguish basic biology of animals including cell function, genetics, anatomy and physiology, reproduction, nutrition, animal health and disease, animal products, and animal behavior.

 Ability to analyze from fish eggs and larvae to a number of contributions to fishery sciences for accurate assessment and management of fish populations.

PTT 157/3 FOOD CHEMISTRY

Course Synopsis

This course provides students with knowledge on the chemical constituents of food, their functional significance in food systems and chemical transformation of these components in relation to food quality. The role of chemical

additives and genetically modified organisms in food production is also discussed.

Course Outcomes

- Ability to classify and describe the function of the chemical constituents of food contributes to the overall quality of foods.
- Ability to analyze the important chemical and biochemical reactions that occur during the storage and processing of important classes of food products.
- Ability to recognize the technologies used in the genetic modification of living organisms and explain the applications of the technologies to food production.

PTT 250/3 THERMODYNAMICS

Course Synopsis

This course introduces students to the basic thermodynamics for engineering application and problem solving which covers the first and second laws of thermodynamics, substances properties, closed system energy, entropy and engineering applications of gas power cycles, refrigeration, compression and heat pumps, and chemical reactions.

Course Outcomes

- 1. Ability to recognize and apply the fundamental basic properties, as well as the law of thermodynamics.
- Ability to calculate heat, work and other thermodynamics properties ideal fluid in given processes.
- Ability to solve problems for real fluids using volumetric equations of state.
- 4. Ability to apply thermodynamics properties from available data by using appropriate tools

PTT 251/3 Fluid Mechanics

Course Synopsis

This course covers the fundamental concepts and problem-solving techniques on fluid properties, static and kinematics, control volume analysis, momentum analysis of flow system, dimensional analysis, internal flows (pipe flows), differential analysis, and external flows (lift and drag).

Course Outcomes

 Ability to demonstrate the essential parameters describing a fluid system and recognize the common devices used in measuring pressure and flow rates and turbo machineries.

- Ability to calculate pressures, forces, and stability in static fluid systems and distinguish the link between conserved quantities and the equations of fluid mechanics.
- Ability to calculate control volumes and surfaces for developing the equations of fluid mechanics.

PTT 252/3 ENGINEERING PROPERTIES OF BIOLOGICAL MATERIALS

Course Synopsis

This course introduces the properties of biological materials and to encourage students to be able to identify physical properties of materials required for analysis and analyze the design of agricultural, food and biological systems based on the available data or experimentally measure the property by referring on existing methods and theories.

Course Outcomes

- Ability to explain physical attributes of materials required for analysis and design of microorganism, food and biological systems
- 2. Ability to illustrate concept and techniques of thermal and rheological properties of biological materials.
- Ability to calculate thermal and electromagnetic properties of biological materials.
- Ability to illustrate concepts and principles of water activity, handling, storage and moisture management of biological materials.

PTT 253/2 FOOD PRODUCT DEVELOPMENT AND COMMERCIALIZATION

Course Synopsis

This course covers the key aspects of commercializing innovation from ideation, sourcing, intellectual property considerations, valuation and implementation to market launch which combine current

theoretical practices with case studies from food industry to illustrate the subject matter.

Course Outcomes

- Able to analyze the different categories of new food products by identifying specific aspects of product development in the food industry.
- Able to create new knowledge in design, development and commercialization and manage the need to ensure the necessary product, processing, distribution and marketing knowledge in the food company.
- Able to assess on evaluating and improving product development include the collection of knowledge from the project, analysis of the knowledge and setting improvements for future projects.

PTT 254/2 FOOD BIOTECHNOLOGY

Course Synopsis

This course introduces the students to the concept of biotechnology and later to its application in food production with extension on the fermentation technologies. genetic engineering on plant and animal for production of various food ingredients, cells functional food ingredients and their health benefits, probiotics, antibody production for oral vaccines, several topics on enzyme technologies, and management of several aspects of food safety issues, bioprocessing, and fermentation biotechnologies used across the globe.

Course Outcomes

 Ability to apply the basic principles of microbiology, fermentation technologies,

- aspects of genetic engineering for production of various food ingredients, and several other specialized topics involving microbial systems.
- Abilitity to examine the plant tissue culture techniques, genetic engineering of plants and animals, functional food ingredients and their health benefits, probiotics, antibody production for oral vaccines, and several topics on enzyme technologies.
- Ability to manage several aspects of food safety issues, bioprocessing, and fermentation biotechnologies used across the globe.

PTT 255/3 PROCESS HEAT AND MASS TRANSFER

Course Synopsis

This course introduces the principles of steady and unsteady heat conductions, radiation phenomena, natural and force convections, heat transport coefficients, dimensional analysis and boundary layer, heat conduction, convection and radiation, also mass transfer with special address on food systems. With a strong emphasis on formulation and application of respective mathematical models of heat and mass transfer across both physical and biological bodies.

Course Outcomes

- Ability to illustrate the conservation laws that control mass and heat transfer.
- Ability to solve the temperature distributions in solids and in laminar flow with independent variables and radiation heat transfer
- Ability to calculate the concentration distributions in solids and laminar flow with independent variables

PTT 256/3 REACTION KINETICS AND REACTOR DESIGN

Course Synopsis

This course integrates the concepts of reaction kinetics with those of conservation of energy and mass to form a basis for designing common types of reactors for operation under both isothermal and non-isothermal conditions. The design of reactor emphasizes on the homogenous type reactor and an introduction to heterogeneous reactor design.

Course Outcomes

 Ability to employ reaction kinetics and mechanism of chemical reaction in homogeneous systems.

- 2. Ability to examine the mechanism of chemical reactions on surface.
- 3. Ability to analyze the chemical reactor theory and design real reactors.
- Ability to examine the thermal effects in the real reactors and identify reactions in heterogeneous systems.

PTT 257/3 INSTRUMENTATION AND PROCESS CONTROL IN FOOD

Course Synopsis

This course deals with a number of engineering skills, flow injection analysis and monitoring which includes the studies on valves system implemented in food industries, the related Process flow diagram and the methods and softwares applicable in piping and instrumentation diagram.

Course Outcomes

- Ability to illustrate the working principles of hardware sensors commonly used in biotechnological processes.
- 2. Ability to interpret model based-process diagnosis in biotechnological processes modeling.
- 3. Ability to use and analyze adaptive and predictive Control techniques in biotechnological processes.

- Manabendra Bhuyan. (2006). Measurement and Control in Food Processing. CRC Press.

PTT 258/2 FOOD PACKAGING TECHNOLOGY

Course Synopsis

The course introduces the basic knowledge on food packaging materials, equipments and technology with an overview of the packaging science and technology applied to the preservation and shelf life, distribution and marketing of various food products, different procedures involved and food safety requirements for developing, evaluating and testing of food packages in accordance to international standards.

Course Outcomes

 Ability to Demonstrate the importance and functions of a packaging system in relation to food preservation.

- 2. Ability to Analyze the properties, economic use and manufacture of packaging materials (glass, plastic, paper and aluminum).
- Ability to Analyze how packaging materials interact with diverse food products to maximize quality and shelf-life of the products.

PTT 350/3 UNIT OPERATIONS IN FOOD INDUSTRIES

Course Synopsis

This course covers the application of basic knowledge of engineering principles such as momentum,

heat and mass transfer on the design a variety of food processes equipments. It also covers in detail the most common food engineering unit operations, including guidance for students in carrying out specific design calculations with several laboratory experiments.

Course Outcomes

- Ability to apply engineering principles in order to develop a basic design of momentum transfer unit operations
- 2. Ability to apply engineering principles in order to develop a basic design of heat and mass transfer unit operations
- Ability to apply and calculate any related problems regarding unit operations in food industries based on basic engineering principles

PTT 351/2 HALAL FOOD PRODUCTION

Course Synopsis

This course discusses the fundamentals to be considered in halal food production. It also covers specific halal production requirements for meat, poultry, dairy products, fish, seafood, cereal, confectionary, and food supplements. It provides the students knowledge on guidelines in halal food production including labeling, packaging, and coating as well as discussion in application of genetically modified organisms (GMOs).

Course Outcomes

 Ability to analyze halal food laws and regulations, general guidelines for halal food production, international and domestic trade in

- halal products and import requirements for different countries
- Ability to prepare halal production requirements for meat and poultry, dairy products, fish and seafood, cereal and confectionary and nutritional food supplements.
- Ability to assess on gelatin, enzymes, alcohol and food ingredients in halal food production.
- 4. Ability to choose labeling, packaging, and coatings for halal food, compare biotechnology and GMO ingredients in halal food, animal feed and halal food, select comparison of kosher, halal, and vegetarian and select how to get halal certified

PTT 352/3 FOOD PROCESS ENGINEERING

Course Synopsis

This course covers multidisciplinary field of applied physical sciences combines science, microbiology, and engineering education for food and related industries. It also covers the topics of introduction to food engineering, preservation processes, refrigeration, freezing, evaporation, dehydration, membrane separation, extrusion and packaging.

Course Outcomes

- Ability to apply the basic chemical engineering principles in food processing
- Ability to design the process involved in food engineering operations
- Ability to evaluate the problems involved in food engineering operations

- Singh, R. L. and Heldman D. R. (2009). Introduction to Food Engineering, 4th Edition. Academic Press, Elsevier.

PTT 353/3 INDUSTRIAL SAFETY AND HEALTH IN FOOD PROCESSES

Course Synopsis

This course covers the regulatory procedure dealing with food process. It provides students knowledge in hazard identification, risk assessment, biosafety level and health surveillance program as well as fundamental aspect in emergency response plan relevant to food processes.

Course Outcomes

- 1. Ability to categorize the different laboratory levels and class of biosafety.
- Ability to analyze process safety to identify the biohazard and risk in the industry
- 3. Ability to write and describe health surveillance program
- Ability to use emergency response plan and food waste decontamination guideline relevant to biological process

PTT 354/3 FOOD SENSORY AND EVALUATION

Course Synopsis

This course introduces the sensory sciences and evaluation of food based on human senses which affected by factors of nature and presentation of specific food matrix, the age, gender, background, sensory sensitivity of the consumer and the conditions under the test is carried out. The introduction of

statistical method in evaluation establishes the credibility of a potential new food product or the effectiveness of a modification to a new food product.

Course Outcomes

- Ability to describe the fundamental requirements and procedures of food sensory evaluation.
- 2. Ability to demonstrate practical proficiency in food sensory evaluation laboratory
- 3. Ability to select the appropriate test methods when presented with a practical problem and apply statistical principles to food sensory evaluation

- Lawless, H. T. and Heymann, H. (2010). Sensory Evaluation of Food, Principle and Practices, 2nd Edition. Springer.

PTT 355/3 NATURAL PRODUCTS, NUTRACEUTICAL AND FUNCTIONAL FOOD

Course Synopsis

The subject covers a broad spectrum of functional foods and nutraceuticals from biological material, applications of engineering techniques in functional food production, process engineering and modeling, functional food bioavailability, to product quality.

Course Outcomes

- Ability to apply techniques in the processing of functional foods and nutraceuticals.
- Abilitity to analyze stability of bioactive components and antioxidative properties during processing and shelf life.
- Ability to analyze and test Bioprocessing Technology for Production of Nutraceutical Compounds.

PTT 356/3 PROCESS MODELING AND SIMULATION IN FOOD ENGINEERING

Course Synopsis

This course covers the process modeling and management in food production which encompasses the deductive modeling and optimization as well as the problem decomposition in the information technology. It also covers the kinetic modeling and heat and mass transfer modeling using various related equations.

Course Outcomes

- Ability to analyze the food modeling and management with the information technology.
- Ability to develop kinetic modeling of food production and the heat and mass transfer in food processina.
- Ability to evaluate the combined discrete and/or continuous modeling and the data mining of input and output characteristics.
- Ability to develop the process modeling for vegetables and fruit processing and productions.

- Knopf, C. (2011). Modeling, Analysis and Optimization of Process and Energy Systems. Wiley.

- Mittal. (1996). Computerized Control Systems in the Food Industry (Food Science and Technology). CRC Press.

Course Synopsis

This is an individual research project in connection with a special engineering problem and under the guidance of an academic staff. It provides students the knowledge and guidance on proposal writting of a research project which consisted of several chapters including introduction, literature review, methodologies, expected result and research milestones.

Course Outcomes

- Ability to identify and create research objective also problem statement.
- Ability to review information source then recognize, construct and justify the suitable research information.
- Ability to report and perform the information in the form of dissertation format
- 4. Ability to describe, explain and defend effectively in the form of proposal defends.

PTT 358/3 FOOD ENGINEERING FACILITY DESIGN

Course Synopsis

This course gives complete overview on the food engineering facilities design which covers the economical evaluation, reasons to design new or extended facility, process and equipment selection, project management and operation. This course also introduces Good Manufacturing Practices (GMP), regulatory features affecting process and building design and documentation for validation of food engineering facilities.

Course Outcomes

- Ability to discuss the current and future food facility based on industry demand and economic evaluation.
- Ability to apply GMP regulations, project management and operation in food facility design.
- 3. Ability to design a food engineering facility based on process and equipment selection, problem identification and solution.

- Clark, J. P. (2008). Practical Design, Construction and Operation of Food Facilities. Academic Press, Elsevier.

PTT 359/3 FOOD WASTE MANAGEMENT AND UTILIZATION

Course Synopsis

This course covers the food sources of pollution, their effect on the environment and properties of food waste materials. It also covers the physical, chemical and biological treatment processes of food wastes in relation to pollution control and waste utilization in relation to pollution problems and technologies for utilization for sustainable environmental.

Course Outcomes

- To decide and recommend the suitable physical, chemical and/or biological treatment of industrial and organic food wastes.
- To analyze and design systems for the collection, handling, treatment and utilization of wastes.
- To plan and proposed the suitable utilization technique for food waste and wastewater to sustain an environmental.

PTT 360/3 QUALITY MANAGEMENT SYSTEM IN FOOD PRODUCTION

Course Synopsis

This course covers the integration of all functions and processes within an organization in order to achieve continuous improvement of the quality of food production. It also covers hazard analysis critical control point (HACCP), good manufacturing practice (GMP), and other quality assurance procedures.

Course Outcomes

- Ability to identify any qualitybased problems with having a strong affective set of quality management systems in food production resources.
- Ability express the basic knowledge of food chemistry, allergens, food law, sanitation, microbiology, engineering, packaging technology, environmental science, safety practices, product development and computer application
- Ability to implement and manage Kosher, organic, vegan and Halal certification or any combination thereof.

PTT 361/3 AGROFOOD PROCESSING TECHNOLOGY

Course Synopsis

This course covers the improvement and development of cereal products and processes which provides an understanding of the impact of processing and storage conditions on the physical properties and structure of pre- and post-processed materials. It also focusses on the techniques of several cereal processing technologies, including baking, pasta extrusion, and high-temperature extrusion, as well as cookie and cracker production.

Course Outcomes

- Able to calculate the thermally induced transitions (glass, melting, gelatinization) in cereal flours as a function of conditions relevant to cereal processing technologies.
- 2. Able to develop the influence of moisture on the processing conditions and the physical properties of the product.
- 3. Able to estimate knowledge as a predictive tool for evaluating the performance of cereal flour during processing, and, ultimately, for adjusting, in a rational fashion, the formulation of raw materials

and processing parameters so as to achieve desired endproduct attributes.

PTT 362/3 Design and Optimization in Food Processing

Course Synopsis

This course covers the design and quality determination of food processing and the control vector parameterization with sensitivity. It also covers the optimization, statistical optimization and multiobjective optimization in food engineering.

Course Outcomes

- Ability to analyze the conceptual design methodology for food process and the food quality development using design optimization.
- Ability to develop the control vector parameterization with sensitivity based refinement applied to baking optimization.
- Ability to evaluate the optimization and statistical optimization in food processing.

PTT 450/6 FINAL YEAR PROJECT 2

Course Synopsis

This is an individual research project in connection with a special engineering problem and under the auidance of an academic staff. The project undertaken may fall under one of the following areas: mathematical analysis. experimental tests, computer simulation, hardware and/or software development, device fabrication. It provides students the knowledge and guidance on evaluation of research findings and determination of conclusion as to be included in dissertation. It also evaluate the students' projects through oral presentation and thesis submission.

Course Outcomes

- Ability to identify the methodology of the research then organize and demonstrate experiments to collect research data.
- Ability to choose the suitable research data and synthesize the data.

- Ability to explain the data findings then describe, discuss and justify based on academic source
- Ability to originate, explain and defend effectively in the form of thesis requirement.

PTT 451/3 POST-HARVEST TECHNOLOGY

Course Synopsis

This course provides the overview on postharvest handling technology of food and agricultural produce. The course emphasizes the basic of post harvest handling technology, pre-harvest and harvest factors affecting on post harvest quality, packaging operation and appropriate equipment that relates to package the biological products, quality assurance and preparation of fresh cuts, and post harvest socio-economics.

Course Outcomes

- Ability to analyze the chemical and physical properties of agricultural and food products in order to apply the appropriate post-harvest handling technology.
- Ability to demonstrate the preharvest and harvest factors that affects on postharvest quality
- Ability to analyze the socioeconomic factors and impact to prevent loss in post-harvest operation.

PTT 452/3 FERMENTATION AND ENZYME TECHNOLOGY

Course Synopsis

This course covers both theoretical and practical aspects of fermentation and enzyme in bioprocess technology. It describes several fermentation processes involved in the food production such as alcohol, organic acids, proteins, enzymes and antibodies as well as the principles and techniques of enzyme extraction and purification.

Course Outcomes

- 1. Ability to differentiate various fermentation methods including the control parameters.
- Ability to evaluate sterilization process, design batch, fed-batch and continuous fermentations and up-steam and down-stream processing.
- Ability to demonstrate the current and future trends of enzymes applications in bioanalysis, biotechnology and industrial sectors..
- Ability to design appropriate techniques for extraction, purification, immobilization and characterization of immobilized enzymes.

PTT 453/3 FOOD STORAGE AND SHELF-LIFE

Course Synopsis

The course covers a broad spectrum of food packaging and shelf life involve in food technology. It emphasize on the role of food packaging, food packaging materials and factors controlling shelf life, shelf life testing methodology and data analysis methods suitable for the analysis of shelf life data and estimate shelf life and types of packaging suitable to be used in food products for food industry.

- Able to analyze the role of food packaging, food packaging materials and factors controlling shelf life.
- Able to arrange shelf life testing methodology and data analysis methods suitable for the analysis of shelf life data.
- Able to estimate shelf life and types of packaging suitable to be used in food products for food industry.

Bachelor of Electrical Engineering Technology (Hons) (Industrial Power)

Program Education Objective (PEO)

PEO 1

Graduates are leaders in the field of electrical engineering as demonstrated through career advancement.

PEO₂

Graduates who are members and contribute to professional society.

PEO 3

Graduates pursue continuing education opportunities.

PEO 4

Graduates make contributions through research and development.

PEO 5

Graduates who are entrepreneurs.

Programme Outcomes (PO)

PO1

Apply knowledge of mathematics, science, engineering fundamentals and engineering specialisation principles to defined and applied engineering procedures, processes, systems or methodologies;

PO2

Solve broadly-defined engineering problems systematically to reach substantiated conclusions, using tools and techniques appropriate to their discipline or area of specialisation

PO₃

Design solutions for broadly-defined engineering technology problems, and to design systems, components or processes to meet specified needs with appropriate consideration for public health and safety, as well as cultural, societal, environmental and sustainability concerns

PO₄

Plan and conduct experimental investigations of broadly-defined problems, using data from relevant sources

PO5

Select and apply appropriate techniques, resources and modern engineering tools, with an understanding of their limitations

P₀6

Function effectively as individuals, and as members or leaders in diverse technical teams

PO7

Communicate effectively with the engineering community and society at large

PO8

Demonstrate an awareness of and consideration for societal, health, safety, legal and cultural issues and their consequent responsibilities

PO9

Demonstrate an understanding of professional ethics, responsibilities and norms of engineering technology practices

PO10

Demonstrate an awareness of management, business practices and entrepreneurship

PO11

Demonstrate an understanding of the impact of engineering practices, taking into account the need for sustainable development

PO12

Recognise the need for professional development and to engage in independent and lifelong learning

COURSE SYLLABUS

PLT101/3 COMPUTER PROGRAMMING

Course Synopsis

One of the aspects of a good engineer is to have the capability of integrating the hardware and the software, thus an electrical engineer should be competence in programming. This course introduces basic programming usina hiah level lanauaae (C language). The main objective of this course is to prepare the students with the ability of problem solving with programming, familiarize with the programming tools such as organization chart, flowchart and pseudo code and then to implement them by developing C program.

Course Outcomes

- **CO1:** Ability to differentiate programming concepts and principles.
- **CO2:** Ability to apply programming techniques and tools such as flowchart and pseudo code to design computer programs.
- **CO3:** Ability to design engineering related problems using computer programming techniques.

PLT102/2 COMPUTER AIDED DRAFTING (CAD)

Course synopsis

The main objective of this course is to expose the Bachelor Engineering Technology students with skills of Computer Aided Drafting and its application. This course is an extension from manual hand drawing into the usage of AutoCAD software which focuses on product design in 2D and 3D.

Course Outcomes

- **CO1:** Ability to apply fundamental concepts of Computer Aided Drafting in electrical engineering related problems.
- CO2: Ability to illustrate engineering drawing by using proper techniques.

CO3: Ability to use of Computer Aided Drafting to construct a simple product design and apply to engineering areas.

PLT104/3 ENGINEERING SCIENCE

Course synopsis

This course aims to introduce to the Electrical Engineering students the knowledge on the principles of material engineering and thermal fluid. It includes aspects related to material engineering, thermodynamics and fluid mechanics.

CO1: Ability to apply the Mechanical, Electrical and Magnetic properties of materials.

CO2: Ability to analyze using concepts and principles of Fluid Statics, Bernoulli and Energy Equations.

CO3: Ability to analyze using concepts and principles of First Law and Second Law of Thermodynamics.

PLT105/3 ELECTRIC CIRCUIT THEORY 1

Course Synopsis

This course covers topics of introduction to the DC circuit's covers fundamental laws and

theorems. Students also get knowledge about AC circuits that introduces phasors and sinusoidal steady state analysis. This course intends to give the students knowledge on understanding three-phase balance systems.

Course Outcomes

- **CO1:** Ability to apply important equations to solve problems in DC circuits.
- CO2: Ability to analyze the first and second order circuits containing passive elements, DC sources and switches using differential equations.
- CO3: Ability to calculate circuit parameters containing sinusoidal steady-state sources using complex impedances and phasor representations.

PLT106/3 DIGITAL ELECTRONICS

Course Synopsis

The aim of this course is to introduce students to the basic knowledge in the digital electronics. This course focuses the introduction and discussion of the fundamental of digital circuit design and analysis. The lectures cover the following topics: Numbering System, Algebraic Switching, Boolean Function, Combinational Logic Design and Sequential Logic Design.

- **CO1:** Ability to explain and use the basic principles of numbering system and basic theory of binary system in digital electronics.
- **CO2:** Ability to design and optimizes logic circuit using Boolean functions and Karnaugh maps.
- **CO3:** Ability to design digital system applications using combinational and sequential logic design techniques.

PLT107/3 ELECTRONICS 1

Course Synopsis

This subject will expose the students with basic electronic devices. It provides a depth study on the concept of PN junction, operation and characteristics of the diode. The students will be emphasized to Half wave rectifiers, Full wave rectifiers, Power Supply Filter and Regulators, Clipper and Clamper Diode circuits and Voltage Multipliers. The students also will learn about the special-purpose of zener diode in terms of its characteristics and applications. Bipolar Junction Transistors (BJTs) and various types of Field-Effect

Transistor which are Junction Field-Effect Transistor (JFET) and the Metal Oxide Semiconductor Field-Effect Transistor (MOSFET) will be introduced in this course as well. Basic theories, principles and practical are stressed in this course.

Course Outcomes

- **CO1:** Ability to explain and describe the fundamental concepts of electronic devices..
- CO2: Ability to explain and calculate the basic operations of electronic devices such as diode, BJT and various types of FET
- **CO3:** Ability to calculate and analyze the basic biasing circuits using datasheet.

PLT108/3 ENGINEERING SKILLS II

Course Synopsis

This course contains 3 modules to provide students with engineering skills such as Printed Circuit Board (PCB) for fabrication and design module, computer assembly, formatting, networking and electrical domestic wiring.

Course Outcomes

- **CO1:** Ability to apply and construct the basic skills and standard practiced of domestic electrical wiring.
- **CO2:** Ability to apply and construct the basic skills and standard practiced of PCB and electronic component fitting.
- **CO3:** Ability to apply and construct the basic skills and standard practiced of computer assemble and networking

PLT201/3 ELECTRIC CIRCUIT THEORY II

Course Synopsis

This course will introduce the students to the Laplace and Fourier Transform concept. The student also will expose to analyse the electrical circuit by using Laplace and Fourier Transform. The concepts of mutual inductance, frequency response of AC circuit and two port networks would also be covered to the students.

Course Outcomes

- **CO1:** Ability to explain and analyze special types of circuit such as mutual inductance and two port networks.
- CO2: Ability to analyze electric circuits using Laplace Transform, Fourier Series and Fourier Transform for the circuit comprising passive elements.
- CO3: Ability to analyze the concepts of frequency response for AC circuits and construct Bode plot for various types of transfer function.

PLT202/3 MEASUREMENT & INSTRUMENTATION

Course Synopsis

This course covers the basic concepts of modern measurement and instrumentation system. It is divided into several main topics namely the fundamentals of electronics instrumentation and measurement system, the working principles and application of sensors and transducers, principles and application of signal conditioning circuit including bridges, amplifier

and filters, and finally display, data acquisition and interfacing techniques.

Course Outcomes

- **CO1:** Ability to define, describe and analyze the elements of a complete electronic instrumentation and measurement system.
- CO2: Ability to design and apply the working principles of various sensors and signal conditioning/processing techniques in instrumentation and measurements.
- CO3: Ability to describe and analyze display systems, data acquisition systems and computer interfacing techniques in instrumentation and measurements.

PLT203/3 ELECTRONICS II

Course Synopsis

This course is the continuous of concepts of electronic circuit in the Electronic I. This course intends to give the students knowledge on Bipolar Junction Transistor (BJT) and Field Effect Transistor (FET), Power Amplifier, Operation Amplifier, Op-Amp Application, Feedback Circuit and Voltage Regulator.

Course Outcomes

- **CO1:** Ability to analyze small-signal and frequency performance of basic amplifier configurations (BJT and FET) and categorize different types of power amplifiers.
- **CO2:** Ability to design the basic circuit of amplifier.
- **CO3:** Ability to differentiate the feedback amplifier and analyze an oscillator.
- **CO4:** Ability to explain the operation and analyze various types of filters.

CO5: Ability to describe the operation and analyze the simple linear and non-linear voltage regulator circuits.

PLT204/3 ELECTROMAGNETIC FIELD THEORY

Course Synopsis

The purpose of this course is to learn the basic theory and analysis of electromagnetic field. Student should be able to understand the basic concept of vector, theory of electrostatics and magnetostatics. It also covers the theory and application of transmission line.

Course Outcomes

CO1: Ability to analyze the concept of vector analysis in electromagnetic theory.

- **CO2:** Ability to investigate and analyze the concept of electrostatic.
- **CO3:** Ability to investigate and analyze the concept of magneto static.
- **CO4:** Ability to relate and evaluate the concept of electromagnetic in transmission line analysis.

PLT205/4 ELECTRICAL MACHINES TECHNOLOGY I

Course Synopsis

Electrical Machines Technology I is intended to give the students deep knowledge about magnetic circuits, electromagnetic, electromechanical, transformer, and DC machine. This

course focuses on the following concepts: The practical and laboratory work are designed to give the students the practical perspective of electromagnetic, transformer and DC machine. Practical based on experiments are the main practical work for the students in this course. They are given the opportunity to fully utilize the current available facilities to realize the knowledge of practical electromagnetic, transformer, and DC machine.

Course Outcomes

- **CO1:** Ability to analyze the basic concept of electromagnetism into electrical machines
- **CO2:** Ability to analyze the performance of transformer
- **CO3:** Ability to evaluate the performance of DC motor
- **CO4:** Ability to analyze the performance of DC generator

PLT206/3 MICROCONTROLLER SYSTEM

Course Synopsis

The aims of this course is to study the PIC microcontroller architecture, its programming using C language and basic interfacing with input and output devices. These knowledge are gathered and applied to design a simple microcontroller based system.

Course Outcomes

- **CO1:** Ability to analyze and design a microcontroller programming language in C program.
- **CO2:** Ability to interface the input and output devices with microcontroller.
- **CO3:** Ability to develop a simple application on a microcontroller-based system.

PLT207/3 POWER ELECTRONICS

Course Synopsis

This course introduces Power Electronics concepts as a multidisciplinary and interdisciplinary applications oriented technology emphasizing the main criterion of electrical energy conversion. An AC-DC, AC-AC, DC-DC and DC-AC converter performances is analysed via its waveform. This course also introduces an awareness of Electromagnetic Compatibility (EMC) Leaislation and the effects of Power Electronic Systems on Power Ouality. Design aspects include understanding manufacturer's data, co-relating data to select power semiconductors and passive components, thermal management and EMC compliance.

Course Outcomes

- **CO1:** Ability to analyse operation and applications of power electronic devices and addressing the needs of EMC requirements.
- **CO2:** Ability to evaluate the performance of AC-DC and AC-AC converters.
- **CO3:** Ability to evaluate the performance of DC-DC and DC-AC converters.

PLT208/3 COMMUNICATIONS SYSTEM

Course Synopsis

This subject will cover all the basic principles and concepts of communication system including the basic elements of communications such as modulation techniques (amplitude modulation, angle modulations and digital modulations), transmission channels and medium. In addition, signal propagations and noise in communication system will be discussed.

Course Outcomes

- CO1: Ability to distinguish the basic requirement of communication systems and the essential of communication system.
- **CO2:** Ability to differentiate the different types of modulation.
- **CO3:** Ability to evaluate and analyze noise in communication system.

PLT209/3 SIGNAL & SYSTEMS

Course Synopsis

This course aims to introduce students the basic of signals and systems. To learn how to analyze the waveform of signals and its characteristic in engineering system. To understand signal spectrum concept, determine the process of the systems and evaluate systems response using various methods.

Course Outcomes

- **CO1:** Ability to analyze waveform of the signals and its characteristic in engineering sustems.
- **CO2:** Ability to analyze signals and determine the process of the systems.

CO3: Ability to evaluate the system response using variable methods.

PLT301/4 ELECTRICAL MACHINES TECHNOLOGY II

Course Synopsis

Electrical Machines Technology II is intended to give the students deep knowledge about the three phase system, single phase, three phase induction motor, synchronous machine, motor starter, testing and maintenance of electrical machines. This course focuses on the following concepts: The practical

and laboratory work are designed to give the students the practical perspective of the three phase system, three phase AC motor, open and fix motor, star-delta starter and testing the AC motor. Practical based on experiments are the main practical work for the students in this course. They are given the opportunity to fully utilize the current available facilities to realize the knowledge of practical three phase system and AC motor.

Course Outcomes

- CO1: Ability to define and explain the three phase system and its application to the electrical machines
- CO2: Ability to define and explain the single phase, synchronous and three phase motor and its application to the electrical machines.
- CO3: Ability to determine and analyze parameters for AC Machines and the used of the motor starter.
- CO4: Ability to apply related testing, maintenance and software tools in understanding the principle of electrical machines.

PLT302/3 ELECTRICAL INSTALLATION I

Course Synopsis

This course uses a combination of theory and practical 'hands on' project assignment to demonstrate and reinforce the principles. Students in this course are expected to work through the project assignments are based on actual installations and projects in low voltage system.

Course Outcomes

CO1: Ability to apply the IEE Regulations and IEC Standards.

CO2: Ability to define the general characteristics of an electrical installation.

CO4: Ability to design electrical lighting and power installations for specific application

PLT303/3 ELECTRICAL DRIVES

Course Synopsis

This course provides the student an exposure application of Power Electronics for electric motor drives. It emphasize on fundamental concepts of power electronic drives, electrical machines types and related applications. The aspects of load characteristic and matching drives to load also discussed.

Course Outcomes

- **CO1:** Ability to differentiate and explain type of motor loads and drive requirements.
- **CO2:** Ability to justify and analyze power electronic drives parameters based on load characteristics.
- **CO3:** Ability to explain and calculate converters parameters for power electronic drives.
- CO4: Ability to design and recommend appropriate power electronic drives parameters in electrical machines application.

PLT304/4 ELECTRICAL POWER SYSTEM

Course Synopsis

This course intends to give students fair knowledge of power system engineering which covers the topics of generation, transmission and distribution systems. The sub-topics that will be emphasized are such as the per-unit system, transmission line parameters and models, load characteristics, representations of components in power systems, fault and protection sustem.

Course Outcomes

- **CO1:** Ability to explain types and operation of power system generations in groups.
- **CO2:** Ability to solve single-line diagram problems using the per-unit system.
- CO3: Ability to calculate and analyze the transmission line parameters and models in power system.

CO5: Ability to explain and analyze fault and protection system in power system.

PLT305/3 CONTROL SYSTEM TECHNOLOGY

Course synopsis

This course is an introduction to control systems theory involving different areas of applications, comprises of three major parts: Part I - Control Systems Representations -representation of physical systems by differential equation, transfer function, state-space modeling, block diagram techniques and signal flow graph. Part II - Control

Systems Performance Analysis
- analysis of systems in terms of
transient response, stability and
steady-state errors. Root locus and
frequency response techniques are
used for higher order systems. Part
III – Control Systems Design - design
of controllers and compensators
for systems via root locus and
frequency response.

Course Outcomes

- **CO1:** Ability to obtain the mathematical model for electrical and mechanical sustems.
- CO2: Ability to analyze system's time-domain with response to test inputs. Analysis includes the determination of the system stability.
- CO3: Ability to analyze system's frequency-domain with response to test inputs. Analysis includes the determination of the system stability.
- **CO4:** Ability to design PID, lead and lag controllers based on the analysis of the system's response.

PLT340/4 FINAL YEAR PROJECT I

Course Synopsis

Small-scaled research project that inclined towards designing is necessary for each final-year student. The student will be given an engineering problem (or encourage to identify on their own) and gain expertise by problem solving, investigation, research writing and effective presentation of the research outcome in the form of thesis and seminar.

Course Outcomes

- **CO1:** Ability to apply and integrate theory and practical to solve the engineering problems.
- **CO2:** Ability to develop suitable research methodology for the project.
- **CO3:** Ability to explain a project in a technical report.
- **CO4:** Ability to present and defend effectively project proposal to selected audience.

CO5: Ability to identify commercialization potential for proposed project.

PLT 306/3 ELECTRICAL INSTALLATION DESIGN II

Course Synopsis

Maximum efficiency, reliability, and longevity of the various types of generators, exciters, voltage regulators, and uninterruptible power supply are of great concern to many industries. These objectives can only be achieved by understanding the characteristics. selection criteria, common problems and repair techniques, preventive and predictive maintenance. This course covers on diesel generator and uninterruptible power supply used in industrial and commercial facilities. The course also covers the bust duct system and lightning protection system.

Course Outcomes

- **CO1:** Describe the fundamental operations of a backup energy system.
- **CO2:** Describe how generators operate in parallel and design the synchronizing system for parallel generator.
- **CO3:** Apply and design the backup energy system.

- CO4: Explain and select the bust duct and performing all necessary calculations.
- **CO5:** Design the lightning protection system for commercial buildings and facilities.

PLT307/3 PROGRAMMABLE LOGIC CONTROLLER (PLC)

Course Synopsis

The student will be expose to programmable logic controller (PLC), PLC components, PLC programming and operational procedure. PLC is

capable to perform more complex motion and process control applications.

Course Outcomes

- **CO1:** Ability to explain ladder diagram that will perform a specified operation using PLC programming.
- **CO2:** Ability to design a specified operation using PLC programming in applications of industrial electronic control.

- James A. Rehg, Glenn J. Sartori, Programmable Logic Controllers, 2nd Ed., Prentice Hall. 2008.

PLT308/3 POWER QUALITY

Course Synopsis

This course will help students to understand the basics of the power quality. This course intends to give the students knowledge on power quality terms and definitions.

Course Outcomes

- **CO1:** Ability to apply the basic principles of measurement electrical power transmission.
- **CO2:** Ability to apply the concept of distribution system for current and voltage measurement.
- **CO3:** Ability to apply the concept of power quality.
- co4: Ability to use the basic principle of energy management on power system economics.

PLT309/3 SUBSTATION MAINTENANCE

Course Synopsis

This course introduces aspects of the fundamentals and considerations of substation maintenance, configuration, bus bar and safety requirement. This course describes the functions of various substation main equipments. substation auxiliary included protection design against internal and external fault. The students also learn how to measure soil resistivity and resistance grounding, substation grounding design, furthermore calculation of the ground grid substation. This course will cover the principle elements of task to maintenance of a substation. Latter in this course, they will learn and practice how to test and maintain substation

Course Outcomes

CO1: Ability to explain fundamentals and considerations of substation design.

- **CO2:** Ability to describe operation, maintenance, selection and functions of substation equipments part and ability to design simple bus bar.
- **CO3:** Ability to measure resistivity and grounding resistance and ability to design and analysis ground grid substation and safety requirement.
- **CO4:** Ability to identify and calculate parameters in protection system of substation equipments caused by internal and external faults.
- cos: Ability to calculate capacity and service substation areas, explain foundation and structure of substation and test some substation equipments.

- John MC Donald, Electrical Power Substations Engineering. 2nd Edition. CRC Press. 2007.
- Paul Gill, Electrical Power Equipment Maintenance and Testing, 2nd Ed., CRC Press, 2008.
- Hermann J. Koch, Gas Insulated Substations, 1st Ed., Wiley-IEEE Press, 2014.
- 4. Turen Gonen, Electrical Power Distribution Engineering, 3rd Ed., CRC Press, 2014.

Course Synopsis

Small-scaled research project that inclined towards designing is necessary for each final-year student. The student will be given an engineering problem (or encourage to identify on their own) and gain expertise by problem solving, investigation, research writing and effective presentation of the research outcome in the form of thesis and seminar. The research area is mainly on electrical engineering technology.

Course Outcomes

- **CO1:** Ability to apply and integrate theory and practical to solve the engineering problems.
- **CO2:** Ability to develop suitable research methodology for the project.
- **CO3:** Ability to explain a complete project in a technical report (dissertation).
- **CO4:** Ability to present and defend effectively project findings to selected audience.
- **CO5:** Ability to identify commercialization potential for developed project.

PLT401/3 POWER SYSTEM PROTECTION AND SWITCHGEAR

Course Synopsis

This course introduces varieties of Circuit Breakers, Isolator, Earthing Switch, Bus-bar and Relays for protection of Generators, Motor, Transformers from short circuit, over voltage and other hazards caused by internal and external faults. This course also describes various Neutral grounding of the equipment related to protection systems.

Course Outcomes

- **CO1:** Ability to explain and calculate restriking phenomenon, operation and selection of switchgear equipment.
- **CO2:** Ability to identify abnormal condition on equipment, application, choice of protective relay correctly.
- CO3: Ability to explain causes of overvoltage, Evaluate application of Arrester to equipment protection the related insulation coordination problems and necessity of earthing neutral.

PLT402/3 INDUSTRIAL AUTOMATION

Course Synopsis

This course will expose to the students about the properties and applications of concept of automation in industry, industrial automation tool, open and closed-loop process control systems and distinguish between their dynamics, principles of stability, disturbance rejection and robustness of control systems to process variations. The course also provides the student with basic skills useful in identifying the concepts of automated in machines and equipment and

describe the terms and phrases associated with industrial automation. This course cover topics related to control pressure, level, temperature, flow and automation in the process industry. These include a study on industrial sensors and actuators, industrial controllers such as computer-based control. The control strategies for specific process applications and the applications of PLC's to industrial processes and design PLC programs to solve sequential control problems are also provide in this course.

Course Outcomes

CO1: Ability to describe the properties and applications of concept of automation in industry, industrial automation tool, open- and closed-loop process control systems and distinguish between their dynamics, principles of stability, disturbance rejection and robustness of control systems to process variations.

CO2: Ability to describe, summarise and evaluate of hydraulic, pneumatic and electronic automation systems, the operation of the different controller modes and their practical limitations, determine their response to standard inputs and to process

disturbances in open- and closed-loop, the stability of given control systems.

CO3: Identify and outline the common control strategies for specific process applications, and the applications of PLC's to industrial processes and design PLC programs to solve sequential control problems.

PLT403/3 HIGH VOLTAGE TECHNOLOGY

Course Synopsis

This course focus on phenomena of high voltage surges and insulation coordination for power systems, characteristics of conduction and breakdown of gas, liquid and solid dielectrics, generation of high voltages and currents, measurement of high voltages and currents, `non-destructive testing (NDT) for high voltage components, detection and measurement of discharge process.

Course Outcomes

co1: Ability to explain the concept of high voltage engineering and calculate various breakdown parameters and identify applications of vacuum dielectrics, liquid dielectrics, solid dielectrics, and composite dielectrics.

co2: Ability to explain, calculate and analyze the concept of generations and measurements of high voltage AC, DC, Impulse voltage and impulse current generators.

CO3: Ability to explain the overvoltage phenomena and the related insulation coordination problems and analyze types of high voltage testing for electrical apparatus and nondestructive materials.

PLT404/3 RENEWABLE ENERGY

Course Synopsis

This course will introduce students with conversion, storage, integration and economic assessment techniques for renewable energy systems. This course also enables students to assess and design basic system configuration from major renewable energy technologies for both standalone and grid-connected power generation.

Course Outcomes

- **CO1:** Ability to explain the fundamental principles of major renewable energy technologies.
- **CO2:** Ability to analyze and solve problems on both technical and economic aspect of renewable energy systems.
- **CO3:** Ability to design and evaluate appropriate system configuration based on given application.

PLT405/3 ENERGY EFFICIENCY AND MANAGEMENT

Course Synopsis

This course exposes the students to the energy efficiency and energy management in order to reduce energy costs and promote economic and environmental sustainability. At the end of this course, students will be exposed to the techniques for energy

audit such as analyzing energy consumptions and design a solution for energy saving programs. In addition, safety aspect of electrical equipment will also be exposed to the student to create awareness and safe working practice.

Course Outcomes

- **CO1:** Ability to apply the basic principles of measurement electrical power transmission.
- **CO2:** Ability to apply the concept of distribution system for current and voltage measurement.
- **CO3:** Ability to apply the concept of power quality.
- **CO4:** Ability to use the basic principle of energy management on power system economics.

Faculty of Engineering Technology Department of Electrical Engineering

Bachelor of Electrical Engineering Technology (Hons) (Robotics & Automation Technology)

Programme Educational Objective

PEO1

Graduates who effectively demonstrate engineering knowledge and entrepreneurial skills by providing practical solutions.

PEO 2

Graduates who effectively demonstrate professionalism in multi-disciplinary engineering technology environment, leadership quality and teamwork.

PEO 3

Graduates who engage in life-long learning and demonstrate an ethical commitment to the community and the profession through involvement with professional organizations and societu.

Programme Outcomes (PO)

PO1

Apply knowledge of mathematics, science, engineering fundamentals and engineering specialisation principles to defined and applied engineering procedures, processes, systems or methodologies;

PO2

Solve broadly-defined engineering problems systematically to reach substantiated conclusions, using tools and techniques appropriate to their discipline or area of specialisation

PO3

Design solutions for broadly-defined engineering technology problems, and to design systems, components or processes to meet specified needs with appropriate consideration for public health and safety, as well as cultural, societal, environmental and sustainability concerns

PO₄

Plan and conduct experimental investigations of broadly-defined problems, using data from relevant sources

PO₅

Select and apply appropriate techniques, resources and modern engineering tools, with an understanding of their limitations

P₀₆

Function effectively as individuals, and as members or leaders in diverse technical teams

PO7

Communicate effectively with the engineering community and society at large

PO8

Demonstrate an awareness of and consideration for societal, health, safety, legal and cultural issues and their consequent responsibilities

PO9

Demonstrate an understanding of professional ethics, responsibilities and norms of engineering technology practices

PO10

Demonstrate an awareness of management, business practices and entrepreneurship

PO11

Demonstrate an understanding of the impact of engineering practices, taking into account the need for sustainable development

PO12

Recognise the need for professional development and to engage in independent and lifelong learning

Curriculum Structure for Bachelor of Electrical Engineering Technology (Hons) (Robotics & Automation Technology)

| YEAR | FIR | ST | SEC | COND | THIRD | FOURTH | | |
|--------------------------|---|---|---|---|---|--|---|----------------------------------|

Elective I Elective II

A1: PLT 329/3 Advanced Control System B1: PLT 423/3 Material Handling and Identification A2: PLT 328/3 Robotic Control B2: PLT 424/3 Automated Guided Vehicle

PLT102/2 COMPUTER AIDED DRAFTING (CAD)

Course Synopsis

This is a core subject. It will expose the students to understand the concepts of Computer Aided Drafting. Student also would able to illustrate engineering drawing, 2D & 3D modelling and construct a product drawing.

Course Outcomes

- **CO1:** Ability to apply fundamental concepts of Computer Aided Drafting.
- **CO2:** Ability to illustrate engineering drawing by using proper techniques.
- **CO3:** Ability to use of Computer Aided Drafting to construct a simple product drawing.
- **CO4:** Ability to perform in groups to illustrate 2D and 3D modeling.

PLT104/3 ENGINEERING SCIENCE

Course Synopsis

This course aims to introduce to the Electrical Engineering students the knowledge on the principles of material engineering and thermal fluid. It includes aspects related to material engineering, thermodynamics and fluid mechanics.

Course Outcomes

- CO1: Ability to describe and analyze the Mechanical, Electrical and Magnetic properties of materials.
- co2: Ability to understand, apply and analyze concepts and principles of Fluid Statics, Bernoulli and Energy Equations.
- co3: Ability to understand, apply and analyze concepts and principles of First Law and Second Law of Thermodynamics.
- **CO4:** Ability to work in team and communicate effectively.

PLT105/3 ELECTRIC CIRCUIT THEORY 1

Course Synopsis

This course covers topics of introduction to the DC circuit's covers fundamental laws and theorems. Students also get knowledge about AC circuits that introduces phasors and sinusoidal steady state analysis. This course intends to give the students knowledge on understanding three-phase balance systems.

Course Outcomes

CO1: Ability to derive importantequations to solve problems in DC circuits.

co3: Ability to calculate circuit parameters containing sinusoidal steady-state sources using complex impedances and phasor representations.

PLT106/3 DIGITAL ELECTRONICS

Course Synopsis

Basically this introductory circuit course can be divided into two parts. Part I, consisting of chapter 1 through 4, is devoted to DC circuits. It covers fundamental laws and theorems, circuit analytical techniques, passive and active elements. Part 2, consisting of chapter 5 through 7, deals with

AC circuits. It introduces phasors, sinusoidal steady state analysis, using previous analytical techniques under sinusoidal steady state excitation, RLC circuits, AC power calculations and power factor correction and rms values.

The aim of this course is to introduce students to the basic knowledge in the digital electronics. The lectures and laboratories cover the following topics: Numbering System, Algebraic Switching, Boolean Function, Combinational Logic and Sequential Logic Circuit.

Course Outcomes

- CO1: Ability to explain and use the basic principles of numbering system and basic theory of binary system in digital electronics
- **CO2:** Ability to design and optimizes logic circuit using Boolean functions and Karnaugh maps
- **CO3:** Ability to design digital system applications using combinational and sequential logic design techniques.

PLT107/3 ELECTRONICS 1

Course Synopsis

This subject will expose the students with basic electronic devices. It provides a depth study on the concept of PN junction, operation and characteristics of the diode. The students will be emphasized to Half wave rectifiers. Full wave rectifiers, Power Supply Filter and Regulators, Clipper and Clamper Diode circuits and Voltage Multipliers. The students also will learn about the special-purpose of zener diode in terms of its characteristics and applications. Bipolar Junction Transistors (BJTs) and various types of Field-Effect Transistor which are Junction Field-Effect Transistor (JFET) and the Metal Oxide Semiconductor Field-Effect Transistor (MOSFET)

will be introduced in this course as well. Basic theories, principles and practical are stressed in this course.

Course Outcomes

- **CO1:** Ability to explain and differentiate the fundamental concepts of electronic devices.
- **CO2:** Ability to analyze the basic operations of electronic devices such as diode, BJT and various types of FET.
- **CO3:** Ability to calculate and analyze the basic biasing circuits using datasheet.

PLT108/3 ENGINEERING SKILLS II

Course Synopsis

This is the core subject which is 100% practical and carried out 3 units credit hours. This course contains modules to provide students with engineering skills such as Printed Circuit Board (PCB) fabrication and design module and electrical domestic wiring.

Course Outcomes

- **CO1:** Ability to use OrCAD software to construct PCB circuit board.
- **CO2:** Ability to apply and construct the basic skills and standard practiced of PCB layout design and fabrication process.
- **CO3:** Ability to apply and construct the basic skills and standard practiced of domestic wiring.

 Pethebridge, K. and Nesson, I. (2002). Electrical Wiring Practice. 6th Edition, Mc-GrawHill.

PLT121/3 ELECTRICAL TECHNOLOGY

Course Synopsis

The objective of the course is to introduce the students with the fundamentals concept of electric circuits, electric supply system and installation, magnetic and electromagnetic, inductance, capacitance and AC circuit, three-phase system, basic principles of electrical machines, DC and AC electrical machines, transformer and electrical safety. The laboratory will be used to aid the students understanding of the concept introduced.

Course Outcomes

- **CO1:** Ability to analyze electrical circuits to solve engineering problems.
- **CO2:** Ability to analyze the characteristics three-phase circuits and electromagnetic.
- **CO3:** Ability to analyze the operation of Electrical Machines and their applications.

PLT202/3 MEASUREMENT & INSTRUMENTATION

Course Synopsis

This course covers topics of introduction to the basic concepts of measurement methods and instrumentation. This course intends to give the students knowledge on measuring devices, bridge methods and transducers.

Course Outcomes

CO1: Ability to define, describe and analyze the elements of a complete electronic instrumentation and measurement system.

- co2: Ability to explain and apply the working principles of various sensors and signal conditioning/processing techniques in instrumentation and measurements.
- CO3: Ability to describe and analyze display systems, data acquisition systems and computer interfacing techniques in instrumentation and measurements.

PLT206/3 MICROPROCESSOR SYSTEM & MICROCONTROLLER

Course Synopsis

The aims of this course is to study the PIC 18 microcontroller architecture, its programming language (assembly and C) and basic interfacing with input and output devices. These knowledge are gathered and applied to design a simple microcontroller based system.

Course Outcomes

- **CO1:** Ability to explain the basic microcontroller architecture.
- **CO2:** Ability to analyze and write a microcontroller programming language in assembly and C program.
- **CO3:** Ability to interface the input and output devices with microcontroller.
- **CO4:** Ability to design a simple microcontroller based system and present in group.

PLT209/3 SIGNAL & SYSTEMS

Course Synopsis

This course aims to introduce students the basic of signals and systems. To learn how certain input to a system will produce the required output. To understand signal spectrum concept and the method being utilized to analyze signal and its relations.

Course Outcomes

- **CO1:** Ability to identify type and analyze waveform of the signals and its characteristic in engineering systems.
- **CO2:** Ability to analyze signals and determine the process of the systems.

- **CO3:** Ability to explain and calculate the system response using variable methods.
- **CO4:** Ability to prepare a report in relevant topics using various resources.

PLT221/3 PRINCIPLES OF THERMO FLUID AND MATERIALS

Course Synopsis

This course aims to introduce to the mechatronic engineering students the basic knowledge on the principles of mechanical sciences. It includes basic aspects related to material engineering, fluid mechanics and Thermodynamics.

Course Outcomes

- CO1: Ability to describe the Mechanical properties of materials and analyse tensile, compressive, shear stresses & strains, and torsional deformation.
- CO2: Ability to calculate the pressure variation in a static fluid, and to analyze the resulting hydrostatic forces on plane and curved submerged surfaces.
- **CO3:** Ability to describe, explain and analyze an Energy equation for fluid flow problems.
- **CO4:** Ability to identify, analyze and solve energy balance problems for closed and steady flow systems and devices.

PLT222/3 APPLIED MECHANICS

Course Synopsis

This course covers vector representation of forces, moments and couples of static equilibrium of particles, rigid body and engineering structures, together with analysis of external and internal forces in structure via the methods of free body diagram and properties of cross-sectional areas. The course also elaborates on kinematics and kinetics of system of particles and a rigid bodies in two and threedimensional spaces covering force and acceleration, linear and angular momentum and energy conservation.

Course Outcomes

- **CO1:** Ability to apply the basic principles of statics and dynamics on mechanism and bodies.
- **CO2:** Ability to analyse systems/ problems related to forces, loads, displacement for bodies at rest.
- CO3: Ability to analyse systems/ problems related to forces, loads, displacement for bodies in motion

PLT 223/3 MACHINE DESIGN

Course Synopsis

This course enables the students to comprehend and identify theoretical design as well as the machine elements that need to be considered in machine design process. This course also encourages the students to think as a machine designer. The concept and principle of machine design taught will be applied in designing machine, focusing on the outcome of innovative student thinking.

Course Outcomes

- **CO1:** Ability to discuss, applies, and organizes the concept and principle of design process.
- **CO2:** Ability to discuss, apply, and organize machine elements and analyze position, velocity and acceleration of a point in a linkage.
- **CO3:** Ability to analyze, and construct machine elements to develop a mechanism.
- **CO4:** Ability to apply, analyze and sketch mechanism design (linkage synthesis).

Course synopsis

This course discusses basic pneumatics, sensors, electro-pneumatics and hydraulics technologies that are related to industrial application. Students will study the construction and design of circuit by eans of example and exercises.

Course Outcomes

- **CO1:** Ability to differentiate and explain type of hydraulics and pneumatics motor, drive and sensors and drive requirements.
- **CO2:** Ability to justify and analyze power of hydraulics and pneumatics drives parameters based on load characteristics.
- CO3: Ability to explain and calculate converters parameters for hydraulics and pneumatics drives.

PLT303/3 ELECTRICAL DRIVES

Course synopsis

This course provides the student an exposure application of Power Electronics for electric motor drives. It emphasize on fundamental concepts of power electronic drives, electrical machines types and related applications. The aspects of load characteristic and matching drives to load also discussed.

Course Outcomes

- **CO1:** Ability to differentiate and explain type of motor loads and drive requirements.
- CO2: Ability to justify and analyze power electronic drives parameters based on load characteristics.
- **CO3:** Ability to explain and calculate converters parameters for power electronic drives.
- **CO4:** Ability to design and recommend appropriate power electronic drives parameters in electrical machines application.

PLT305/3 CONTROL SYSTEM TECHNOLOGY

Course Synopsis

This course is an introduction to control systems theory involving different areas of applications, comprises of three major parts: Part I - Control Systems Representations -representation of physical systems by differential equation, transfer function, state-space modeling, block diagram techniques and signal flow graph. Part II - Control Systems Performance Analysis - analysis of systems in terms of transient response, stability and

steady-state errors. Root locus and frequency response techniques are used for higher order systems. Part III – Control Systems Design - design of controllers and compensators for systems via root locus and frequency response.

Course Outcomes

- **CO1:** Ability to obtain the mathematical model for electrical and mechanical sustems.
- CO2: Ability to analyze system's time-domain with response to test inputs. Analysis includes the determination of the system stability.
- CO3: Ability to analyze system's frequency-domain with response to test inputs. Analysis includes the determination of the system stability.
- **CO4:** Ability to design PID, lead and lag controllers based on the analysis of the system's response.

PLT307/3 PROGRAMMABLE LOGIC CONTROLLER (PLC)

Course Synopsis

The student will be expose to programmable logic controller (PLC), PLC components, PLC programming and operational procedure. PLC capable to perform more complex motion and process control applications.

Course Outcomes

- CO1: Ability to explain ladder diagram that will perform a specified operation using PLC programming.
- **CO2:** Ability to design a specified operation using PLC programming in applications of industrial electronic control.

References

- Jacob, M. (2009). Industrial Control Electronics. 3rd Ed. Prentice Hall.

PLT321/3 INDUSTRIAL NETWORKING

Course Synopsis

This subject will cover all the basic principles and concepts of communication system including the basic elements of communications, signal analysis, amplitude modulation, angle modulations and digital modulations, as well as transmission channels and medium. In addition, introductions to signal propagations and calculations of signal to noise ratio are also introduced to relate the students with real world applications.

Course Outcomes

- **CO1:** Ability to explain the principle of network and communication systems.
- **CO2:** Ability to obtain mathematical model of modulation.
- **CO3:** Ability to apply principle of various types of network and communication systems.
- **CO4:** Ability to select equipments for the industrial network and communication technology.

PLT322/3 INDUSTRIAL PROCESS CONTROL

(Pre Requisite: PLT 305/3 Control System Technology)

Course Synopsis

This course aims to convey the knowledge of classical control systems, advanced classical control method, state space representation of continuous-time system, continuous-time response and performance, specifications, state space analysis and design, advanced state space control system, projects based on problems drawn from mechatronics and manufacturing.

Course Outcomes

- **CO1:** Ability to analyze the concepts of state-space design, nonlinear system and digital control.
- CO2: Ability to apply the concept of controllability and observability
- **CO3:** Ability to analyze the non linear system.
- **CO4:** Ability to design the digital control.

PLT323/3 INTRODUCTION TO ROBOTICS

Course Synopsis

This course is designed to introduce various aspects of Robotics such as the Types of robots, Capabilities, Characteristics, Robot Control Systems and Software, Kinematic Analysis, Principles of Inverse Kinematics, Robot Sensors and Drive mechanisms, Robot Work Dell design and Various industrial Applications.

Course Outcomes

- CO1: Ability to describe the importance of various types of robots and relate them in various industrial applications.
- **CO2:** Ability to construct and analyze the coordinate representation, transformations and path planning.
- **CO3:** Ability to construct and analyze robot control systems for various industrial applications.
- **CO4:** Ability to design a robot work-cell for specific industrial task and measure its validity.

PLT324/3 MANUFACTURING PROCESS

Course Synopsis

This course is an introduction of manufacturing processes and techniques used in industry to convert raw materials into finished or semi-finished part. This includes the study on the characteristics of manufacturing processes such as forming, casting, moulding, rapid prototyping, non-conventional machining and welding, soldering and mechanical fasteners. The influence of materials and processing parameters in understanding individual processes are also highlighted

Course Outcome

CO1: Ability to describe and choose the right raw materials for selected manufacturing processes.

- CO2: Ability to describe, display and analyze the manufacturing processes for a finished product.
- **CO3:** Ability to choose, compare and evaluate the use of proper machine to complete a particular manufacturing process.

PLT325/3 MANUFACTURING SUPPORT SYSTEM

Course Synopsis

This course offers comprehensive contents about production and operation management in

manufacturing and services. Production and operation management is the process of managing people and resources in order to create a product or a service. This course also introduces students to project management. forecasting theory, goods and services design, process strategy and capacity planning, location and layout strategies, supply chain management, inventory management theory, aggregate planning theory, Material Requirements Planning (MRP) and scheduling theory.

Course Outcome

- **CO1:** Ability to analyze operations management in operations, productivity, project management and forecasting.
- **CO2:** Ability to design operations in goods and services, process control, capacity planning, location and layout strategies.
- CO3: Ability to manage operations in supply-chain management, inventory management, aggregate planning, material requirements planning, operations scheduling, maintenance and reliability.

PLT326/3 INDUSTRIAL AUTOMATION

Course Synopsis

This course aims to convey the knowledge of automation technologies. It combines the automation technology principles and its relationship with assembly process and system, the element of sensor, actuator and drive technology as an input/output component in automation technology. It also covers automation technology and

technique in terms of hardware and software control, the automation technology issues in design, engineering analysis, planning, tooling and manufacturing.

Course Outcomes

- **CO1:** Ability to perform analyzes on automation in a production system.
- **CO2:** Ability to perform analyzes and evaluate on elements of an automation system.
- **CO3:** Ability to design and evaluate the automation system for an optimum performance in various applications.

PLT327/3 INDUSTRIAL ROBOTICS

Course Synopsis

This Course is designed to introduce various aspects of Robotics such as the types of robots, capabilities, characteristics, Robot Control Systems and Software, Kinematic Analysis, Principles of Inverse Kinematics, Robot Sensors and Drive mechanisms, Robot Work Dell design and Various industrial Applications.

Course Outcomes

- **CO1:** Ability to describe the importance of various types of robots and relate them in various industrial applications.
- CO2: Ability to construct and analyze the coordinate representation, transformations and path planning.
- **CO3:** Ability to construct and analyze robot control systems for various industrial applications.
- **CO4:** Ability to design a robot work-cell for specific industrial task and measure its validity.

PLT 328/3 ROBOTIC CONTROL (ELECTIVE A1)

Course Synopsis

The objective of this course is to impart knowledge in the application and design aspect of mechatronic system. The course topics include the applications of sensors and transducers, signal conditioning, pneumatic, hydraulic, mechanical and electrical actuators, input and output interfacing, communication systems, programmable logic controllers, microprocessors and fault analysis.

Course Outcomes

- **CO1:** Ability to design, develop and construct industrial measurement and instrumentation systems.
- **CO2:** Ability to design and develop industrial actuation systems.
- **CO3:** Ability to evaluate, design and construct analog and digital control system using PLC and Microcontroller.

CO4: Ability to design, construct and evaluate simple mechatronic systems that combine electrical/electronic and mechanical components.

PLT 329/3 ADVANCED CONTROL SYSTEM (ELECTIVE A2)

Course Synopsis

The aim of this course is to introduce state-space design, non-linear system and digital control. Students also will be exposed to

other control methods, like robust control, predictive control and optimal control.

Course Outcomes

- CO1: Ability to analyze the concepts of state-space design, non-linear system and digital control
- **CO2:** Ability to derive state-space description from continuous-time and discrete-time sustems.
- **CO3:** Ability to design sate-feedback and digital controller.
- CO4: Ability to evaluate Robust Control, Optimal Control methods.

- J R Leigh, "Control Theory", 4th ed. IEE, 2009
- Charles L. Philips, H. Troy Nagle, "Digital Control Systems Analysis and Design", 3rd ed. Prentice Hall, 1995

- M. Gopal, "Digital Control and State Variable Methods", McGraw-Hill, 1997.
- Kevin Warwick," An Introduction to Control Systems", 2nd ed. World Scientific, 1996

Course Synopsis

Small-scaled research project that inclined towards designing is necessary for each final-year student. The student will be given an engineering problem (or encourage to identify on their own) and gain expertise by problem solving, investigation, research writing and effective presentation of the research outcome in the form of thesis and seminar

Course Outcomes

- **CO1:** Ability to apply and integrate theory and practical to solve the engineering problems.
- **CO2:** Ability to develop suitable research methodology for the project.
- **CO3:** Ability to explain a project in a technical report.
- **CO4:** Ability to present and defend effectively project proposal to selected audience.
- **CO5:** Ability to identify commercialization potential for proposed project.

PLT421/3 INDUSTRIAL MANAGEMENT AND OUALITY

Course Synopsis

This course introduces productivity management such as competitiveness, ratios, work study, learning rates, and linear programming. It also introduces definitions of quality, its dimensions and views, concepts and techniques of total quality control such as statistical process control, process capability, acceptance sampling, and the relationships between productivity and quality. Where applicable, appropriate operations management software will be introduced.

Course Outcomes

- CO1: To understand the productivity concepts from different aspects of management
- **CO2:** To understand the Six Sigma management tools.
- CO3: To be able to understand the statistical methods used in quality control and improvement
- CO4: To understand the methods on how labour can improve their productivity and the measurements used to measure the labour productivity.

PLT422/3 MECHATRONIC SYSTEMS

Course Synopsis

This course introduces important concepts of Artificial Intelligence (AI) and their applications in mechatronic systems. The concepts include fuzzy logic, neural network, neuro-fuzzy, genetic algorithm and pattern recognition. The mechatronic systems encompass Industrial Automation, Industrial Robotics and Control of process systems.

- **CO1:** Ability to organize Artificial Intelligence components in mechatronics systems.
- **CO2:** Ability to display the concepts of pattern recognition and classification.
- **CO3:** Ability to analyze intelligent control with optimal parameter search for complex industrial systems.
- **CO4:** Ability to analyze simple expert system for specific requirements.

PLT 423/3 MATERIAL HANDLING AND IDENTIFICATION (ELECTIVE B1)

Course Synopsis

This course introduces important concepts of material handling and identification and their applications in automation systems. The concepts include Introduction to Material Transport Sytem, Conveyor system, Storage System, Automated Storage System, Automated Identification and Data Technology, Industrial Machine and Vision System.

Course Outcomes

- CO1: Ability to explain and analyze the material handling system and its relationship with assembly process
- **CO2:** Ability to explain and analyze the automated storage system
- **CO3:** Ability to explain and analyze the automated identification and data capture technology systems.
- **CO4:** Ability to explain and analyze application of industrial machine vision system.

PLT 424/3 AUTOMATED GUIDED VEHICLE (ELECTIVE B2)

Course Synopsis

This course introduces the students the concepts and design of wheeled and walking robot mechanisms with a study on their kinematics and dynamics aspects. The course also introduces the principles and applications of Autonomous Guided Vehicles (AGV).

Course Outcomes

- **CO1:** Ability to apply various locomotion systems in mobile robotic applications.
- **CO2:** Ability to analyze the forcetorque requirements of the mobile robots and select the most suitable actuator.
- **CO3:** Ability to solve the kinematics problems for mobile robots.
- **CO4:** Ability to apply suitable sensors and control systems for the wheeled mobile robot mechanisms.

CO5: Ability to analyze various autonomous guidance systems in mobile robotics application.

PLT440/6 FINAL YEAR PROJECT II

Course Synopsis

Small-scaled research project that inclined towards designing is necessary for each final-year student. The student will be given an engineering problem (or encourage to identify on their own) and gain expertise by problem solving, investigation, research writing and effective presentation of the research outcome in the form of thesis and seminar. The research area is mainly on electrical engineering technology.

Course Outcomes

- **CO1:** Ability to apply and integrate theory and practical to solve the engineering problems.
- **CO2:** Ability to develop suitable research methodology for the project.
- **CO3:** Ability to explain a complete project in a technical report (dissertation).
- **CO4:** Ability to present and defend effectively project findings to selected audience.
- **CO5:** Ability to identify commercialization potential for developed project.

Bachelor of Electronic Engineering Technology (Hons) (Electronic System)

Programme Objectives (PEO)

PEO 01

Electronic System Technologist who are competent in both technology theory and practice.

PEO 02

Electronic System Technologist who are able to demonstrate leadership and contribute to team success and manage projects in a multidisciplinary environment.

PEO 03

Electronic System Technologist who are able to make contributions to knowledge.

PEO 04

Electronic System Technologist who are able to demonstrate an ethical commitment to the community.

Programme Outcomes (PO)

PO 01

Apply knowledge of mathematics, science, engineering fundamentals and engineering specialization principles to defined and applied engineering procedures, processes, systems or methodologies;

PO 02

Solve broadly-defined engineering problems systematically to reach substantiated conclusions, using tools and techniques appropriate to their discipline or area of specialization;

PO 03

Design solutions for broadly-defined engineering technology problems, and to design systems, components or processes to meet specified needs with appropriate consideration for public health and safety, as well as cultural, societal, environmental and sustainability concerns;

PO 04

Plan and conduct experimental investigations of broadly-defined problems, using data from relevant sources;

PO 05

Select and apply appropriate techniques, resources and modern engineering tools, with an understanding of their limitations;

PO 06

Function effectively as individuals, and as members or leaders in diverse technical teams:

PO 07

Communicate effectively with the engineering community and society at large;

PO 08

Demonstrate an awareness of and consideration for societal, health, safety, legal and cultural issues and their consequent responsibilities;

PO 09

Demonstrate an understanding of professional ethics, responsibilities and norms of engineering technology practices;

PO 10

Demonstrate an understanding of the impact of engineering practices, taking into account the need for sustainable development;

PO 11

Demonstrate an awareness of management, business practices and entrepreneurship and Engineering Management;

PO 12

Recognize the need for professional development and to engage in independent and lifelong learning.

Course Syllabus

Discipline Core

PGT 101/3 ELECTRIC CIRCUIT PRINCIPLES

Course Synopsis

This course covers introduction to the basic of electrical measurements, Ohm's Law, Series and Parallel Circuits, Circuit Theorems and Conversions and RLC circuits. This course will expose the students to the elements and principles of electrical circuit theory with appropriate to any RLC circuit applications. The laboratory sessions will complement the theories given in a class.

- 4. Thomas L.Floyd, Electric Circuit Fundamental 8 Edition

PGT 102/3 ENGINEERING SCIENCE

Course Synopsis

This course covers introduction to physic and science which are force and motion, circular motion, work, power and energy, electrostatic, magnetism and electric current and resistance. Fundamental physics is combined with problem solving and engineering skills through suitable experiments. This course will expose the students to the elements and principles of basic concepts of physics and its application.

PGT 103/3 COMPUTER TECHNOLOGY

Course Synopsis

This course prepares the student to be familiar with computer hardware and software available in the market. The hardware includes CPU, memories and I/O such as monitor, keyboard and mouse. Computer software contains various Operating Systems (OS) such as Android, GNU/Linux, Microsoft and Apple based OS. Introduction to Free Open Source Software (FOSS) concept and philosophy, various applications such as Office Suite (word processor and spread sheet) will be explained.

PGT 120/3 MATERIAL ENGINEERING

Course Synopsis

The course is tailored to give students a broad introduction to material properties and limitations. The subject will cover class of material properties, measurement of the properties, and fundamental knowledge to make material selection with better properties. The common micro-structural features of different material classes will be outlined in order to relate material with its process as well as performance.

PGT 105/3 ELECTRICAL ENGINEERING TECHNOLOGY

Course Synopsis

This course focuses on the fundamental of electrical engineering and power electronics which consists of two parts; electrical machinery and instrumentation. This course will provide the basic knowledge in power transmission, machinery, power processing devices and metering. The topics covered in this course are transformers, AC and DC machines, AC and DC meters, AC and DC bridges, AC and DC converters, and sensors & transducers.

PGT 104/3 DIGITAL ELECTRONICS

Course Synopsis

Introduction and discussion of fundamental of digital circuit design and analysis. The lecture and tutorial exercise covers the following topics: Boolean Algebra, Numbering System, Basic Logic Gates, Combinational Circuit Design, Timing Diagram, Bi-Stable Memory Device and Sequential Circuit Design.

- Thomas L. Floyd, "Digital Fundamentals:, 10th Ed., Pearson Prentice Hall, 2009.
- Floyd. TL, "Digital Fundamentals", 9th Ed., Prentice Hall. 2006.

 Principles and Applications",
 7th Ed., Prentice Hall, 2003.
- 4. Nigel, P.C. "A First Course in Digital Electronics", 1st Ed., Prentice Hall, 1999.

Course Synopsis

This course introduces basic programming using high-level language (C language). The main objective of this course is to prepare the students with the ability of problem solving with programming, to be able to do analysis with programming tools such as flowcharts and pseudo code and then to implement them by developing C programmes.

PGT 107/2 WRITING IN ENGINEERING TECHNOLOGY

Course Synopsis

To expose the students to the common requirements and expectations of writing as an engineering technologist; as well as to the format and techniques of writing various types of engineering technology documents.

References

- Leo Finkelstein Jr (2008). Pocket Book of Technical Writing for Engineers and Scientist, 3rd Ed. (New York: McGraw Hill International Edition

PGT 211/3 ELECTROMAGNETIC THEORY

Course Synopsis

This is the first course in Electromagnetic Field Theory at the undergraduate level. It provides basic concepts and understanding of fundamental laws of electrostatics and magnetostatics. Applications of these laws for different field configurations are also introduced. The course also introduces transmission line theory and the use of transmission lines as circuit elements. Calculation of transmission line parameters like VSWR, reflection coefficient and impedance matching using Smith's chart is also included in this course.

PGT 201/3 MICROPROCESSOR

Course Synopsis

The aim of this course is to study the Intel 8085 microprocessor architecture and relate that knowledge to the design of

microprocessor based systems. This includes the design technique for designing memory, input and output for the systems. The study of 8085 instruction set and various software development tools are also emphasized as the knowledge are needed in the design of the microprocessor-based systems.

PGT 202/3 ANALOG ELECTRONICS I

Course Synopsis

This course exposes the student the basic knowledge in analog electronic. The exposure encompasses amplifier design based on bipolar and field effect transistors, for single and multi stage, power amplifier, frequency response analysis of amplifiers. Emphasis is placed on basic design aspects and applications. The course has been designed to provide basic analog electronic skills covering theories and practices.

PGT 207/3 OBJECT-ORIENTED PROGRAMMING

Course Synopsis

This course discuss objectoriented problem solving in Java, with attention to general as well as language-specific issues including applications, event-driven programming; elements of graphical user interfaces (GUIs); inheritance and polymorphism; exception handling; packages; applets; swing.

PGT 213/3 ANALOG ELECTRONICS II

Course Synopsis

This course offers the students an exposure to the Operational Amplifier: Operation, differential amplifier, common-mode, parameters, basic op-amp, practical op-amp circuits, opamp datasheet; Applications of op-amp and frequency response: Summing amplifier, Voltage follower, Comparator, Integrator, Differentiator, frequency response and compensation; Feedback Circuits: Concepts of feedback, types of feedback connection, practical feedback circuit, feedback amplifier; oscillator: Basic operating principles of an oscillator, phase shift, Wien Bridge, Crystal oscillator, uni-junction.

Active Analog Filters: Basic filter, filter response characteristics, low-pass filter, high-pass filter, band-pass filter, band-stop filter, frequency response measurement, design of filter, Butterworth, Chebychev and Elliptic

PGT 206/3 COMPUTER ARCHITECTURE

Course Synopsis

This course covers both the architectural and organizational aspects of computer sustems. Architectural aspects of a system are defined as the features that are available to the operating system kernel such as the instruction set, data representations and peripheral interfaces. On the other hand, organizational aspects of a system are defined as the physical implementations that realize the features given for a system. These include the design of basic building blocks such as the ALU and the control unit, as well as the logic level interface of both internal and external units. This course expects the students to have a good fundamental on digital logic design (both combinatorial and sequential logic).

Course Synopsis

The course provides the students an exposure on basic logic circuits design, layout design, layout simulation of integrated circuits, as well as basic integrated circuits design techniques.

PGT 205/3 SIGNALS AND SYSTEMS

Course Synopsis

This course introduce student to mathematical foundation and computational tools for processing continuous-time and discrete-time signals in both time and frequency domains. Key concepts and tools introduced and discussed in this class include linear time-invariant sustems, impulse response. frequency response, convolution, filtering, sampling, and Fourier transform. Laplace Transform and z-Transform. This course serves as entry and prerequisite for any higher level course in the fields of signal processing, communications, and control.

PGT 301/3 COMMUNICATION SYSTEMS

Course Synopsis

This course will cover all the basic principles and concepts of communication system including the basic elements of communications, signal analysis, amplitude modulation, angle modulations and digital modulations, as well as transmission channels and medium. In addition, introductions to signal propagations and calculations of signal to

noise ratio are also introduced to relate the students with real world applications.

PGT 320/3 POWER ELECTRONICS

Course Synopsis

Topics covered are:
Fundamental Concepts of Power
Electronics, Power Semiconductor
Devices, Power Electronic Circuits,
AC-DC Conversion, AC-AC
Conversion, DC-DC Conversion and
DC-AC Conversion.

- Muhammad H. Rashid. (2004). Power Electronics: Circuits, Devices & Applications. 3rd ed. Pearson: Prentice-Hall.

PGT 330/3 MICROELECTRONIC FABRICATION TECHNOLOGY

Course Synopsis

This course on advance fabrication technology focuses on the concept and the basics of semiconductor materials, process technology and the fabrication processes of Integrated Circuits (ICs). The students will also be exposed to thefabrication process from oxidation, photolithography, etching, e-beam lithography, diffusion, implantation, metallization and characterization.

PGT 332/3 SEMICONDUCTOR PACKAGING

Course Synopsis

Students will be exposed to Microsystems packaging, the role of packaging in microelectronics, fundamental of IC assembly. general semiconductor process flow, advance material for nanopackaging design for reliability, thermal management, sealing and encapsulation, packaging material and processes, and latest packaging technology trend via latest scientific papers. The students will also be exposed to identifying critical packaging parameters and interpreting data of their own designed experiment. Mathematical modelings in packaging are also introduced.

- 1. Advanced Electronic Packaging, Richard K. Ulrich & William D. Brown, John Wiley & Sons Inc.

- Fundamentals of Microsystems Packaging, Rao R. Tumala, McGraw-Hill.

PGT 333/3 RELIABILITY & FAILURE ANALYSIS

Course Synopsis

This course is basically divided into two areas: Reliability & Failure Analysis. In the first section of reliability, students will learn the concept of reliability, its terms & definitions, the different tupes of reliability distributions and also the different types of reliability prediction techniques such as FMEA & FTA. In the second section of failure analysis, students will be exposed to the different types of FA techniques commonly conducted on a failed semiconductor device and the test instrumentation associated with each technique.

PGT 334/3 NANOSYSTEM DESIGN

Course Synopsis

Nanosystem design is an advanced nanosystem course and divided into three parts which are nanosystems design, parallel architecture and complex integrated nanosystems and nanoelectronics and nanowire. Nanosystem design part will cover the topics on basis of nanomaterials, nanoelectronic and nanoarchitectures and application of nanodevices in integrated system. In parallel architecture and complex integrated nanosystems the topics that covered are architecture principles and nanosystems as information-processing machines.

Otherwise, in nanoelectronics and nanowire the topics that covered are nanoelectronics with tunneling devices, nanoelectronics with superconducting devices and basic of nanowire development and characterization.

PGT 420/3 INSTRUMENTATION

Course Synopsis

This course covers the fundamental of electronic instrumentation. This includes the working principle and transduction properties of sensors and transducers. Importance and techniques of signal conditioning is emphasized. Element and principle

of data acquisition and their applications are discussed. Modern stand-alone and computer-based measurement instruments are covered.

PGT 430/3 MICRO-ELECTRO-MECHANICAL SYSTEM

Course Synopsis

This course will focus on design and simulation of N/MEMSdevices. The design will include several of analysis types suchas structural, electrical and mechanical while the fabricationtechnology will focus on bulk and surface micromachining. Thiscourse will also discuss the application and technology of N/MEMS packaging in various fields.

PGT 310/3 DIGITAL SIGNAL PROCESSING

Course Synopsis

Digital Signal Processing (DSP) has continued to have a major and increasing impact in manu key areas of technology including telecommunication, digital television and media, biomedicine, VLSI design etc. DSP is now at the core of manu new and emerging digital products and applications in the information society and is a core subject in most electronic/computer/ communication engineering curricula. This course is designed to give the students the necessary mathematical tools to analyze discrete time signals and systems. The course also includes various techniques for the design of digital filters and their implementations using DSP processors.

PGT 431/3 OPTOELECTRONIC SYSTEM

Course Synopsis

The students studying this course will develop a basic understanding of the principles and practices of modern optoelectronic device includes fiber optic, semiconductor laser, photodiode and LED. The important functions for applications for these optoelectronic devices will acquire in optoelectronic system such as optical communication and display technology. Practical skills by using software in optical fiber systems and measurement will also be acquired.

PGT 300/4 FINAL YEAR PROJECT I

PGT 400/4 FINAL YEAR PROJECT II

Course Synopsis

This is a research project in connection with engineering technology problem and under the guidance of a faculty member. The project undertaken may fall under one of the following areas: mathematical analysis, experimental tests, computer simulation, hardware and/or software development, device fabrication. For both FYP I and II, each student prepares a comprehensive engineering report, present and demonstrate findings and results of the project work.

Bachelor of Electronic Engineering Technology (Honours) (Electronic Telecommunication Design)

Programme Objectives (PEO)

PEO 01

Telecommunication Technology graduates who are competent in both technology theory and practice.

PEO 02

Telecommunication Technology graduates who are able to demonstrate leadership and contribute to team success and manage projects in a multidisciplinary environment.

PEO 03

Telecommunication Technology graduates who are able to make contributions to knowledge.

PEO 04

Telecommunication Technology graduates who are able to demonstrate an ethical commitment to the community.

Programme Outcomes (PO)

PO 01

Apply knowledge of mathematics, science, engineering fundamentals and engineering specialization principles to defined and applied engineering procedures, processes, systems or methodologies;

PO 02

Solve broadly-defined engineering problems systematically to reach substantiated conclusions, using tools and techniques appropriate to their discipline or area of specialization;

PO 03

Design solutions for broadly-defined engineering technology problems, and to design systems, components or processes to meet specified needs with appropriate consideration for public health and safety, as well as cultural, societal, environmental and sustainability concerns:

PO 04

Plan and conduct experimental investigations of broadly-defined problems, using data from relevant sources;

PO 05

Select and apply appropriate techniques, resources and modern engineering tools, with an understanding of their limitations;

PO 06

Function effectively as individuals, and as members or leaders in diverse technical teams;

PO 07

Communicate effectively with the engineering community and society at large;

PO 08

Demonstrate an awareness of and consideration for societal, health, safety, legal and cultural issues and their consequent responsibilities;

PO 09

Demonstrate an understanding of professional ethics, responsibilities and norms of engineering technology practices;

PO 10

Demonstrate an understanding of the impact of engineering practices, taking into account the need for sustainable development;

PO 11

Demonstrate an awareness of management, business practices and entrepreneurship and Engineering Management

PO 12

Recognize the need for professional development and to engage in independent and lifelong learning.

Course Syllabus

PGT 110/3 MULTIMEDIA SYSTEM

Course Synopsis

Multimedia software systems incorporate various media, such as text, images, video and audio, to provide rich experiences for users. This is a course in the design, implementation and evaluation of multimedia systems. The course include the development and use of various multimedia data types; the design and evaluation of multimedia systems; and to plan, develop and implement multimedia projects.

PGT 210/3 MEASUREMENT AND INSTRUMENTATION

Course Synopsis

This course covers Theory and Constructional details of Analog instruments. In this course, sources of errors in Energy Meter and their compensation are included together with different types of Power Factor Meters. This course also discusses the use of Cathode ray Oscilloscope and the importance of their components.

PGT 212/3 ELECTRONIC COMMUNICATION TECHNOLOGY

Course Synopsis

This subject introduces the students about the basic communication components and circuits used

in communication systems. This includes the architecture of radio frequency amplifiers, mixers, AM and FM modulators and demodulators, transmitter circuits and receiver's circuits design. Practical exercises such as design, measurement and analyze of the circuit and output signal in the communication systems which improve understanding and develop skills in communication electronic field.

PGT 314/3 OPTICAL TECHNOLOGY

Course Synopsis

The students studying this module will develop a basic understanding of the principles and practices of modern optoelectronic devices and their important functions for applications in optical communication. Optoelectronic Communications which includes laser, fiber optics and amplifier fundamentals. Semiconductor sources, optical detector, optical amplifiers, optical devices, introduction to modern optics. tailored to the needs of the optoelectronic, photonics and optical communications industry. Practical skills in optical fiber sustems and measurement will also be acquired.

PGT 315/3 RF AND MICROWAVE TECHNOLOGY

Course Synopsis

This course thoroughly covers the basic principles, analysis, design and measurement techniques necessary for an introductory undergraduate or graduate course in microwave engineering.

Reference Book

PGT 410/3 SATELLITE TECHNOLOGY

Course Synopsis

The course aims to give the student a thorough but practical understanding of the principles and technological issues of satellite technology.

Bachelor of Electronic Engineering Technology (Honours) (Electronic Network Design)

Programme Educational Objectives (PEO)

PEO 01

Electronic Network Design Technology graduates who are competent in both technology theory and practice.

PEO 02

Electronic Network Design Technology graduates who are able to demonstrate leadership and contribute to team success and manage projects in a multidisciplinary environment.

PEO 03

Electronic Network Design Technology graduates who are able to make contributions to knowledge.

PEO 04

Electronic Network Design Technology graduates who are able to demonstrate an ethical commitment to the community.

Programme Outcomes (PO)

PO 01

Apply knowledge of mathematics, science, engineering fundamentals and engineering specialization principles to defined and applied engineering procedures, processes, systems or methodologies;

PO 02

Solve broadly-defined engineering problems systematically to reach substantiated conclusions, using tools and techniques appropriate to their discipline or area of specialization;

PO 03

Design solutions for broadly-defined engineering technology problems, and to design systems, components or processes to meet specified needs with appropriate consideration for public health and safety, as well as cultural, societal, environmental and sustainability concerns;

PO 04

Plan and conduct experimental investigations of broadly-defined problems, using data from relevant sources:

PO 05

Select and apply appropriate techniques, resources and modern engineering tools, with an understanding of their limitations;

PO 06

Function effectively as individuals, and as members or leaders in diverse technical teams;

PO 07

Communicate effectively with the engineering community and society at large;

PO 08

Demonstrate an awareness of and consideration for societal, health, safety, legal and cultural issues and their consequent responsibilities;

PO 09

Demonstrate an understanding of professional ethics, responsibilities and norms of engineering technology practices;

PO 10

Demonstrate an awareness of management, business practices and entrepreneurship;

PO 11

Demonstrate an understanding of the impact of engineering practices, taking into account the need for sustainable development;

PO 12

Recognize the need for professional development and to engage in independent and lifelong learning.

Curriculum Structure For Bachelor of Electronic Engineering Technology (Honours) (Electronic Network Design)

| YEAR | FIRST | | SECOND | | THIRD | | FOURTH | |
|--------------------------------|---|--|---|--|--|--|---|-----------------------------------|
| SEMESTER | I | II | III | IV | v | VI | VII | VIII |
| Discipline Core (102) | PGT 100/3 Networking Fundamentals | PGT 104/3 Digital Electronics | PGT 200/3 Operating Systems | PGT 204/3 Internetworking Technology I | PGT 301/3 Communication Systems | PGT 300/4 Final Year Project I | PGT 400/6 Final Year Project II | PIT 4XX/12 Industrial Training |
| | PGT 101/3 Electric Circuit Principles | PGT 105/3 Electrical Engineering Technology | PGT 201/3 Microprocessor | PGT 205/3 Signals and Systems | PGT 302/3 Embedded Software Technology | PGT 305/3 Network Management | PGT 401/3 Network Security Technology | |
| | PGT 102/3 Engineering Science | PGT 106/3 C Programming | PGT 202/3 Analog Electronics I | PGT 206/3 Computer Architecture | PGT 303/3 Data Structures | PGT 306/3 Network Modeling | PGT XXX/3 Elective II | |
| | PGT 103/3 Computer Technology | PGT 107/2 Writing in Engineering Technology | PGT 203/3 Database Management Systems | PGT 207/3 Object Oriented Programming | PGT 304/3 Internetworking Technology II | PGT 307/3 Programming for Networking | PGT XXX/3 Elective III | |
| | | | | | | PGT XXX/3 Elective I | | |

Elective: CCNA I, CCNA II, CCNA III, CCNA IV, Mobile Computing, Web Programming, Artificial Intelligent

Course Syllabus

PGT 100/3 NETWORKING FUNDAMENTALS

Course Synopsis

This course prepares the students to know how computers are connected. In addition, students are able to connect the computer to the Internet both wired and wireless. The students are expected to be able to troubleshoot problems that cause network disconnection, slow and effectiveness.

Course Outcomes

- 1. Ability to utilize the Internet exploring software to gather, explore and discover the importance of Internet.
- Ability to apply the knowledge of networking to set up the local area network, to connect two computer together and identify the network IP
- Ability to solve and troubleshoot cause by network not connected, slow and distortion.

PGT 101/3 ELECTRIC CIRCUIT PRINCIPLES

Course Synopsis

This course covers introduction to the basic of electrical measurements, Ohm's Law, Series and Parallel Circuits, Circuit Theorems and Conversions and RLC circuits. This course will expose the students to the elements and principles of electrical circuit theory with appropriate to any RLC circuit applications. The laboratory sessions will complement the theories given in a class.

Course Outcomes

- Ability to perform the basic concept of electrical measurement and RLC Circuits Theorems
- Ability to apply the concept of Ohm' Law, Series and Parallel Circuits, and Circuit Theorems for any RLC Circuits.

 Ability to analyze RLC Circuits related to electric circuits applications

PGT 102/3 ENGINEERING SCIENCE

Course Synopsis

This course covers introduction to physic and science which are force and motion, circular motion, work, power and energy, electrostatic, magnetism and electric current and resistance. Fundamental physics is combined with problem solving and engineering skills through suitable experiments. This course will expose the students to the elements and principles of basic concepts of physics and its application.

Course Outcomes

- Ability to describe standard unit, apply the concept of force and motion and analyze work, energy and power principles
- 2. Ability to apply circular motion principles in oscillation and wave.
- 3. Ability to define and apply the basics of electrostatic and electromagnetism
- 4. Ability to explain and calculate electric current and resistivity

PGT 103/3 COMPUTER TECHNOLOGY

Course Synopsis

This course prepares the student to be familiar with computer hardware and software available in the market. The hardware includes CPU, memories and I/O such as monitor, keyboard and mouse. Computer software contains various Operating Systems (OS) such as Android, GNU/Linux, Microsoft and Apple based OS. Introduction to Free Open Source Software (FOSS) concept and philosophy, various applications such as Office Suite (word processor and spread sheet) will be explained.

Course Outcomes

- Ability to illustrate concepts and principles of various hardware components in a computer system
- Ability to interpret Free/Open Source Software (FOSS) and proprietary software
- Ability to justify suitable software for the right application/ task.

PGT 104/3 DIGITAL ELECTRONICS

Course Synopsis

Introduction and discussion of fundamental of digital circuit design and analysis. The lecture and tutorial exercise covers the following topics: Boolean Algebra, Numbering System, Basic Logic Gates, Combinational Circuit Design, Timing Diagram, Bi-Stable Memory Device and Sequential Circuit Design.

Course Outcomes

- 1. Ability to describe basic numbering system and basic theory of binary system.
- 2. Ability to analyze Boolean functions and logic circuit in digital applications
- Ability to design combinational and sequential logic circuit to solve mathematical equations in terms of Boolean Functions.

- Thomas L. Floyd, "Digital Fundamentals:, 10th Ed., Pearson Prentice Hall, 2009.
- Floyd. TL, "Digital Fundamentals", 9th Ed., Prentice Hall. 2006.

PGT 105/3 ELECTRICAL ENGINEERING TECHNOLOGY

Course Synopsis

This course focuses on the fundamental of electrical engineering and power electronics which consists of two parts; electrical machinery and instrumentation. This course will provide the basic knowledge in power transmission, machinery, power processing devices and metering. The topics covered in this course are transformers, AC and DC machines, AC and DC meters, AC and DC bridges, AC and DC converters, and sensors & transducers

Course Outcomes

- Ability to apply and solve the problems on transformers, dc machines and ac machines with respect to their efficiency, equivalent circuits and losses.
- Ability to analyze the problems on the basic operations of dc and ac meters, dc and ac bridges
- Ability to design and develop on sensors & transducers to meet a specified requirement.

PGT 106/3 C PROGRAMMING

Course Synopsis

This course introduces basic programming using high-level language (C language). The main objective of this course is to prepare the students with the ability of problem solving with programming, to be able to do analysis with programming tools

such as flowcharts and pseudo code and then to implement them by developing C programmes.

Course Outcomes

- Ability to describe and explain programming concepts and principles.
- Ability to apply GNU/Linux for coding, compiling, executing and debugging computer programs.
- Ability to analyze and solve engineering-related problems using computer programming techniques.
- Ability to evaluate programming techniques and tools to design computer programs.

- Deitel and Deitel, Sudin,
 S.,Ahmad, R.B. and Yacob, Y.,

- Sprankle and Maureen,
 "Problem Solving and Programming Concepts" 7th Ed., Prentice Hall, 2006.
- 5. Etter, D.M., "Engineering Problem Solving with C", 3rd Ed., Prentice Hall, 2004.

Course Synopsis

To expose the students to the common requirements and expectations of writing as an engineering technologist; as well as to the format and techniques of writing various types of engineering technology documents.

Course Outcomes

- Ability to produce engineering documents in consideration of ethics, spelling, grammar and avoidance of typing errors while at the same time considering the flow and continuity of ideas.
- Ability to explain, solve and analyse group work involving presentations, reports and communication task.
- 3. Ability to compose and write common engineering documents and to discover sources of engineering information

PGT 200/3 OPERATING SYSTEMS

Course Synopsis

This course introduces the fundamental of operating systems. It also covers theoretical and practical issues underlying operating system design and implementation. The topics include inter process communication, process scheduling, deadlock, memory management, virtual memory and file management system. Formal principles are illustrated with examples and case studies of modern operating system.

Course Outcomes

- 1. The ability to discuss basic operating system concepts
- 2. The ability to implement basic operating system concepts
- 3. The ability to analyze implementations of basic operating system concepts

References

- Modern Operating Systems 3/E (Andrew S. Tanenbaum), Prentice Hall. 2008.

PGT 201/3 MICROPROCESSOR

Course Synopsis

The aim of this course is to study the Intel 8085 microprocessor architecture and relate that knowledge to the design of microprocessor based systems. This includes the design technique for designing memory, input and output for the systems. The study of 8085 instruction set and various software development tools are also emphasized as the knowledge are needed in the design of the microprocessor-based systems.

Course Outcomes

- 1. Ability to describe the theory and basic architecture of microprocessor system.
- 2. Ability to write an assembly language programming
- Ability to describe and capable of interfacing the microprocessor to the I/O devices
- 4. Ability to design a simple application on a microprocessor-based system

PGT 202/3 ANALOG ELECTRONICS I

Course Synopsis

This course exposes the student the basic knowledge in analog electronic. The exposure encompasses amplifier design based on bipolar and field effect transistors, for single and multi stage, power amplifier, frequency response analysis of amplifiers. Emphasis is placed on basic design aspects and applications. The course has been designed to provide basic analog electronic skills covering theories and practices.

Course Outcomes

- Ability to analyze DC and AC, small-signal analysis and frequency performance of basic configurations of amplifier (BJT and FET).
- Ability to design basic configurations of BJT and FET amplifiers.
- 3. Ability to define, analyze and perform simple design of classes A, B and AB of BJT and FET power amplifiers in term of their equivalent circuit and gain.

PGT 203/3 DATABASE MANAGEMENT SYSTEMS

Course Synopsis

The subject will focus on the concept of database system and architecture. This includes data models, schemas and instances and system environment. Students will be exposed with data modeling by using high level conceptual data models for relational database design that includes Entity Relationship Diagram(ERD), Structured Query Language (SQL) and normalization and also covers database storage and management.

Course Outcomes

- Ability to explain the database system concepts
- 2. Ability to write and analyze SQL statements
- Ability to design a relational database with Entity Relationship Diagram(ERD)
- 4. Ability to normalize and evaluate a relational database
- 5. Ability to explain the database storage and management

PGT 204/3 INTERNETWORKING TECHNOLOGY I

Course Synopsis

This course will introduce students with the fundamental knowledge and tools for study computer networks. Principles of computer network cover so many aspects and it is expanding rigorously. Therefore this course focuses on the fundamental concept and theories. applications and advantages of computer networks. Related technologies such as Local Area Network, Wide Area Network and techniques use in data transmission as well as latest technologies. Practical exercises such as design. install and testing of a simple computer internetworking which improve understanding and develop skills on networking are integrated in laboratories exercises

Course Outcomes

- Ability to understand the basic concept, advantages and computer networking technologies.
- Ability to use GNU/Linux for coding, compile, execute and test network based programming.
- Ability to identify, analyze and solve network problems using hardware and software tools.
- 4. Ability to think logically, creative and innovative
- 5. Ability to work in a team and communicate effectively

PGT 205/3 SIGNALS AND SYSTEMS

Course Synopsis

This course introduce student to mathematical foundation and computational tools for processing continuous-time and discrete-time signals in both time and frequency domains. Key concepts and tools introduced and discussed in this class include linear time-invariant sustems, impulse response, frequency response, convolution, filtering, sampling, and Fourier transform, Laplace Transform and z-Transform. This course serves as entry and prerequisite for any higher level course in the fields of signal processing, communications, and control.

Course Outcomes

- Ability to describe the concept of signal and system classifications, impulse response and convolution in both analog and discrete time domain.
- Ability to apply and analyze the concept of Fourier representation of analog and discrete signals
- 3. Ability to differentiate the different forms and properties of Fourier transforms, concept of frequency response in analog and discrete systems.
- Ability to evaluate and perform sampling and reconstruction of analog signals using Laplace transform and Z-transform
- Ability to perform analysis of linear and time-invariant analog and discrete systems.
- Ability to apply analysis tools to mathematically analyze continuous and discrete signals and systems.

PGT 206/3 COMPUTER ARCHITECTURE

Course Synopsis

This course covers both the architectural and organizational aspects of computer systems. Architectural aspects of a system are defined as the features that are available to the operating system

kernel such as the instruction set, data representations and peripheral interfaces. On the other hand, organizational aspects of a system are defined as the physical implementations that realize the features given for a system. These include the design of basic building blocks such as the ALU and the control unit, as well as the logic level interface of both internal and external units. This course expects the students to have a good fundamental on digital logic design (both combinatorial and sequential logic).

Course Outcomes

- 1. Ability to discuss the theoretical aspects of computer organization and architecture
- 2. Ability to design basic Central Processing Unit (CPU) based on given specifications
- Ability to analyze design issues involving cost and performance using theoretical knowledge and/or simulation tools

PGT 207/3 OBJECT-ORIENTED PROGRAMMING

Course Synopsis

This course discuss objectoriented problem solving in Java, with attention to general as well as language-specific issues including applications, event-driven programming; elements of graphical user interfaces (GUIs); inheritance and polymorphism; exception handling; packages; applets; swing.

Course Outcomes

- Ability to explain the object oriented paradigm
- 2. Ability to apply the concepts of class and object
- 3. Ability to apply the concepts of inheritance and polymorphism
- 4. Ability to develop JAVA standalone program and applet

PGT 300/4 FINAL YEAR PROJECT I

PGT 400/4 FINAL YEAR PROJECT II

Course Synopsis

This is a research project in connection with engineering technology problem and under the guidance of a faculty member. The project undertaken may fall under one of the following areas: mathematical analysis, experimental tests, computer simulation, hardware and/or software development, device fabrication. For both FYP I and II, each student prepares a comprehensive engineering report, present and demonstrate findings and results of the project work.

Course Outcomes

- Ability to apply and integrate theory and practical which has been studied to solve the engineering problems.
- 2. Ability to develop new design or upgrade the existing design.
- Ability to develop appropriate methodology for the research/ problem.
- Ability to write the technical report (dissertation), present and justify/defend the project's fact.

PGT 301/3 COMMUNICATION SYSTEMS

Course Synopsis

This course will cover all the basic principles and concepts of communication system including the basic elements of communications, signal analysis, amplitude modulation, angle modulations and digital modulations, as well as transmission channels and medium. In addition, introductions to signal propagations and calculations of signal to noise ratio are also introduced to relate the students with real world applications.

Course Outcomes

- Ability to identify and explain basic principles of communication systems, and the essential of communication system in real world.
- Ability to analyze noise and types of analog modulation and digital modulation and calculate SNR.
- Ability to use the laboratory equipments and instruments to measure and analyze output signals and perform some troubleshooting.
- Ability to apply related software tool in understanding principle of communication system.

PGT 302/3 EMBEDDED SOFTWARE TECHNOLOGY

Course Synopsis

This course introduces a real-world embedded system software technology development environment from hardware and software perspectives. It applies the concept of open source embedded operating system (GNU/Linux) and using appropriate tools in designing a system. Few of the techniques such as advance C programming, scripting and external hardware interfacing on single board computer (SBC). Student will be

assigned with laboratory-oriented design projects, with emphasis on the use of open source and GNU/Linux OS and Free Software tools; and hardware interfacing.

Course Outcomes

- Ability to describe the concepts of embedded OS
- 2. Ability to apply the concepts of embedded OS in designing sustem using appropriate tools
- 3. Ability to evaluate the system using appropriate tools

PGT 303/3 DATA STRUCTURES

Course Synopsis

This course introduces data types, algorithm and data structures. The topics of array, pointers, structure and union in C is revisited. Then, the linear data structure i.e. stack, queue linked list and non linear data structure i.e. tree and graph is discussed in depth. In addition sorting and searching algorithm are also included.

Course Outcomes

- 1. Ability to learn the systematic way of solving problems
- 2. Ability to apply different methods of organizing large amounts of data

 Ability to develop and implement the different data structures in solving problems

PGT 304/3 INTERNETWORKING TECHNOLOGY II

Course Synopsis

Comprehensive overview of communications software and hardware involved in wide area networks and their relationship to local area networks are introduced. The course is designed for computer networking majors. The students are able to identify the major components of the WANSs (Asynchronous Transfer Mode, Integrated Services Digital Network, Synchronous Optical Network, etc.) and the flow of data between the bridges and routers.

Course Outcomes

- L. Ability to understand and distinguish between the principles of the OSI and TCP/IP Models, their layers and the open communication principles for LAN and WAN interconnections
- 2. Ability to apply and investigate advanced networking protocols, mechanisms and technique such as IP addressing, subnetting, connection orientation, name resolution, and network security

 Ability to design the basic of router configuration and perform basic Router Configuration

PGT 305/3 NETWORK MANAGEMENT

Course Synopsis

The course aims to give knowledge of operation, and maintenance of modern computer and global networks. Network Management basics, and standards is described with focus on Internet Management with the aid of Simple Network Management Protocol (SNMP), as well as the application of the same. The course also gives practical knowledge in system and network administration as well as network supervision.

Course Outcomes

 Ability to understand five major functional areas of network management, namely Configuration and Fault Management, Accounting, Performance and Security Management;

- 2. Ability to understand how to formulate an effective Network Sustems Design Plan.
- Ability to understand the need for security in networking monitoring and control;
- Ability to design the network according to the extent, breadth and depth of a complete network management plan for a moderate to large network enterprise.
- Ability to understanding of what administrative positions are required, to manage a computer network.

PGT 306/3 NETWORK MODELLING

Course Synopsis

This course introduces the principle and technique in modeling and analyzing the computer network using software and discrete event simulator technique. The simulation technique is a powerful tool to analyze the network without the possibilities to destroy the real network. The students are able to understand the concept of network model, develop and analyze the computer network using this simulation technique.

Course Outcomes

- Ability to utilize the Internet exploring software to gather, explore and discover the importance of Internet.
- Ability to apply the knowledge of networking to set up the local area network, to connect two computer together and identify the network IP
- Ability to solve and troubleshoot cause by network not connected, slow and distortion.

PGT 307/3 PROGRAMMING FOR NETWORKING

Course Synopsis

The aims of this course are to introduce the students of the programming in computer network and get familiar with the mechanism of protocols that consists in the network. The skills to programme the network protocols to works properly to transfer data from the sender to the receiver are exposed. The students are able to analyze, test, develop and design the protocols that are setting up a network.

- Ability to understand the concepts of network programming and the related network protocols involved
- 2. Ability to develop application by using network programming techniques learned
- Ability to apply network programming in computer networking environments

- Ability to analyze network security threats and related current issues
- 4. Ability to identify and investigate solutions to network security threats

PGT 401/3 NETWORK SECURITY TECHNOLOGY

Course Synopsis

The aims of this course are to introduce basic concept of network security technology. It includes concepts, security practice and encryption and decryption techniques. Discussion in network security will involved network defence concepts and network intruders. Firewall application software will be discussed together with computer security services and security management.

Course Outcomes

- Ability to understand basic issues, concepts, principles and mechanism in modern network security technology.
- Ability to understand how network security concepts are applied in the global network.

Bachelor of Electronic Engineering Technology (Honours) (Integrated Electronics)

Programme Objectives (PEO)

PEO 01

Integrated Electronics graduates who are competent in both technology theory and practice.

PEO 02

Integrated Electronics graduates who are able to demonstrate leadership and contribute to team success and manage projects in a multidisciplinary environment.

PEO 03

Integrated Electronics graduates who are able to make contributions to knowledge.

PEO 04

Integrated Electronics graduates who are able to demonstrate an ethical commitment to the community.

Programme Outcome (PO)

PO 01

Apply knowledge of mathematics, science, engineering fundamentals and engineering specialization principles to defined and applied engineering procedures, processes, systems or methodologies;

PO 02

Solve broadly-defined engineering problems systematically to reach substantiated conclusions, using tools and techniques appropriate to their discipline or area of specialization;

PO 03

Design solutions for broadly-defined engineering technology problems, and to design systems, components or processes to meet specified needs with appropriate consideration for public health and safety, as well as cultural, societal, environmental and sustainability concerns;

PO 04

Plan and conduct experimental investigations of broadly-defined problems, using data from relevant sources:

PO 05

Select and apply appropriate techniques, resources and modern engineering tools, with an understanding of their limitations;

PO 06

Function effectively as individuals, and as members or leaders in diverse technical teams;

PO 07

Communicate effectively with the engineering community and society at large;

PO 08

Demonstrate an awareness of and consideration for societal, health, safety, legal and cultural issues and their consequent responsibilities;

PO 09

Demonstrate an understanding of professional ethics, responsibilities and norms of engineering technology practices;

PO 10

Demonstrate an understanding of the impact of engineering practices, taking into account the need for sustainable development;

PO 11

Demonstrate an awareness of management, business practices and entrepreneurship and Engineering Management

PO 12

Recognize the need for professional development and to engage in independent and lifelong learning.

Discipline Core

PGT 101/3 ELECTRIC CIRCUIT PRINCIPLES

Course Synopsis

This course covers introduction to the basic of electrical measurements, Ohm's Law, Series and Parallel Circuits, Circuit Theorems and Conversions and RLC circuits. This course will expose the students to the elements and principles of electrical circuit theory with appropriate to any RLC circuit applications. The laboratory sessions will complement the theories given in a class.

PGT 102/3 ENGINEERING SCIENCE

Course Synopsis

This course covers introduction to physic and science which are force and motion, circular motion, work, power and energy, electrostatic, magnetism and electric current and resistance. Fundamental physics is combined with problem solving and engineering skills through suitable experiments. This course will expose the students to the elements and principles of basic concepts of physics and its application.

PGT 103/3 COMPUTER TECHNOLOGY

Course Synopsis

This course prepares the student to be familiar with computer hardware and software available in the market. The hardware includes CPU, memories and I/O such as monitor, keyboard and mouse. Computer software contains various Operating Systems (OS) such as Android, GNU/Linux, Microsoft and Apple based OS. Introduction to Free Open Source Software (FOSS) concept and philosophy, various applications such as Office Suite (word processor and spread sheet) will be explained.

- 3. M. Morris Mano, "Computer System Architecture", Third Edition, Prentice-Hall.
- 4. Carl Hamacher, Zvonko Vranesic, Safwat Zaky, "Computer Organization", Fifth Edition, McGraw Hill

Course Synopsis

The course is tailored to give students a broad introduction to material properties and limitations. The subject will cover class of material properties, measurement of the properties, and fundamental knowledge to make material selection with better properties. The common micro-structural features of different material classes will be outlined in order to relate material with its process as well as performance.

PGT 105/3 ELECTRICAL ENGINEERING TECHNOLOGY

Course Synopsis

This course focuses on the fundamental of electrical engineering and power electronics which consists of two parts; electrical machinery and instrumentation. This course will provide the basic knowledge in power transmission, machinery, power processing devices and metering. The topics covered in this course are transformers, AC and DC machines, AC and DC meters, AC and DC bridges, AC and DC converters, and sensors & transducers

PGT 104/3 DIGITAL ELECTRONICS

Course Synopsis

Introduction and discussion of fundamental of digital circuit design and analysis. The lecture and tutorial exercise covers the following topics: Boolean Algebra, Numbering System, Basic Logic Gates, Combinational Circuit Design, Timing Diagram, Bi-Stable Memory Device and Sequential Circuit Design.

PGT 106/3 C PROGRAMMING

Course Synopsis

This course introduces basic programming using high-level language (C language). The main objective of this course is to prepare the students with the ability of problem solving with programming, to be able to do analysis with programming tools such as flowcharts and pseudo code and then to implement them by developing C programmes.

PGT 107/2 WRITING IN ENGINEERING TECHNOLOGY

Course Synopsis

To expose the students to the common requirements and expectations of writing as an engineering technologist; as well as to the format and techniques of writing various types of engineering technology documents.

References

- Leo Finkelstein Jr (2008). Pocket Book of Technical Writing for Engineers and Scientist, 3rd Ed. (New York: McGraw Hill International Edition

PGT 211/3 ELECTROMAGNETIC THEORY

Course Synopsis

This is the first course in Electromagnetic Field Theory at the undergraduate level. It provides

basic concepts and understanding of fundamental laws of electrostatics and magnetostatics. Applications of these laws for different field configurations are also introduced. The course also introduces transmission line theory and the use of transmission lines as circuit elements. Calculation of transmission line parameters like VSWR, reflection coefficient and impedance matching using Smith's chart is also included in this course.

PGT 201/3 MICROPROCESSOR

Course Synopsis

The aim of this course is to study the Intel 8085 microprocessor architecture and relate that knowledge to the design of microprocessor based systems. This includes the design technique for designing memory, input and output for the systems. The study of 8085 instruction set and various software development tools are also emphasized as the knowledge are needed in the design of the microprocessor-based systems.

PGT 202/3 ANALOGUE ELECTRONICS I

Course Synopsis

This course exposes the student the basic knowledge in analog electronic. The exposure encompasses amplifier design based on bipolar and field effect transistors, for single and multi stage, power amplifier, frequency response analysis of amplifiers. Emphasis is placed on basic design aspects and applications. The course has been designed to provide basic analog electronic skills covering theories and practices.

References

- Thomas L. Floyd, "Electronic Devices", 8th Edition, Pearson, 2008.

PGT 207/3 OBJECT-ORIENTED PROGRAMMING

Course Synopsis

This course discuss objectoriented problem solving in Java, with attention to general as well as language-specific issues including applications, event-driven programming; elements of graphical user interfaces (GUIs); inheritance and polymorphism; exception handling; packages; applets; swing.

PGT 213/3 ANALOGUE ELECTRONICS II

Course Synopsis

This course offers the students an exposure to the Operational Amplifier: Operation, differential amplifier, common-mode, parameters, basic op-amp, practical op-amp circuits, opamp datasheet; Applications of op-amp and frequency response: Summing amplifier, Voltage follower, Comparator, Integrator, Differentiator, frequency response and compensation; Feedback Circuits: Concepts of feedback, tupes of feedback connection. practical feedback circuit, feedback amplifier; oscillator: Basic operating principles of an oscillator, phase shift, Wien Bridge, Crystal oscillator, uni-junction.

Active Analog Filters: Basic filter, filter response characteristics, low-pass filter, high-pass filter, band-pass filter, band-stop filter, frequency response measurement, design of filter, Butterworth, Chebychev and Elliptic

PGT 206/3 COMPUTER ARCHITECTURE

Course Synopsis

This course covers both the architectural and organizational aspects of computer sustems. Architectural aspects of a system are defined as the features that are available to the operating system kernel such as the instruction set, data representations and peripheral interfaces. On the other hand, organizational aspects of a system are defined as the physical implementations that realize the features given for a system. These include the design of basic building blocks such as the ALU and the control unit, as well as the logic level interface of both internal and external units. This course expects the students to have a good fundamental on digital logic design (both combinatorial and sequential logic).

PGT 220/3 VLSI DESIGN

Course Synopsis

The course provides the students an exposure on basic logic circuits design, layout design, layout simulation of integrated circuits, as well as basic integrated circuits design techniques.

References

PGT 205/3 SIGNALS AND SYSTEMS

Course Synopsis

This course introduce student to mathematical foundation and computational tools for processing continuous-time and discrete-time signals in both time and frequency domains. Key concepts and tools introduced and discussed in this class include linear time-invariant systems, impulse response, frequency response, convolution, filtering, sampling, and Fourier transform, Laplace Transform and z-Transform. This course serves as entry and prerequisite for any

higher level course in the fields of signal processing, communications, and control.

PGT 301/3 COMMUNICATION SYSTEMS

Course Synopsis

This course will cover all the basic principles and concepts of communication system including the basic elements of communications, signal analysis, amplitude modulation, angle modulations and digital modulations, as well as transmission channels and medium. In addition, introductions to signal propagations and calculations of signal to noise ratio are also introduced to relate the students with real world applications.

PGT 320/3 POWER ELECTRONICS

Course Synopsis

Topics covered are:
Fundamental Concepts of Power
Electronics, Power Semiconductor
Devices, Power Electronic Circuits,
AC-DC Conversion, AC-AC
Conversion, DC-DC Conversion and
DC-AC Conversion.

- Muhammad H. Rashid. (2004). Power Electronics: Circuits, Devices & Applications. 3rd ed. Pearson: Prentice-Hall.

PGT 322/3 MICROCONTROLLER

Course Synopsis

The aim or this cource is to study the concept and requirement of embededded system. This includes the characteristic of embededded system, hardware and software development, single chip microecontroller and programming technique in assembly language and C, basic multitasking concept, developing and embedded system application.

References

PGT 310/3 DIGITAL SIGNAL PROCESSING

Course Synopsis

Digital Signal Processing (DSP) has continued to have a major and increasing impact in many key areas of technology including telecommunication, digital television and media, biomedicine, VLSI design etc. DSP is now at the core of many new and emerging digital products and applications in the information society and is a core subject in most electronic/computer/ communication engineering curricula. This course is designed to give the students the necessary mathematical tools to analyze discrete time signals and systems. The course also includes various techniques for the design of digital filters and their implementations using DSP processors.

PGT 334/3 NANOSYSTEM DESIGN

Course Synopsis

Nanosystem design is an advanced nanosystem course and divided into three parts which are nanosystems design, parallel architecture and complex integrated nanosystems and nanoelectronics and nanowire. Nanosystem design part will cover the topics on basis of nanomaterials, nanoelectronic and nanoarchitectures and application of nanodevices in integrated system. In parallel architecture and complex integrated nanosystems the topics that covered are architecture principles and nanosystems as information-processing machines. Otherwise, in nanoelectronics and nanowire the topics that covered are nanoelectronics with tunneling

devices, nanoelectronics with superconducting devices and basic of nanowire development and characterization.

PGT 333/3 RELIABILITY & FAILURE ANALYSIS

Course Synopsis

This course is basically divided into two areas: Reliability & Failure Analysis. In the first section of

reliability, students will learn the concept of reliability, its terms & definitions, the different types of reliability distributions and also the different types of reliability prediction techniques such as FMEA & FTA. In the second section of failure analysis, students will be exposed to the different types of FA techniques commonly conducted on a failed semiconductor device and the test instrumentation associated with each technique.

PGT 420/3 INSTRUMENTATION

Course Synopsis

This course covers the fundamental of electronic instrumentation. This includes the working principle and transduction properties of sensors and transducers. Importance and techniques of signal conditioning is emphasized. Element and principle of data acquisition and their applications are discussed. Modern stand-alone and computer-based measurement instruments are covered.

References

PGT 430/3 MICRO-ELECTRO-MECHANICAL SYSTEM

Course Synopsis

This course will focus on design and simulation of N/MEMSdevices. The design will include several of analysis types suchas structural, electrical and mechanical while the fabricationtechnology will focus on bulk and surface micromachining. Thiscourse will also discuss the application and technology of N/MEMS packaging in various fields.

the guidance of a faculty member. The project undertaken may fall under one of the following areas: mathematical analysis, experimental tests, computer simulation, hardware and/or software development, device fabrication. For both FYP I and II, each student prepares a comprehensive engineering report, present and demonstrate findings and results of the project work.

PGT 300/4 FINAL YEAR PROJECT I

PGT 400/4 FINAL YEAR PROJECT II

Course Synopsis

This is a research project in connection with engineering technology problem and under

Bachelor of Mechanical Engineering Technology (Honours) (Machining)

Programme Objectives (PEO)

PEO 01

To produce competent Engineering Technologists who are able to apply principles of science, engineering and modern technology in solving current and future problems related to manufacturing engineering technology.

PEO 02

To produce Engineering Technologists in manufacturing engineering field who perform work and duty ethically with high moral values and responsibility to God, nation and societies.

PEO 03

To produce creative and innovative Engineering Technologist in research and development in fulfilling the nation's requirements.

PEO 04

To produce Engineering Technologists who are able to communicate effectively with good leadership as well as able to function in teamwork environment.

PEO 05

To produce Engineering Technologists that shows enthusiasm in engaging long-life learning through continuity of learning, technical practices and professional development.

Programme Outcomes (PO)

PO1

Apply knowledge of mathematics, science, engineering fundamentals and engineering specialization principles to define and apply engineering procedures, processes, systems or methodologies.

PO2

Solve broadly-defined engineering problems systematically to reach substantiated conclusions, using tools and techniques appropriate to their discipline or area of specialization;

PO3

Design solutions for broadly-defined engineering technology problems, and to design systems, components or processes to meet specified needs with appropriate consideration for public health and safety, as well as cultural, societal, environmental and sustainability concerns;

P04

Plan and conduct experimental investigations of broadly-defined problems, using data from relevant sources:

PO5

Select and apply appropriate techniques, resources and modern engineering tools, with an understanding of their limitations;

PO6

Function effectively as individuals, and as members or leaders in diverse technical teams;

PO7

Communicate effectively with the engineering community and society at large;

PO8

Demonstrate an awareness of and consideration for societal, health, safety, legal and cultural issues and their consequent responsibilities;

PO9

Demonstrate an understanding of professional ethics, responsibilities and norms of engineering technology practices;

PO10

Demonstrate an understanding of the impact of engineering practices, taking into account the need for sustainable development;

PO11

Demonstrate an awareness of management, business practices and entrepreneurship;

PO12

Recognize the need for professional development and to engage in independent and lifelong learning.

PDT101/3 STATICS AND DYNAMICS

Course Synopsis

This course comprises two parts, namely; statics and dynamics. In statics, the basic principles of engineering mechanics such as forces, moments and friction are introduced. Students are required to apply this basic knowledge in analysing the equilibrium of rigid bodies, as well as the stability of a structure. The subjects of dunamics cover the concept of kinematics and kinetics. Kinematics treats the geometric aspects of the motion, whereas kinetics analuses the forces that cause the motion. Analyses in relation to kinetic problems are solved using acceleration method, principle of work and energy, and principle of impulse and momentum.

Course Outcomes

- Ability to apply and analyse the basic principles of physics related to static such as force, moment, Newton's First, second and Third Law, trusses, frame and machine.
- 2. Ability to apply and analyse the structures and frameworks problems by constructing, sketching and/or drawing free body diagram in ensuring static equillibrium.

- 3. Ability to apply and analyse the kinematics and kinetics for particles and systems of particles.
- 4. Ability to apply and analyse the planar kinematics and kinetics of a rigid body.

PDT106/3 ENGINEERING GRAPHICS

Course Synopsis

This course provides the skills to students the basics of Engineering Drawing, Computer Aided Drafting (CAD) and their engineering applications. The course covers the detail of Engineering Drawing for beginners followed with projection sustems, oblique and isometric sketches. The course also introduced the Computer Aided Drafting using dedicated software, AUTOCAD, which focuses on product design in 2D and 3D environment. Fundamental knowledge in dimensioning and geometrical tolerance (GDT) enhances student's ability in interpreting and assessing information from basic raw data of an engineering drawing.

Course Outcomes

- To apply the basic drafting, sketching engineering components, and common term used in engineering drawing.
- To apply orthographic, auxiliary view, cross section and isometric in engineering drawing.
- To apply geometric, dimensioning, and tolerancing (GDT) in engineering drawing.

4. To apply detail and assembly drawing in engineering drawing.

PDT109/2 WORKSHOP PRACTICE

Course Synopsis

This course is a practice of manufacturing process that is used in the industry to transform from raw material to finished products such as sand casting, vacuum casting, rapid prototyping, powder metallurgy, injection molding and heat treatment processes which

covers introduction, processes and application. Practical work will help students to gain effective understanding.

Course Outcomes

- Ability to describe and apply the solidification processes, injection molding and powder metallurgy.
- Ability to describe and apply the sheet metalworking and basic cutting operation, and arc and oxyfuel gas welding process.
- 3. Ability to describe and apply the rapid prototyping process.
- 4. Ability to work in group/ team during the laboratory session.

PDT110/3 METROLOGY

Course Synopsis

This course provides the skills to students the fundamental of metrology, measurement standards, and tolerance in measurement. The students are introduced to metrology equipment such as vernier calliper, micrometer, profile projector, gage block, coordinate measuring machine (CMM) and surface roughness measurer. The course also covers measurement techniques for a reference plane, angle measurement and surface measurement.

Course Outcomes

- Ability to define and describe metrology principles, language and system of measurement and GD&T
- Ability to define, describe and apply concepts, tools and techniques in linear and angular measurement.

 Ability to define, describe and apply concept, tools and techniques in surface measurement and coordinate measuring system.

PDT122/3 MATERIAL SCIENCE

Course Synopsis

This course introduces students to historical perspective of materials science and engineering fundamentals characteristics begin from understanding the atomic structures, atomic bonding in solids, crystal structures, mechanical and physical properties of materials. Students will then apply the

understanding on properties of materials through phase diagram, transformations and heat treatment processing on ferrous and nonferrous alloys, polymer and advanced materials.

Course Outcomes

- Ability to describe and explain the materials' atomic structures, bonding, crystal structure and imperfections.
- 2. Ability to explain and analyse the mechanical, physical properties of materials.
- Ability to explain and analyse the metal alloys microstructure, phase diagram and heat treatment processes.
- Ability to describe and explain machinability of ferrous and non-ferrous metal alloys, polymer materials and advanced materials...

PDT111/3 MANUFACTURING PROCESS

Course synopsis

This course explores the manufacturing process which used in industry to convert raw material into finished product. This course is devided into five sections. First, the introduction to manufacturing technology will be given, followed by material selection in manufacturing and heat treatment process. Secondly, the casting technology and various metal casting processes will be introduced including sand casting. investment casting, vacuum casting and other casting processes. Thirdly, overview of forming and shaping process will be given on rolling. forging, extrusion, drawing, sheetmetal forming, powder metallurgy, processing of ceramics, injection molding, and rapid prototyping process. Fourthly is about various joining process such as brazing. soldering, adhesive bonding, and mechanical fastening processes.

- Ability to describe the concept & methodologies of manufacturing technology and fundamental of materials in manufacturing.
- Ability to describe and analyze the concept & methodologies of solidification processes.
- 3. Ability to analyze and evaluate the concept of forming and shaping processes.
- Ability to analyze and evaluate the concept & methodologies of joining and assembly technology.

PDT107/2 COMPUTER AIDED DESIGN

Course Synopsis

This course focuses on giving exposure and skill to students about the basics of 3D modeling and its application in engineering field by using 3D Modeling software. This course includes details on 3D modeling followed by producing 2D drawing, assembly drawing, exploded drawing, surface modeling, rendering and animation. All this skill will help student to produce technical drawing and virtual prototype or model. This skill is very demanding in industry.

Course Outcomes

- Design 3d model of components by using catia or other equivalent CAD software.
- 2. Apply and construct technical/2d drawing using catia or other equivalent CAD software.
- Apply and construct assembly drawing and exploded drawing using catia or other equivalent CAD software.
- Apply and construct 3d animation and rendering for the components using catia or other equivalent CAD software.

PDT120/3 BASIC ELECTRICAL AND ELECTRONIC

Course Synopsis

This course provides basic knowledge of solving DC and AC electrical circuits. It also covers the fundamentals of electrical machines. The electronics section includes basic semi conductor diodes and transistors as well as the fundamentals of digital systems. At

the end of the semester students will be able to understand, analyze and apply basic electrical and electronics concept and principles.

Course Outcomes

- 1. Ability to implement and analyze basic electrical circuits.
- 2. Ability to analyze single phase and three phase a.c circuits.
- 3. Ability to analyze the three phase induction motors.
- Ability to implement and analyze basic electronics circuits.

PDT 112/3 THEORY IN MACHINING

Course Synopsis

In this course, the students learn the fundamentals and principles of metal cutting/machining processes common to current industrial practises. This includes single point orthogonal and turning operations, multi-point cutting operations. i.e. milling, drilling; and abrasive processes/grinding operations. Keu technological principles and mechanisms of chip formations are initially explained. This is followed by discussions and evaluations of various conventional machining operations for different part shape requirements. Basic toolings for machining operations are introduced along with the machine tool structures to perform the cutting operations. Material removal rate, machining time and machining economics are analyzed as part of machinability analyses.

Course Outcomes

- Ability to define and describe the principles of metal cutting and chip formation processes. Ability to apply merchant force equation for machining force relationships.
- 2. Ability to define, describe, and apply the concepts machine tools and machining operations for various engineering shapes.

- 3. Ability to define, describe, and apply the machining by abrasion for finishing process.
- Ability to define, describe, apply and evaluate the machinability of various metallic materials based on technical and economical factors.

PDT209/3 INDUSTRIAL SAFETY

Course synopsis

This course focuses on the aspect of creating safe working culture in reducing the risk in workplace. hence increasing productivity. The course will nurture the student so that they are able and competent in developing and creating safety management system, occupational health and environment in an organization. It also to ensure that the students are aware of the laws relating to the safety, health and environment, and responsive to issues of safety, health and environmental challenges and to take precautions to prevent injuries and illnesses in the workplace. This course will help students and those who will invovle with related aspects of safety, health and environment at work place towards the enhancement of knowledge in every aspect of health and environmental safety.

Course Outcomes

- 1. Ability to prepare and manage OSH management System
- Ability to understand and apply legal requirement related to OSH.
- 3. Ability to identify and manage OSH hazards in the workplace.

PDT210/4 CONVENTIONAL MACHINING

Course Sypnosis

This course is a practical exposure to conventional machining processes used in the industry to transform raw materials into final products that involve selecting of machining operation, cutting tools and cutting conditions to get good surface finish. Conventional machining operations involved include turning, milling, drilling and grinding.

Course Outcomes

- Ability to analyze and select machining operations, cutting tools and machining conditions to perform turning process.
- Ability to analyze and select machining operations, cutting tools and machining conditions to perform milling process.
- Ability to analyze and select machining operations, cutting tools and machining conditions to perform others machining process.
- Ability to perform in group/ team to design, evaluate and construct product with suitable machining process.

PDT202/3 HEAT TRANSFER

Course synopsis

This course is designed to enhance and extend student's ability to apply the principles of heat transfer especially its three major modes: conduction, convection, and radiation. In addition to the three modes of heat transfer, students will learn about heat transfer during phase changes (boiling and condensation heat transfer). Besides, It also covers the application of the principles of heat transfer and discusses the design of equipment to accomplish a certain requirement (heat exchangers).

Course Outcomes

- Ability to apply and analyse the basic principles of steady state conduction for one and multiple dimensions.
- 2. Ability to apply and analyse the principles of convection (viscous, inviscid, laminar and turbulent flows), and natural convection systems.
- Ability to apply and analyse the principles of radiation heat transfer.
- Ability to apply, analyse and evaluate the condensation and boiling heat transfer, and heat exchangers

PDT203/3 NOISE AND VIBRATION

Course Synopsis

The objective of the course is to introduce the student with the skills and knowledge in vibrations and noise disciplines. The syllabus covers the fundamental of vibration and oscillation motion, free vibration, force vibration, transient vibration, two degree of freedom systems, multiple degree of freedom systems the effects of noise and how to control the problems. The student will be well prepared towards industrial application

elements such as vibration control, vibration measurement, signal analysis methods, and noise control.

Course Outcomes

- Ability to measure free and force vibration for single degree of freedom.
- 2. Ability to analyse and measure the response of various systems (two degree of freedom) to various inputs (free and force excitation).
- Ability to analyse and evaluate the response of various systems (multi degrees of freedom) to various inputs (free and force excitation).
- 4. Ability to analyse and control the effects of the noise.

PDT206/3 JIGS AND FIXTURES DESIGN

Course Synopsis

This course introduces students to fundamental of Jig and Fixture Design in machining applications. It starts with types and functions of Jig and Fixture. In addition, students will be exposed to knowledge about classification of jig and fixture for selected operation on sample parts that apply in machining process. In this course, the tool drawing is important to students in order to design the jig and fixture according specifies methods and rule of metric dimensioning. This course also will introduce student to identify the principles and economic analysis of a tool design in jig and fixture application. One project will be given (in group) in order to evaluate the knowledge of students in this course.

Course outcomes

- Ability to demonstrate knowledge and comprehension of fundamental Jig and Fixture Design in machining application.
- Ability to apply the knowledge in order to select and use the tool material in jig and fixture design.
- Ability to analyse and evaluate the principles of design economy in jig and fixture design.

4. Ability to design and propose the suitable jig and fixture to accomplish specific tasks.

PDT 211/4 ADVANCED MACHINING TECHNOLOGY I

Course Synopsis

This course elaborates the principles and concepts of computer numerical control (CNC) used in the modern manufacturing facilities. The student will develop an increased understanding of CNC machine set-up, machine operation, tooling, and programming principles. G & M code programming language will

be utilized to write part programs. Although there is a variety of machines and CNC controllers, this course focuses on the G & M codes that remain common from one machine to another.

Course Outcomes

- Ability to explain the concepts of NC programming and NC machining processes.
- Ability to prepare G and M code programs and documentation for the manufacturing steps required to produce machined parts on CNC machine tools.
- Ability to perform and evaluate CNC machining operations that include workpiece zero setting, tool setting, program editing and finally machining.
- 4. Ability to design automated system using Programmable Logic Controller (PLC).
- Ability to justify the recent challenges in CNC and machine tool programming.

PDT212/3 GEOMETRIC, DIMENSIONING AND TOLERANCING

Course Synopsis

This course focuses on the theory and concept to Geometric Dimensioning and Tolerencing (GD&T). Geometric Dimensioning and Tolerencing (GD&T) is a graphic language, that the learner can understand and use it in practical applications in industry. This course develops students' knowledge and skills on the basis of Geometric Dimensioning and Tolerencing (GD&T) and its application in engineering. All this knowledge and skills will help student to apply its in engineering field to fulfill industry demand.

Course Outcomes

- Ability to justify, and explain theory and concepts of Geometric Dimensioning and Tolerancing, dimensioning fundamentals.
- Ability to analyze the geometric characteristic and datum of Geometric Dimensioning and Tolerancing (GD&T).
- 3. Ability to evaluate the concept of tolerance and fits and strategize.

PDT222/3 METALLURGY

Course Synopsis

This course is designed to provide an understanding about basic principles of metallurgy. it will covered basic theory of thermodynamics, extraction of the metals from the raw, properties of the metal and current technolgy involved in metal fabrication.

Course Outcomes

- Ability to define and apply thermodynamics concept and rate processes
- Ability to analyze the microstructure and properties of alloy and the industrial application
- 3. Ability to discuss and justify the concept of corrosion of metals
- Ability to evaluate the basic principle in metal extraction from its ore by hydrometallurgy, electrometallurgy and pyrometallurgy

PDT309/3 MANUFACTURING ECONOMICS

Course Synopsis

This course addresses a systematic evaluation of proposed solution to engineering problems. It evaluates the monetory consequences of products, projects and processes that engineers design. The course introduces students to fundamental economics consideration and costs involve in decision making for a production or a project which will be economically acceptable and demonstrate a positive balance of long term benefits over long term costs. The students learn about fundamental cost concepts and costs involve in a production process. Then, money-time relationship (also called time value of money) and concept of equivalence expose students to the value of investment bu estimating future costs or revenues. The application of money-time

relationship in comparing different alternatives help to choose best solution before investing.

Course Outcomes

- Explain engineering economy and cost accounting concept and their role in decision makina
- Apply engineering and cost accounting methods in solving cash flow problems
- 3. Provide suitable solution for discrete cash flow problems and analyze money-time relationship.
- 4. Compare and get effective investment return.

PDT311/4 ADVANCED MACHINING TECHNOLOGY II

Course Synopsis

This course is the introduction for EDM technology (Electrical Discharge Machining) which is used in industries nowadays. It includes topics about introduction to EDM technology, wire-cut and Ram (diesinker) machining. Students are involved with system and process for both type of machining. Besides that, students are also exposed to other types of EDM process.

Course Outcomes

- Ability to explain and response to the fundamental and concept of electrical discharge machining (EDM).
- Ability to explain, illustrates and apply the concept of EDM which include the wire-cut and Ram EDM machining
- Ability to explain, illustrates and applies the system and process of wire-cut and Ram EDM machining.

PDT 312/3 COMPUTER AIDED MANUFACTURING

Course Synopsis

This course introduces principles and application of CAD/CAM system. This course enables student to understand the theory, concept, and application of CAD/CAM in an industry. Students will be exposed to CAD software to illustrate parts and then using CAM software to convert CAD file into numerical control (NC) codes.

Course Outcomes

- Ability to define, describe and explain on CAD/CAM systems and its application in product development process.
- Ability to apply and demonstrate CAD/CAM system as part of product development process.

- 3. Ability to apply, illustrate and construct CAD drawing & modeling for CAM system.
- Ability to generate, practice and transfer part programming for machining process based on CAD file.
- 5. Ability to perform in group/ teams to construct part programming for Computer Numerical Control machining.
- 6. Ability to perform in group/ teams to modify and edit part programming in CNC machining controller.

PDT310/3 QUALITY SYSTEM

Course Synopsis

This course is offered to introduce quality assurance which refers to all systematic and planned activities in quality systems that are proved to be sufficient enough to build up proper confidence in meeting quality requirements whether for products or services which meet or exceed customer expectations. In this course student will learn the quality management as the key for quality assurance achievement. This course comprise of the quality management's philosophy and concepts and application of quality tools and techniques in order to achieve quality assurance. Bu understanding the entire contents of this course, students will be able to interpret the standard for quality assurance and quality management systems, and able to develop. formulate, and organize their works or organization effectively.

Course Outcomes

- Ability to explain the philosophy and concepts of quality management and quality assurance.
- 2. Ability to analyze and apply the best practice of quality assurance system's to determine their adequacy and effectiveness.

Ability to judge and predict the direction of the product, service, or organization, based on the application of quality assurance and management systems.

PDT 313/4 FINAL YEAR PROJECT

Course Synopsis

A projects based course that exposes students to solve, analyze, design and research engineering problems in the field of manufacturing engineering, machining or product design.

Course Outcomes

- 1. Ability to apply and integrate theories and lab, known how that has been learnt to solve engineering problems.
- 2. Ability to produce either a new design or toimprove on an existing design.
- Ability to choose a suitable research methodology for the research project being undertaken.
- 4. Ability to write. Present and defend the technical report (desertation) for the projects undertaken.

Bachelor of Mechanical Engineering Technology (Honours) (Agricultural Systems)

Programme Educational Objectives (PEO)

PEO 01

Graduates competent in the application of mathematics and sciences in engineering technology in managing agricultural production and natural resources.

PEO 02

Graduates capable of addressing issues of ethics, safety, professionalism, cultural diversity, globalization, environmental impact, and social and economic impact in their careers.

PFO 03

Graduates capable of managing technology and systems including capabilities to think creatively and innovatively solve problems and communicate effectively.

PEO 04

Graduates who can work collaboratively, have people skills and continually engaged in lifelong learning.

Programme Outcomes (PO)

PO 01

Apply knowledge of mathematics, science, engineering fundamentals and engineering specialization principles to defined and applied engineering procedures, processes, systems or methodologies;

PO 02

Solve broadly-defined engineering problems systematically to reach substantiated conclusions, using tools and techniques appropriate to their discipline or area of specialization;

PO 03

Design solutions for broadly-defined engineering technology problems, and to design systems, components or processes to meet specified needs with appropriate consideration for public health and safety, as well as cultural, societal, environmental and sustainability concerns;

PO 04

Plan and conduct experimental investigations of broadly-defined problems, using data from relevant sources;

PO 05

Select and apply appropriate techniques, resources and modern engineering tools, with an understanding of their limitations;

PO 06

Function effectively as individuals, and as members or leaders in diverse technical teams;

PO 07

Communicate effectively with the engineering community and society at large;

PO 08

Demonstrate an awareness of and consideration for societal, health, safety, legal and cultural issues and their consequent responsibilities;

PO 09

Demonstrate an understanding of professional ethics, responsibilities and norms of engineering technology practices;

PO 10

Demonstrate an understanding of the impact of engineering practices, taking into account the need for sustainable development;

PO 11

Demonstrate an awareness of management, business practices and entrepreneurship; and

PO 12

Recognize the need for professional development and to engage in independent and lifelong learning.

Course Syllabus

PDT176/2 COMPUTER AIDED DRAFTING

Course Synopsis

This course introduces the application of drafting and modelling techniques commonly used in mechanical and civil designs computer graphics, 2-D and 3-D geometry related to drafting and design of mechanical and structural components and/or systems. The primary software used in this course is AUTODESK AutoCAD.

Course Outcomes

- Ability to apply basic drafting skills using computer aided drafting software.
- Ability to construct and interpret drawings in orthographic projection.
- Ability to construct a working drawing for an engineering product or device using a CAD sustem.
- Ability to accurately interpret and construct standard engineering drawings and schematic diagram.

PDT177/2 APPLIED CHEMISTRY

Course Synopsis

The course covers pure chemistry (chemical elements, atoms and molecules), water and the fitness of environment, carbon and functional groups, structure and function of macromolecules and analytical chemistry (stoichiometric calculations and chemical equilibrium which comprises of acid base equilibrium, acid base titrations and reactions, and precipitation titrations).

Course Outcomes

 Ability to apply the concepts and principles of general chemistry and analytical chemistry.

- 2. Ability to solve the problems in chemical reactions and calculations.
- Ability to recognise and analyze the data from various types of chemistry of life and problem solving in analytical chemistry.

PDT178/2 APPLIED BIOLOGY

Course Synopsis

This course introduces the general concepts of biology as related to agricultural technology, the molecular and cellular aspects of living things, plant and animal

structure and function diversity, principles of classification and ecological relationships in organisms, and the role of genetics in organism variation and adaptation.

Course Outcomes

- Ability to illustrate important traits of living organisms with reference to: evolution, classification and ecology
- 2. Ability to interpret growth of living organisms with reference to physiology and genetics.

References

- Campbell, N.A, Reece, J.B. 2008. Biology, 9th ed. Pearson Cummings, San Francisco

PDT179/3 AGRICULTURAL ECONOMICS

Course Synopsis

The course introduces to the study of economic principles with respect to supply-demand, finance and marketing of agricultural products related to food and fiber production with special reference to Malaysian conditions and policies.

Course Outcomes

- Ability to apply economic development, with specific context of Malaysia's economy and the agricultur of sector.
- Ability to analyze consumer behavior, market supplydemand equilibrium, and elasticitu.
- Ability to analyze business behavior and market supplydemand equilibrium.
- Ability to apply agriculture macroeconomics with respect to international agricultural trades, exchange rates and policies.

PDT180/3 ENGINEERING SCIENCE

Course Synopsis

The course covers foundations of quantity and units of measurement, vectors, particle dynamics, work, power and momentum. Additional coverage includes forces on objects and introduction to electrical circuit.

Course Outcomes

- Ability to analyze problems related to units of measurements, and scalar and vector quantities.
- Ability to analyze particles in motion, energy, work, power, and momentum.

- 3. Ability to analyze forces acting on objects.
- 4. Ability to analyze basic electrical circuitry.

References

- 5. Huges, E. (2005). Electrical and Electronics Technology, 9th Ed., Prentice Hall, New York, NY.

PDT181/3 ENGINEERING MECHANICS

Course Synopsis

This course covers vector representation of forces, moments and static equilibrium of particles, rigid bodies, and engineering structures, analysis of external and internal forces in structures via the methods of free-body diagrams and properties of cross-sectional areas,

kinematics and kinetics of system of particles and of rigid bodies in two and three-dimensional spaces covering force and acceleration, linear and angular momentum, and energy conservation.

Course Outcomes

- Ability to interpret the basic principles of statics and dynamics on mechanism and bodies.
- 2. Ability to apply the basic principles of statics and dynamics on mechanism and bodies.
- 3. Ability to solve problem related forces, loads, displacement, velocity and acceleration of a body or mechanism.

PDT182/3 ELECTRONICS APPLICATION IN AGRICULTURE

Course Synopsis

This course introduces basic electrical circuit theory and analogue electronics, basic DC and AC circuits and fundamental of electronic components such as operational amplifiers and semiconductor diodes.

Course Outcomes

- Ability to demonstrate application of the key principles of DC circuit theory including Kirchhoff's laws of current and voltage, and rules for current and voltage division.
- Ability to apply ideal and nonideal operational amplifier circuits.
- 3. Ability to analyze simple AC series and parallel circuits using phasors and complex numbers.

PDT183/2 AGRICULTURAL MECHANICS AND WORKSHOP TECHNOLOGY

Course Synopsis

This laboratory course is designed to provide students with introductory level experiences in selected major areas of agricultural mechanics technology which may include small engine maintenance and repair, metal fabrication, concrete construction, building construction, plumbing, electrical wiring, maintenance of agricultural machinery, equipment and tractors.

Course outcomes

1. Ability to follow safety procedures in the agricultural mechanics shop.

- 2. Ability to sketch drawings of simple projects, layout projects from drawings, creates a bill of materials for organizing agricultural mechanics shop projects.
- 3. Ability to identify tools and materials common to agricultural mechanics shop.
- Ability to demonstrate basic shop skills common to agricultural mechanics shop through the construction of an agricultural mechanics project.

 3rd Edition. Pearson/Prentice Hall Interstate.

PDT184/4 AGRICULTURAL PRODUCTION SYSTEMS

Course Synopsis

The course covers the various facets of agricultural production systems and practices, dynamism within the soil-plant-atmosphere continuum involving living organisms related to crops and fauna, components in agricultural production systems and good agricultural practices and sustainability approaches.

Course Outcomes

- Ability to define and interpret the basic principles and processes involved in agricultural production systems.
- 2. Ability to solve problems related to aspects in agricultural production systems.
- Ability to choose systems related to good agricultural practices and sustainable farming

PDT276/3 MECHANICS OF MATERIAL

Course Synopsis

This course covers analysis of stresses due to various loading conditions, stresses and strains at a point, stress-strain relationships, theories of failure, energy methods, shear center, unsymmetrical bending, curved beams, torsion, and buckling problems.

Course Outcomes

- Ability to analyze the basic concepts of mechanics of materials in design consideration.
- 2. Ability to analyze stress and strain by using Mohr's Circle and Hooke's Law plane stress in pressure vessels and beams.

- 3. Ability to use the superposition method or moments-area method to analyze the deflections of beams.
- 4. Ability to analyze buckling and stability for Columns and in designing columns.

PDT277/3 APPLIED THERMODYNAMICS

Course Synopsis

Thermodynamics is the study of heat related to matter in motion. The First Law of Thermodynamics involves the conversion of energy from one form to another while the Second Law determines the direction of heat flow, and the availability of energy to do work. This course, covers the

terminology, principles, theory, and practical application of the First and Second Law of engineering thermodynamics.

Course Outcomes

- Ability to discuss basic concept of thermodynamic and energy transformation in the system.
- Ability to apply the concepts of thermodynamics systems such as processes, cycles and working fluid in engineering field.
- Ability to solve thermodynamics system performance problem analytically.
- Ability to analyze thermodynamics system such as steam power cycles and refrigeration cycles.

- Cengel, Y.A and Boles, M.A. 2008. Thermodynamics: An Engineering Approach", 6th Edition, McGraw-Hill, NY
- Nag, P.K, 2010. Basic and Applied Thermodynamics 2nd Edition, McGraw Hill, NY
- 3. Robert, T. B. 2010.Modern Engineering Thermodynamics. Elsevier Inc, NY

- 5. Srivastava, R. C 2007. Thermodynamics, 3rd Edition, Prentice Hall. London

PDT278/2 GEODETICS ENGINEERING

Course Synopsis

This course emphasizes on knowledge and skills using surveying equipments such as leveling, theodolite and GPS. Topics discussed include are traversing, tacheometry, mapping, setting out, triangulation, geometric design, vertical and horizontal alignment, and volume of earthwork.

Course Outcomes

- Ability to apply concepts and principles of geodetic surveying.
- 2. Ability to perform surveying tasks and procedures.
- 3. Ability to analyze data from various types of geodetics surveying.

References

- Uren, J and Price, W.F., 2006. Surveying for engineers 4th Edition, Palgrave Macmillan, McMillan, London.

 F. 2006, Surveying For
 Construction, 5th Ed., McGraw-Hill, London.

PDT279/4 PRINCIPLES OF AGRONOMY

Course Synopsis

A foundation course in agronomy applying crop, soil, and environmental sciences in understanding agricultural systems. Topics include crop morphology and classification, soils and soil water management, mineral nutrition of crops, pest management, plant breeding, seed and grain quality and sustainable aspects of crop production.

Course Outcomes

- Ability to relate the science and principles of agricultural crop production systems and the importance of crops to our societu.
- Ability to apply crop production principles to crop production practices.
- 3. Ability to demonstrate sustainable practices for agricultural crops.

References

- Mullen R.E. 2008. Plant Production Systems, 5th edition, Kendall-Hunt Publishing, Dubuque, Iowa.

PDT280/2 FUNDAMENTALS OF AGRIBUSINESS ACCOUNTING AND FINANCE

Course Synopsis

This course covers fundamentals of the double-entry accounting cycle as it relates to partnerships and sole proprietorships operating in the agricultural sector including the use of automated accounting software the application of an agribusiness firm.

Course Outcomes

- 1. Ability to apply transactions into debit and credit parts.
- 2. Ability to apply accounts as assets, liabilities, or owner's equity.
- Ability to prepare and analyze a balance sheet, an income statement, and statement of owner's equity.

References

- 1. Silva, U.H. and Judy, U.H. 2009. Fundamentals of Agribusiness Accounting, Rex Bookstore Inc, Philippines.

- 5. Bamber, L.S. and Harrison, W.T. 2009. Managerial Accounting, Prentice Hall, New York, NY.

PDT281/3 INSTRUMENTATIONS AND CONTROL

Course Synopsis

The course covers the general concept of instrumentation, various measuring devices, manipulation, transmission, and recording of data, measurement standards, data analysis, calibration methods and software simulation to design and solve problems in measurement and automation systems.

Course Outcomes

- Ability to differentiate main components in instrumentation, measurement, their integration and working principle of various measurement devices.
- Ability to differentiate roles and features of appropriate instruments for various agricultural technology and applications.
- Ability to solve connectivity and interfacing of different instrumentation

References

 David Alciatore and Michael B. Hisband. 2011. Introduction to Mechatronics & Measurement Systems 4th edition. McGraw-Hill Publishing.

PDT282/3 APPLIED FLUID MECHANICS

Course Synopsis

This course emphasizes fundamental concepts and problem-solving techniques in fluid properties, static and kinematics, control volume analysis, momentum analysis of flow system, dimensional analysis, internal flows (pipe flows), differential analysis, and external flows (lift and drag).

Course Outcomes

 Ability to analyze the essential parameters describing a fluid system and common devices used in measuring pressure and flow rates and turbo machineries.

- Ability to analyze pressures, forces, and energy in fluid systems.
- Ability to calculate pressure, forces and flow rates in dynamic fluid system.

References

- Cengel, Y. A. Cimbala, J. M. 2010. Fluid Mechanics: Fundamental and Applications, 2nd edition in SI units. McGraw-Hill, New York.

PDT283/2 AGRIBUSINESS MANAGEMENT

Course Synopsis

As farming becomes more complex and global, and that the economic pressure on farming increases, future farm managers need to be equipped with knowledge in management and business strategies. This course covers

strategy, marketing, financial, operations quality, risks, human resources, and organizational management.

Course Outcomes

- Ability to apply various management functions to agribusiness entity.
- 2. Ability to analyze business process improvement using quality tools.
- 3. Ability to analyze time-value of moneu.

References

- Kent, D.O. 2008. Farm Management: Principles and Strategies, Iowa State Press, Ames, IA.

PDT284/2 AGRO-ECOSYSTEMS AND SUSTAINABILITY

Course Synopsis

This course discusses important components of sustainability for agrosystems which can be optimized through suitable application of engineering principles to reinforce the conventional wisdom of agrosystems production. Important engineering approaches invoking current practices and design are covered.

Course Outcomes

- Ability to distinguish agrosystems practices and sustainability indicators which include soil, water, biomass and waste.
- Ability to apply and formulate mathematical model for sustainable agrosystems.
- Ability to design components and processes of sustainable agrosystems.

References

 Lynch, D. R.2009. Sustainable natural resource management for scientists and engineers, Cambridge University Press, New York.

PDT376/3 FARM POWER AND MACHINERY

Course Synopsis

The course covers the basic of machines and the importance of mechanization for various farm operations, selection of appropriate machines and its maintenance and the management of farm machineries.

Course Outcomes

- Ability to apply the basic principles, construction and working of farm machinery for different crops and livestocks.
- Ability to select and assemble appropriate machinery, use, repair and maintenance.

3. Ability to manage agro machinery service centre.

References

- Brian, B. 2005. Farm Machinery, Fifth Edition, Old Pond Publishing Ltd,

PDT377/3 APPLIED HEAT AND MASS TRANSFER

Course Synopsis

The course covers the application of various energy resources to generate power useful for processing biological materials and focuses on the technology, production process and engineering of renewable sources of energy which includes solar, wind, wave, and energy from biomass.

Course Outcomes

- Ability to discuss mechanisms and characteristics of heat and mass transfer.
- Ability to apply mathematical models of various heat transfer mechanisms.
- 3. Ability to analyze different types of heat exchangers, heat transfer coefficient for heat exchanger and energy analysis on heat exchanger.
- Ability to analyze and calculate physical mechanism of mass transfer, the rate of mass diffusion, and simultaneous heat and mass transfer.

PDT378/2 PRECISION AGRICULTURE TECHNOLOGY

Course Synopsis

This course covers the essential aspects of Precision Agriculture (PA) concepts including soil/landscape and crop spatial variability, GIS, DEM, GPS, sensors, variable rate machinery, PA software, remote sensing; geostatistics, sampling, experimental designs, precision integrated crop management, data acquisition, processing, and management and socio-economical and e-marketing aspects.

Course Outcomes

- 1. Ability to illustrate the concept, component and application of precision farming in agriculture.
- Ability to apply spatial information and precision agriculture technologies to improve soil and crop management, environmental and socio-economical aspects.
- Ability to analyze georeferenced data using spatial information technologies.

PDT379/3 WATER RESOURCES MANAGEMENT

Course Synopsis

This course introduces principles of surface and ground water hydrology and their applications in water resources engineering, descriptive and quantitative applications of the hydrologic cycle, weather system, precipitation, evaporation, transpiration, surface and subsurface waters, stream flow hydrographs and flood routing. The course also covers water resources management principles, regulatory issues, management of water resources

for sustainable development, tools for water resources management; economic analysis, water supply, water demand, climate change and water resources management, extremes (floods and droughts), water management in the Malaysia practices and use of computerbased tools in solving water resources management problems.

Course Outcomes

- Ability to analyze principle of water resources, planning and management.
- Ability to infer the components of hydrologic cycle and the affect to human daily lives.
- Ability to analyze hydrologic data for engineering design and management.

- Chin, D.A., 2006. Waterresources Engineering, Prentice Hall, Upper Saddle River, NJ,

- Mays, L.W., 2005. Water Resources Engineering, John Wiley. United State of America.

PDT380/3 AUTOMATIONS IN AGRICULTURAL SYSTEMS

Course Synopsis

This course covers advanced study on instrumentation with emphasis on selection of measurement techniques and transducers to sense physical properties of biological materials with application to agricultural, food processing industries and biological system. Application of biosensors in agriculture, design of automation system and machine/gentry for agricultural systems.

Course Outcomes

- Ability to identify and apply the concepts of automated machines and equipment and to agricultural related problems.
- Ability to operate with existing biosensor systems and transducers, as well as to design new sensors.
- Ability to identify and assemble industrial sensors in farming system

PDT381/4 FINAL YEAR PROJECT 1

Course Synopsis

A short-term research project in engineering operations for producing agricultural systems and technologies including research writing and presentation of the research outcome in the form of thesis and seminar.

Course Outcomes

- 1. Ability to apply and integrate theory and practical to solve the engineering problems.
- Ability to develop suitable research methodology for the project.
- Ability to present and defend effectively project proposal to selected audience.

 Buku Panduan Projek Tahun Akhir UniMAP

PDT382/3 CONTROLLED ENVIRONMENT AGRICULTURE

Course Synopsis

The course covers design of controlled environment agricultural structures which include thermal and environmental engineering analyses appropriate for controlled environment agricultural production facilities for plants and animals. Major topics include psychrometrics, heat transfer, ventilation and heating, air distribution within buildings, and control systems.

Course Outcomes

 Ability to analyze heat and mass transfer of plants and animals structures.

- Ability to analyze natural and forced cooling and heating for plants and animals structures.
- Ability to analyze mechanical and natural ventilation for plants and animal structures.

PDT383/3 RENEWABLE ENERGY

Course Synopsis

The course covers the application of various energy resources to generate power useful for

processing biological materials and focuses on the technology, production process and engineering of renewable sources of energy which includes solar, wind, wave, and energy from biomass.

Course Outcomes

- Ability to explain technologies used in generating mechanical and electrical power for biosystems
- Ability to demonstrate the concepts of renewable energy conversion suitable for production and processing of biological materials.
- Ability to evaluate the efficiency and performance of different renewable energy generating systems.

PDT384/3 FOOD TECHNOLOGY

Course Synopsis

This course covers multidisciplinary field of food technology and related industries. Topics covered include food science, food ingredients, nutrition, nutritional information, food spoilage, food production systems, preservation processes, freezing, drying, direct-heating, radiation, extrusion and packaging, freezing, texturization, mechanical separation and food biotechnology.

Course Outcomes

- 1. Ability to differentiate the principles of food technology.
- 2. Ability to interpret ingredients and nutrition in food.
- 3. Ability to solve problems involved in food production.

- Meireles, A. 2009. Extracting bioactive compounds for food products. CRC Press, NY

PDT385/3 BIOMATERIAL ENGINEERING (ELECTIVE)

Course Synopsis

This course covers structure and properties of biomaterial and related solids, physical and chemical bases for properties exhibited by materials, polymeric biomaterials, metallic biomaterials. ceramic biomaterials and composite materials. Material properties including mechanical, electrical, magnetic and thermal behaviour, applications of biomaterials in agricultural systems, relationship between physical and chemical structure of materials and biological system response, selection, fabrication and modification of materials for specific applications. biomaterials processing and degradation, implant requirements. host-implants reactions including wound healing response and inflammatory response. physiological and biomechanical basis for soft-tissue implants,

design of modified biomaterials, bulk and surface characterization of materials and regulatory and ethical concerns dealing with the implementation and commercialisation of biomaterials.

Course Outcomes

- Ability to analyze the biomaterial physical, chemical and biological properties.
- 2. Ability to design the processing system for a biomaterial.
- Ability to recommend the commercialization potential of biomaterial

PDT386/3 INTEGRATED AGROSYSTEMS (ELECTIVE)

Course Synopsis

An advanced course integrating principles of crop production, animal husbandry, aquaculture, soils and environmental sciences in agricultural systems. Topics include concept and principles of biologically integrated farms, components, interactions, techniques and energy flows of integrated farms.

Course Outcomes

- Ability to compare and contrast between integrated farming and conventional farming.
- 2. Ability to categorize the components, interactions and energy flows in an integrated farming system.
 - Ability to demonstrate sustainable practices of integrated farming systems.

- 1. Panda, S.C. 2006. Crop Management and Integrated Farming. Agrobios.

PDT476/6 FINAL YEAR PROJECT 2

Course Synopsis

A short-term research project in engineering operations for producing agricultural systems and technologies, including research writing and presentation of the research outcome in the form of thesis and seminar.

Course Outcomes

- Ability to apply and integrate theory and practical to solve the engineering problem.
- Ability to develop suitable research methodology for the project.
- 3. Ability to present and defend effectively project proposal to selected audience.
- Ability to evaluate the commercialization potential for proposed project

References

PDT477/3 POST-HARVEST TECHNOLOGY

Course Synopsis

This course introduces the overview of post-harvest handling technology of selected commodities that emphasizes on the basic of preharvest, harvest factors and post harvest handling technology, post-harvest treatment and processing, packaging operation and appropriate equipment, post harvest pest management, quality assurance and socio-economics of post harvest.

Course Outcomes

- Ability to analyze the physical properties of agricultural products in order to apply the appropriate post-harvest handling technology.
- 2. Ability to distinguish the packaging operation and propose the appropriate equipment for handling this operation.
- 3. Ability to differentiate the preharvest and harvest factors that affects on postharvest quality.

PDT478/3 AGRICULTURAL WASTE MANAGEMENT AND UTILIZATION ENGINEERING

Course Synopsis

This course covers the agricultural sources of pollution (pesticides, fertilizer, on-farm food processing wastes and animal manure) and their effect on the environment. Physical, chemical and biological properties of agricultural waste

materials, treatment processes of agricultural wastes, methods of land application of agricultural wastes, and technologies for utilization of agricultural wastes for biogas production and animal feed.

Course Outcomes

- Ability to recommend suitable physical, chemical and/ or biological treatment of industrial and agricultural organic wastes.
- Ability to design systems for the collection, handling, treatment and utilization of wastes.
- 3. Ability to propose suitable utilization technique for agricultural waste and wastewater to sustain an environmental

PDT479/3 BIO-RENEWABLE SYSTEMS (ELECTIVE)

Course Synopsis

An in-depth introduction to biorenewable concepts in relation to converting bio-renewable resources into bio-energy, bio-based products, feedstock production, economics, logistics and marketing of products and co-products.

Course Outcomes

- I. Ability to differentiate biorenewable resources.
- Ability to compare and contrast the products, coproducts, production processes, economics and marketing of bio-renewable resources.
- Ability to analyze conversion of bio-renewable resources into bio-energy and bio-based products.

PDT480/3 FOOD PROCESSING ENGINEERING (ELECTIVE)

Course Synopsis

This course covers multidisciplinary field of applied physical sciences that combines science and engineering education for food and related industries. Topics covered include introduction to food engineering, fluid flow theory, heating and cooling processes for foods, thermal processes, food

freezing and freeze concentration, evaporation and freeze concentration, food dehydration, filtration, sedimentation and centrifugation, membrane process, extrusion and cleaning and sanitation.

Course Outcomes

- 1. Ability to categorize the appropriate physical characteristic according to food processing.
- Ability to differentiate the principles of food engineering operations.
- Ability to analyze the problem that involved in food engineering operations and propose the solutions.

References

- Singh, R. P. Heldman, D.R. 2009. Introduction to Food Engineering. 4th ed. Academic Press. Elsevier.

PDT481/3 ADVANCES IN AGROTECHNOLOGY (ELECTIVE)

Course Synopsis

This course covers inventions, achievements, acceptance and challenges in the use of modern agricultural technologies to increase yield and quality of agricultural produce with emphasis on the application, transfer and management of technologies that regulate crop and soil quality in relation to social, technical and environmental conditions.

Course Outcomes

- Ability to apply modern technologies in the production, handling and processing of agricultural products.
- 2. Ability to distinguish modern agricultural technologies that would improve quantity and quality of agricultural products.
- 3. Ability to experiment with new technologies and alternative solutions in agricultural production.

References

PDT482/3 FOOD AND HERBAL CROP PRODUCTION TECHNOLOGY (ELECTIVE)

Course Synopsis

This course covers crop production practices of important food crops (paddy, maize/corn, sweet potato and cassava) in meeting the energy requirements and ensuring food security and food safety as well as selected herbal crops with pharmaceutical/nutraceutical/medicinal properties

Course Outcomes

- Ability to distinguish appropriate crop production technologu.
- Ability to apply good agricultural practices in food and herbal crop production.

3. Ability to select new technology to increase yield.

Bachelor of Mechanical Engineering Technology (Honours) (Product Development) - RY57

Programme Objectives [PEO]

PEO 01

To produce competent Engineering Technologists who are able to apply principles of science, engineering and modern technology in solving current and future problems related to Product Development Engineering technology.

PEO 02

To produce Engineering Technologists in product development field who perform work and duty ethically with high moral values and responsibility to God, nation and societies.

PEO 03

To produce creative and innovative Engineering Technologist in research and development in fulfilling the nation's requirements.

PEO 04

To produce Engineering Technologists who are able to communicate effectively with good leadership as well as able to function in teamwork environment.

PEO 05

To produce Engineering Technologists that shows enthusiasm in engaging long-life learning through continuity of learning, technical practices and professional development.

Programme Outcomes [PO]

PO1

Apply knowledge of mathematics, science, engineering fundamentals and engineering specialization principles to define and apply engineering procedures, processes, systems or methodologies.

PO₂

Solve broadly-defined engineering problems systematically to reach substantiated conclusions, using tools and techniques appropriate to their discipline or area of specialization;

PO₃

Design solutions for broadly-defined engineering technology problems, and to design systems, components or processes to meet specified needs with appropriate consideration for public health and safety, as well as cultural, societal, environmental and sustainability concerns;

P04

Plan and conduct experimental investigations of broadly-defined problems, using data from relevant sources;

PO5

Select and apply appropriate techniques, resources and modern engineering tools, with an understanding of their limitations;

PO6

Function effectively as individuals, and as members or leaders in diverse technical teams;

PO7

Communicate effectively with the engineering community and society at large;

PO8

Demonstrate an awareness of and consideration for societal, health, safety, legal and cultural issues and their consequent responsibilities;

PO9

Demonstrate an understanding of professional ethics, responsibilities and norms of engineering technology practices;

PO10

Demonstrate an understanding of the impact of engineering practices, taking into account the need for sustainable development;

PO11

Demonstrate an awareness of management, business practices and entrepreneurship;

PO12

Recognize the need for professional development and to engage in independent and lifelong learning.

PDT101/3 STATICS AND DYNAMICS

Course Synopsis

This course comprises two parts, namely; statics and dynamics. In statics, the basic principles of engineering mechanics such as forces, moments and friction are introduced. Students are required to apply this basic knowledge in analysing the equilibrium of rigid bodies, as well as the stability of a structure. The subjects of dunamics cover the concept of kinematics and kinetics. Kinematics treats the geometric aspects of the motion, whereas kinetics analuses the forces that cause the motion. Analyses in relation to kinetic problems are solved using acceleration method, principle of work and energy, and principle of impulse and momentum.

Course Outcomes

- Ability to apply and analyse the basic principles of physics related to static such as force, moment, Newton's First, second and Third Law, trusses, frame and machine.
- 2. Ability to apply and analyse the structures and frameworks problems by constructing, sketching and/or drawing free body diagram in ensuring static equilibrium.

- Ability to apply and analyse the kinematics and kinetics for particles and systems of particles.
- Ability to apply and analyse the planar kinematics and kinetics of a rigid body.

PDT106/3 ENGINEERING GRAPHICS

Course Synopsis

This course provides the skills to students the basics of Engineering Drawing, Computer Aided Drafting (CAD) and their engineering applications. The course covers the detail of Engineering Drawing for beginners followed with projection sustems, oblique and isometric sketches. The course also introduced the Computer Aided Drafting using dedicated software, AUTOCAD, which focuses on product design in 2D and 3D environment. Fundamental knowledge in dimensioning and geometrical tolerance (GDT) enhances student's ability in interpreting and assessing information from basic raw data of an engineering drawing.

Course Outcomes

- To apply the basic drafting, sketching engineering components, and common term used in engineering drawing.
- 2. To apply orthographic, auxiliary view, cross section and isometric in engineering drawing.
- To apply geometric, dimensioning, and tolerancing (GDT) in engineering drawing.

4. To apply detail and assembly drawing in engineering drawing.

PDT133/2 WORKSHOP TECHNOLOGY

Course Synopsis

In this course, explanation about safety aspects in workshop will be covered, followed by fundamental measurement techniques, and use of measurement equipment such as Vernier Caliper, Chiseling, Sawing, etc. Students will be introduced to

fabrication, sheet metal forming, and welding processes which consists of introduction to basic knowledge of various cutting methods and hand tools, such as file, hacksaw, chisel, and etc.

The second part of the course introduces the fundamentals of measurement techniques' followed by milling, lathe and grinding operations which consist of introduction to basic knowledge of various cutting tools, parts of machines and their functions, machine operations, and numerous calculations involving the operations. Students will practice conventional machining process that it used in the industry to transform raw material to finished products. Practical work will help students gain effective understanding.

Course Outcomes

- Work in a group, communicate effectively; apply basic industrial safety regulation as well as emergency first aid techniques.
- 2. Ability to apply and understand engineering drawing and able to transfer for model/prototype fabrication
- 3. Define and operate the conventional machining.

PDT126/3 DESIGN FUNDAMENTAL

Course Synopsis

The subject introduces students to the theory and practice of art. In this course, the elements of art (line, color, shape/form, space, value, and texture) and the principles of art (balance, harmony, unity, emphasis, repetition, rhythm, contrast, and composition) are discussed and practiced through student individual or group projects. Students will be exposed to the topics about Nature of Design; Design Process

and Communication; Design
Techniques and Critiques. The most
important topic in this course is
visual language, which comprises of
exploration towards visual elements
and design principles. In addition,
students will be exposed and
experienced the aesthetics value
of an art work, through creating
graphical images or 3 dimensional
objects including presentations and
critique sessions.

Course Outcomes

- Ability to describe and apply design elements and principles in design projects and assignments.
- Ability to analyze aesthetic value of 2 dimensional artwork and 3 dimensional objects of the design output.
- Ability to recognize/realize the important of leadership and teamwork in producing projects or assignments for better output.

PDT127/3 DESIGN APPRECIATION

Course Synopsis

This course is designed to incorporate an understanding of the vast range of works of art. It is a chronological survey of major artwork, movements and monuments since the earliest

cave drawings. The first part of this course introduces students to the history and appreciation of art, including exploration of the elements and principles of the visual arts. Students will be introduced to the study and history of the visual arts with focus on the unique characteristics, representative artists and works: and common art forms and genres of various art historical periods. The second part of this course is the historical study to the progression of industrial design/product design professions and the important aspects of their involvement and contributions in product design. Finally, students will be introduced to the art of product styling and the important of product semantics in the process of creating a product.

- Ability to understand, identify and evaluate the issues and challenges of industrial technologies ethics.
- Ability to translate and explain the factor ofdesign history and revolution and the effects to the industrialization sector.
- Ability to discuss in group and evaluate the aspects of industrial revolution technology and the effects to the social and cultural.

PDT122/3 MATERIAL SCIENCE

Course Synopsis

This course introduces students to historical perspective of materials science and engineering fundamentals characteristics begin from understanding the atomic structures, atomic bonding in solids, crystal structures, mechanical and physical properties of materials. Students will then apply the understanding on properties of materials through phase diagram, transformations and heat treatment processing on ferrous and nonferrous alloys, polymer and advanced materials

Course Outcomes

- Ability to describe and explain the materials' atomic structures, bonding, crystal structure and imperfections.
- 2. Ability to explain and analyse the mechanical, physical properties of materials.
- Ability to explain and analyse the metal alloys microstructure, phase diagram and heat treatment processes.
- Ability to describe and explain machinability of ferrous and non-ferrous metal alloys, polymer materials and advanced materials...

PDT128/3 DESIGN VISUALIZATION

Course Synopsis

This course aims at addressing important issues in the visual design. The course will cover fundamental design concepts in a logical sequence which will provide students with good visual design. The most important topic in this course is visual language. which comprises of exploration towards visual elements and design principles. In addition, the student will learn about aesthetics value of an art work, such as graphical images and 3 dimensional objects. The student will undergo lecture series on related topics and experience some design projects included presentations and critique sessions.

- Ability to describe and apply design elements and principles in design projects and assignments.
- Ability to analyze aesthetic value of 2 dimensional artwork and 3 dimensional objects of the design output.
- Ability to recognize/realize the important of leadership and teamwork in producing projects or assignments for better output.

4. Ability to construct and produce 2 dimensional and 3 dimensional objects using various drawing and modeling techniques with appropriate tools and instruments.

PDT111/3 MANUFACTURING PROCESS

Course Synopsis

This course explores the manufacturing process which used in industry to convert raw material into finished product. This course is devided into five sections. First, the introduction to manufacturing technology will be given, followed by material selection in manufacturing and heat treatment process. Secondlu. the casting technology and various metal casting processes will be introduced including sand casting. investment casting, vacuum casting and other casting processes. Thirdly, overview of forming and shaping process will be given on rolling. forging, extrusion, drawing, sheetmetal forming, powder metallurgu, processing of ceramics, injection molding, and rapid prototyping process. Fourthly is about various joining process such as brazing. soldering, adhesive bonding, and mechanical fastening processes.

Course outcomes

 Ability to describe the concept & methodologies of manufacturing technology and fundamental of materials in manufacturing.

- 2. Ability to describe and analyze the concept & methodologies of solidification processes.
- Ability to analyze and evaluate the concept of forming and shaping processes.
- Ability to analyze and evaluate the concept & methodologies of joining and assembly technology.

PDT 131/2 COMPUTER AIDED INDUSTRIAL DESIGN I (CAID I)

Course Synopsis

This course focuses on giving exposure and skill to students about the basics of 3D modeling and its application in engineering field by using 3D Modeling software.

This course includes details on 3D modeling followed by producing 2D drawing, assembly drawing, exploded drawing, surface modeling, rendering and animation. All this skill will help student to produce technical drawing and virtual prototype or model. This skill is very demanding in industry.

Course Outcomes

- Design 3d model of components by using CAD software.
- 2. Apply and construct technical/2d drawing using CAD software.
- 3. Apply and construct assembly drawing and exploded drawing using CAD software.
- Apply and construct 3d animation and rendering for the components using CAD software

PDT 120/3 BASIC ELECTRICAL AND ELECTRONIC

Course Synopsis

This course provides basic knowledge of solving DC and AC electrical circuits. It also covers the fundamentals of electrical machines. The electronics section includes basic semi conductor diodes and transistors as well as the fundamentals of digital systems. At

the end of the semester students will be able to understand, analyze and apply basic electrical and electronics concept and principles.

Course Outcomes

- Ability to implement and analyze basic electrical circuits.
- 2. Ability to analyze single phase and three phase a.c circuits.
- 3. Ability to analyze the three phase induction motors.
- Ability to implement and analyze basic electronics circuits.

- Hambley, A. R., Electrical Engineering: Principles and Applications, 5th ed., Pearson (2011)

- 5. Floyd, T.L., *Digital* Fundamentals, 10th ed. Prentice Hall, Inc, 2009.

Course Synopsis

This subject introduce the role of industrial designer profession consist of explanation on the iob scope and knowledge and required skills. Furthermore, the subject exposes the students to the development of visual and creative thinking within the context of industrial design field, with special emphasis on the development of product form. Through lecture sessions and design assignments. students will be focused and exposed to the aesthetic, stuling and classification of products; concepts and design development method; producing product visualization/ presentation techniques including concept sketching and rendering techniques; model making and basic documentation skills inclusive of design presentation skills. The student will exposed and familiarized with the workshop environment and regulation and utilize and use those facilities for

Course Outcomes

model making.

- Ability to plan, perform and reflect on different phase in a design process.
- Ability to plan and embark on design research to support the design process.

- Ability to produce a product model and adapt with the workshop facilities and modeling materials.
- Ability to communicate an opinion, design idea, concept, and other information clearly and convinced the audience using language, gestures, and presentation materials.
- Ability to demonstrate and apply relevant basic engineering principles and material properties and manufacturing processes.

PDT 231/3 COMPUTER AIDED INDUSTRIAL DESIGN II (CAID II)

Course Synopsis

Once an Industrial Designer has completed the conceptual design stage of a project the details required for manufacture need to be resolved and prototypes made. It is at this stage that Computer Aided Design (CAD) is used. 3D CAD allows the details of the design to be resolved. Rapid prototypes can be made directly from the CAD data for design testing and verification. Modifications to the CAD data can be made quickly. Once the design is satisfactory, the 3D CAD models can then be used to generate photorealistic images and engineering drawings so that the new product can be manufactured.

- Apply three-dimensional transformations and viewing operations in computer-aided product design.
- 2. Apply curve, surface, and solid modelling in computer-aided product design.
- Understand product data management (PDM) technologies and the acquisition of PDM systems.

4. Understand and appreciate virtual engineering technologies and how they can be applied to product life-cycle design.

PDT 236/2 COMPUTER PROGRAMMING

Course Synopsis

This course introduces basic programming using high level language (C language). The main objective of this course is to prepare the students with the ability of problem solving with programming tools such as organization chart,

IPO chart, flowchart and pseudo code and then to implement them by developing C program.

Course Outcomes

- Ability to describe and apply design elements and principles in design projects and assignments.
- 2. Ability to analyze aesthetic value of 2 dimensional artwork and 3 dimensional objects of the design output.
- Ability to recognize/realize the important of leadership and teamwork in producing projects or assignments for better output.

PDT 240/3 APPLIED ERGONOMICS AND SAFETY

Course Synopsis

This course addresses ergonomics knowledge in product design. It explains the application of anthropometrics data in the design of products, equipment and tools. Students will learn about fundamental knowledge of ergonomics, its applications in design and basic assessment tools to analyze design problems. The course also exposes students to specific considerations, needs or requirement for special populations such as the elderly and the disabled in the design. It also looks into ergonomic hazards, safetu analysis & prevention, and the product safetu.

- Ability to define and explain the application and importance of ergonomics in design, and human capability and limitations.
- Ability to apply anthropometric data in product or workplace design, and perform analysis and evaluation.
- Ability to explain interaction design and usability issues, and apply usability principles and framework in product design

- Ability to address human needs through the use of ergonomics principles in product or workplace design.
- Ability to identify, analyze and evaluate design problems by using suitable ergonomics methods.
- 6. Ability to apply ergonomics knowledge in equipment and tools design.

PDT 230/3 DESIGN STUDIO I

Course Synopsis

This course aims to develop an understanding of customers and product marketability trough the subject theme of "Customers/

User Centered Design". Student will use appropriate engineering approaches and methods to analyze user needs and formulate solution to the design problems. Students are required to use and manipulate 3D CAD based software to construct product detailing and specifications and analyzing basic product reliability and performance. Additionally, student must use the software output to produce product illustrations and digital rendering techniques for product presentation.

Course Outcomes

- Ability to establish market segment and user requirements trough proper market study and ability to formulate that study into appropriate design solution.
- Ability to analyze the customer's requirement and formulate those requirements into product solution based on engineering principles for better marketability.
- Ability to use and manipulate
 3D software to construct and analyze product solution.
- Ability to create digital product illustrations and technical GDT (Geometric Dimensioning and Tolerance) drawing which support student's verbal presentation.

PDT 232/3 PRODUCT DATA MANAGEMENT (PDM)

Course Synopsis

This lesson provides an engaging context to introduce students to the advance processes of computer aided design and manufacture (CAD/CAM). Students analyze the reasons behind using CAD/CAM to develop selected products concept before identifying the advantages and disadvantages of its use. Students are given an opportunity

to practice their advance CAD skills by responding to a design concept. The lesson is supported by instructional worksheets, and demonstrates the importance of the use of advance CAD/CAM tools and equipments in the process of realizations of a design or product concepts.

Course Outcomes

- Be able to evaluate the success of a product concept against a design brief and identify areas for improvement.
- Ability to analyse the different characteristics of products designed and manufactured using computers and those manufactured by hand.
- Have a good understanding of how to accomplish a design brief using advance CAD/ CAM and able to analyse the limitations.
- Ability to perform diverse roles as designers and consequently their responsibility in order to fulfil product or design requirements.
- Ability to evaluate the main design considerations and the advantages of using CAD/CAM in translating and producing the finest products or equipment with the highest quality.

PDT 341/3 INDUSTRIAL DIALOGUE

Course Synopsis

This lesson provides up to date knowledge and facts in current design issues from seminars type sessions and lecture by invited experts in design related discipline. Students have to produce a report referring each discussed issue throughout seminars session. Students have to produce a comprehensive report with a verbal presentation at the end of the semester on selected topics given by course coordinator.

Course Outcomes

- Ability to analyse and recognize design issues through direct interaction between experts in different disciplines related to design field.
- Ability to construct opinions and able to criticize issues discussed in seminar sessions presented by experts.
- Ability to formulate and present extensive and comprehensive report in identified design issue and able to present it professionally in in-house seminar session.

- Dialogue Mapping: Building Shared Understanding of Wicked Problems by E. Jeffrey Conklin (Paperback - Nov 18, 2005)

PDT 330/3 DESIGN STUDIO II

Course Synopsis

The student will expose and gain knowledge on the subject of design affordance and semantic throughout the course. Study and analysis about user interaction in relation to the design concept is the most important subject to appreciate by the student. Furthermore, sustainable design and manufacturing is the second topic to be discussed in this course. The course will enhance student designing skill by focusing the engineering study on materials and manufacturing aspects which implements into design projects. The design should be electrical or electronic products which involve the use of instrumentation and control. Student will develop an understanding of Failure Mode and Effects Analysis (FMEA), a risk assessment technique for sustematically identifying potential failures in a system or a process throughout the product life cycle

Course Outcomes

- Ability to apply and formulate design affordance and semantic aspects on a product concept for better user interaction
- 2. Ability to respond regarding sustainable design issues and use the "Quality Function Deployment" (QFD) method in the design process.
- Ability to analyze and decide material properties and the manufacturing processes to produce/manufacture the design concept.
- 4. Ability to design and formulate a product based on product performance analysis using "Failure Modes Effect Analysis" (FMEA) factors.

PDT 343/3 ECONOMIC PRINCIPLES

Course Synopsis

This is an introduction to cost and management accounting. The course is designed to provide an understanding of the main elements which determine the cost of a product. The course also focuses on the application of fundamental costing methods and techniques and covers some aspects of managerial accounting which are mainly used for decision making purposes.

- 1. To explain costing techniques such as marginal and absorption costing which are relevant for decision making.
- 2. To apply cost-volume-profit analysis and interpret the results.
- 3. To prepare, interpret and understand the role of budgets.
- To explain standard costing and variance analysis.

PDT 344/3 INNOVATION MANAGEMENT & PRODUCT DEVELOPMENT

Course Synopsis

This course addresses the integration problems in innovative product design, comprehensive management development and industrial finance structure.

Course Outcomes

- To appreciate and understand basic management, innovation management and product development.
- Understand and apply the strategies to commercialize products.
- 3. Able to manage opportunity & risk in product development.

References

- Dussage P, Harts S, Ramantosa B, John Wiley & Sons, 2008 Strategic technology management.

PDT 345/3 CONSUMER BEHAVIOUR

Course Synopsis

Major concepts, research and applications based on natural science study of human behaviour, perception and price tag study, personality theory and application of advertisement, consciousness and memory, consumer involvement and decision making, behavioural methods and consumer analysis

Course Outcomes

- Describe the different types of consumers and their impact on commercial environments.
- 2. Explain the concept consumer in a marketing context.
- Identify and list different types of consumer in a marketing context.
- 4. Demonstrate understanding of the concept customer market.
- 5. Identify and describe the different customer markets.

- Consumer Behaviour by Martin M Evans, Ahmad Jamal, and Gordon Foxall (Apr 21, 2006)

PDT 346/3 PRODUCTION MANAGEMENT FOR DESIGNERS

Course Synopsis

This course addresses the management of operation in manufacturing and services firm. It introduces students to the fundamental concepts of modern production management and discusses its importance to the overall strategy and competitiveness of a firm. Students will learn about the main approaches to supporting the decision process in designing and operating the production and logistics system of an enterprise. Long-term, medium-term and short-term plans which include forecasting, aggregate planning, materials requirement planning (MRP), lot sizing scheduling, project scheduling, supply chain management, inventory management, production planning, materials handling, JIT, Lean production system and human resources, and job design are covered.

Course Outcomes

 Acquire a fundamental knowledge of modern approaches for production and logistics management.

- Ability to do forecasting and determine the accuracy of the forecast methods.
- Ability to develop an aggregate plan and construct the gross and net materials requirement plan.
- 4. Ability to solve the inventory and scheduling problems.
- 5. Ability to examine, deliberate and solve the operation management related cases.

PDT 347/3 PRODUCT STUDY & PROFESSIONAL PRACTICE

Course Synopsis

Case study where the product and its system are analysed in the aspects of design, engineering, marketability, quality and production. Lectures may be given by academic staff, industrial design and engineering experts. Professional approach in industry and consulting. Project organization and management. Professional and ethical responsibilities, contracts, fee determination, copyrights, design registration and law.

Course Outcomes

- 1. To understand the corporate identity of a product.
- 2. To incorporate the corporate identity in the product design life cycle.
- Able to analyze in the aspects of design, engineering, marketability, quality and production.
- 4. Able to understand the process of product documentation.

PDT 442/3 COMMERCIALIZATION CULTURE

Course Synopsis

This course aims at developing student capability, professionalism and working culture in planning, preparation and managing of product design promotion and exhibition event. The student will be exposed by visiting local trade exhibitions and practices negotiation techniques. The students have to complete the product package with their own branding and corporate identity included promotion of their Final Year project. At the end of the

course the student will prepare and launch an exhibition event which manages by them.

Course Outcomes

- Ability to perform and work in a group, communicate effectively and able to work independently.
- 2. Ability to analyze the concept of the commercialization relations to its culture.
- 3. Ability to analyze the product lifecycle and it relationship with commercialization aspects.

PDT 313/4 FINAL YEAR PROJECT

Course synopsis

A projects based course that exposes students to solve, analyze, design and research engineering problems in the field of manufacturing engineering, machining or product design.

- Ability to apply and integrate theories and lab, known how that has been learnt to solve engineering problems.
- Ability to produce either a new design or toimprove on an existing design.
- 3. Ability to choose a suitable research methodology for the research project being undertaken.
- Ability to write. Present and defend the technical report (desertation) for the projects undertaken.

Bachelor of Mechanical Engineering Technology (Honours) (Materials Processing)

Programme Objectives (PEO)

PEO 01

Applying knowledge of materials processing technology in different areas of materials engineering and possess sufficient technical skills to work in the industry.

PEO 02

Demonstrate as a knowledgeable and talented engineering technologist in problem solving skills, in addition to materials processing, characterization and testing in materials processing technology field.

PEO 03

Upholding the importance of professionalism and ethics of materials processing profession to form a cultured and more developed society.

PEO 04

Nurturing materials engineering technologist who are committed to the importance of life-long learning and continuous improvement.

Programme Outcomes (PO)

PO 01

Apply knowledge of mathematics, science, engineering fundamentals and engineering specialisation principles to defined and applied engineering procedures, processes, systems or methodologies.

PO 02

Solve broadly-defined engineering problems systematically to reach substantiated conclusions, using tools and techniques appropriate to their discipline or area of specialisation.

PO 03

Design solutions for broadly-defined engineering technology problems, and to design systems, components or processes to meet specified needs with appropriate consideration for public health and safety, as well as cultural, societal, environmental and sustainability concerns

PO 04

Plan and conduct experimental investigations of broadly-defined problems, using data from relevant sources.

PO 05

Select and apply appropriate techniques, resources and modern engineering tools, with an understanding of their limitations.

PO 06

Function effectively as individuals, and as members or leaders in diverse technical teams.

PO 07

Communicate effectively with the engineering community and society at large.

PO 08

Demonstrate an awareness of and consideration for societal, health, safety, legal and cultural issues and their consequent responsibilities.

PO 09

Demonstrate an understanding of professional ethics, responsibilities and norms of engineering technology practices.

PO 10

Demonstrate an understanding of the impact of engineering practices, taking into account the need for sustainable development.

PO 11

Demonstrate an awareness of management, business practices and entrepreneurship.

PO 12

Recognise the need for professional development and to engage in independent and lifelong learning

Course Synopsis

Courses Syllabus

PDT101/3 STATICS AND DYNAMICS

Course Synopsis

This course comprises two parts, namely; statics and dynamics. In statics, the basic principles of engineering mechanics such as forces, moments and friction are introduced. Students are required to apply this basic knowledge in analusing the equilibrium of rigid bodies, as well as the stability of a structure. The subjects of dunamics cover the concept of kinematics and kinetics. Kinematics treats the geometric aspects of the motion, whereas kinetics analyses the forces that cause the motion. Analyses in relation to kinetic problems are solved using acceleration method, principle of work and energy, and principle of impulse and momentum.

PDT106/3 ENGINEERING GRAPHICS

Course Synopsis

This course provides the skills to students the basics of Engineering Drawing, Computer Aided Drafting (CAD) and their engineering applications. The course covers the detail of Engineering Drawing for beginners followed with projection systems, oblique and isometric sketches. The course also introduced the Computer Aided Drafting using dedicated software, AUTOCAD, which focuses on product design in 2D and 3D environment. Fundamental knowledge in dimensioning and geometrical tolerance (GDT) enhances student's ability in interpreting and assessing information from basic raw data of an engineering drawing.

PDT133/2 WORKSHOP TECHNOLOGY

Course Synopsis

In this course, explanation about safety aspects in workshop will be covered, followed by fundamental measurement techniques, and use of measurement equipment such as Vernier Caliper, Chiseling, Sawing, etc. Students will be introduced to fabrication, sheet metal forming, and welding processes which consists of introduction to basic

knowledge of various cutting methods and hand tools, such as file, hacksaw, chisel, and etc.

The second part of the course introduces the fundamentals of measurement techniques' followed by milling, lathe and grinding operations which consist of introduction to basic knowledge of various cutting tools, parts of machines and their functions, machine operations, and numerous calculations involving the operations. Students will practice conventional machining process that it used in the industry to transform raw material to finished products. Practical work will help students gain effective understanding.

PDT 151/2 INTRODUCTION TO MATERIALS PROCESSING TECHNOLOGY

Course Synopsis

This is a course for undergraduate students majored in materials engineering technology. It is designed to teach the basic knowledge to processing methods used to manufacture materials such as metal, ceramic, polymeric and composites components. The topics covered will include casting, joining, deformation processing, machining, powder processing of metals and ceramics, polumer processing, coating processes, microelectronics manufacturing, materials selection, and manufacturing process selection.

PDT 180/3 ENGINEERING SCIENCE

Course Synopsis

The course covers foundations of quantity and units of measurement, vectors, particle dynamics, work, power and momentum. Additional coverage includes forces on objects and introduction to electrical circuit.

Prentice Hall, New York, NY.

Course Synopsis

This course introduces students to historical perspective of materials science and engineering fundamentals characteristics begin from understanding the atomic structures, atomic bonding in solids, crystal structures, mechanical and physical properties of materials. Students will then apply the understanding on properties of materials through phase diagram, transformations and heat treatment processing on ferrous and nonferrous alloys, polymer and advanced materials

PDT 120/3 BASIC ELECTRICAL AND ELECTRONIC

Course Synopsis

This course provides basic knowledge of solving DC and AC electrical circuits. It also covers the fundamentals of electrical machines. The electronics section includes basic semi conductor diodes and transistors as well as the fundamentals of digital systems. At the end of the semester students will be able to understand, analyze and apply basic electrical and electronics concept and principles.

PDT 152/3 MATERIALS CHEMISTRY

Course Synopsis

This course is designed to introduce the students aspect of thermodynamics including first law and second law of thermodynamics, Reaction kinetics such as effect of reactants and products concentration, effect of temperature, determination of order and velocity constant of reaction, electrochemistry and interface phenomenon.

PDT 153/3 MATERIALS STRUCTURE AND PROPERTIES

Course Synopsis

This course is designed to introduce some fundamentals of materials engineering; materials structure, solid defects and basic theory of diffusion. Introduction to mechanical and physical properties for various types of engineering materials, how these properties are measured and what these properties represent.

References

PDT 154/3 MATERIALS TESTING

Course Synopsis

This course is designed to expose students the theory and practical aspects of materials testing using destructive and non-destructive tests such as compression test, charpy impact testing, hardness test, magnetic particle test and liquid penetration test.

References

PDT 251/3 THERMO-FLUIDS

Course Synopsis

This course will cover the basic knowledge, comprehension and application of law of thermodynamic to understand the relationship between the properties that matter exhibits as it changes its condition. The first part includes

review of thermodynamic concept, statistic thermodynamic and solution. The second part covers the phase equilibrium, thermodynamic of phase diagram, crystal defect, phase transformation unary and heterogeneous system, solution, phase equilibrium, surface and interface, defects in crystal, phase transformation and energy of interfaces.

PDT 201/3 STRENGTH OF MATERIALS

Course Synopsis

Stress analysis, stress theory, strain analysis, relationship of stress-strain and stress-strain temperature. Axial load, torsional loading, bend loading, bending stress and strain deflection. Elastic deflection failure, excessive yeilding failure, fracture failure, excessive deflection failure and progressive failure. Methods of integration, moment area methods, methods of superpotion, enegy methods and plastic analysis. Combined axial and bending load, combined axial, bending and torsion load. Buckling of column, end support condition and empirical formula. Rivet and bolt analysis (average shear strength and tensile strength), connection analysis.

PDT 253/3 MATERIALS PROCESSING LAB

Course Synopsis

The purpose of this laboratory is to familiarize students with experimental set-up and use of metallurgical apparatus. In addition, the students will learn hands on experience in examination of different materials through metallographic examination,

tensile property characterization, different hardness testing methods, and effect of different thermal processing on the mechanical properties and microstructure. Safety aspects and regulations on conducting scientific experiments are also briefed and taught.

PDT 264/3 ELECTRONIC MATERIALS

Course Synopsis

Materials and the interfaces between them are the key elements in determining the functioning of electronic devices and systems. This course develops the fundamental parameters of the basic solid material types and their relationships to electrical, thermal, mechanical, and optical properties. The application of these materials to the design and fabrication of electronic components is described, including integrated circuits, passive components, and electronic boards, modules, and systems.

PDT 236/2 COMPUTER PROGRAMMING

Course Synopsis

This course introduces basic programming using high level language (C language). The main objective of this course is to prepare the students with the ability of problem solving with programming tools such as organization chart, IPO chart, flowchart and pseudo code and then to implement them by developing C program.

 McGraw Hill.

Course Synopsis

Introduction to the traditional whiteware ceramics materials including types, properties and applications. Student will be exposed to the traditional ceramics processing including different shaping techniques, drying, firing and glazing.

PDT 262/3 METAL EXTRACTION TECHNOLOGY

Course Synopsis

This course will introduce student to mineral processing and general principle in extracting metal from ore: hydrometallurgy, elecrometallurgy and purometallurgu. This course will exposed student to the advantages mineral processing, crushing, grinding, sizing, classification, gravity concentration, magnetic and electrostatic separation and flotation. Hudrometallurgu: Leaching: process and mode of leaching. Leaching technique: insitu leaching, dump leaching, heap leaching, vat leaching, bacterial leaching, electrochemical leaching, Counter current leaching system. Electrometallurgy: Electrorecovery

and electropurification: principles, electrochemical, electrod potential, overpotential, limited potential, electrochemical/elecrolysis cell. Pyrometallurgy: Ore treatment by roasting, calcination, and sintering. Melting and smelting, matte smelting. Reduction of iron ore from blast furnace. Direct smelting/melting.

PDT 263/3 PLASTIC PROCESSING

Course Synopsis

This course will provide students with a broad knowledge on the aspect of thermoplastic and

thermoset processing methods, parameters, and also knowledge on the thermoplastic and thermoset compounding and additives. This course also will expose student to environmental of plastic product.

References

PDT 364/3 COMPOSITE MATERIALS PROCESSING

Course Synopsis

This course is focusing on three major types of composite materials which are Ceramic Matrix Composite (CMC), Polymer Matrix Composite (PMC), and Metal Matrix Composite (MMC). Lectures cover on several important aspects of composite materials. This includes the introductions, classifications,

properties, applications and characterizations of composite materials, matrix and reinforcement phase, manufacturing and processing methods, types and influence of different reinforcement, inter-phase properties, current and future potential applications of composite products. At the end of this course, students will have a comprehensive knowledge and well understanding regarding composite materials processing.

PDT 361/3 TECHNICAL CERAMIC PROCESSING

Course Synopsis

Introduction to the technical ceramics including properties and applications. Student will be exposed to the modern technical

ceramic, glass and glass ceramics processing technology including raw materials preparation, different shaping techniques, sintering and finishing.

PDT 362/3 METAL FABRICATION TECHNOLOGY

Course Synopsis

Metal fabrication technology program focused towards sheet metal, plates and structure fabrication in the engineering and construction field. Metal fabrication technology will exposed student to the heavy metal plating used in building structure and wall panels, oil and gas, power station, pipeline building in the transportation of liquid and gas, large storage boilers and vessels, platform for oil and rigs and heavy industrial plant. Student will be provided with strengthening of theoretical knowledge with high degree of design and practical work usage of modern CNC metal fabrication machinery, equipment and state-of-the-art CAD/CAM solutions. The main objective of the course is to prepare students to the needs and demands of the current and future industry with regards to fabrication, welding, inspection and testing.

PDT 363/3 RUBBER AND LATEX PROCESSING

Course Synopsis

This course expose student to basic knowledge, principle, and concept of rubber and latex processing. This course also focus on compounding, formulation, production, characterization and testing of latex and rubber processing.

References

- Gent, A. N. Engineering with Rubber: How to Design Rubber Components. 2nd ed. Hanser Publishers, Munich (2001).

PDT 351/3 MATERIALS FAILURE ANALYSIS

Course Synopsis

A comprehensive overview of the field, this course covers three principal areas of interest such as procedures for failure analysis, root-caused of failure, failure mechanisms and recommendation to prevent future failure. The forensic analysis of product/component failures is also studied from beginning to end for certain case studies that normally happen in industries. The module also provides hands-on experience on material failure analysis during laboratory work and on site visit. Student also exposed with technical report writing technique through mini project.

PDT 352/3 DESIGN OF DIE & MOULDS

Course Synopsis

The aim of this course is to derive knowledge on mould design for plastic injection moulding purposes and general die design. The generate knowledge will provide an effective skill to counter and solve the common problem approach in mould and die basis.

References

PDT 451/3 MATERIALS SELECTION & DESIGN

Course Synopsis

This course builds an understanding of the inter-relationship between selection, materials processing,

product design (material, design and processing) and product performance to develop a holistic approach to optimum selection of materials for engineering and industrial applications. The focuses of this course are fundamentals of the design process, specifications, decision-making, materials selection, materials process, experimental design, statistic process control and preliminary design. The course integrates vertically and horizontally concepts from all areas of engineering technology and material processing and into a practical design project designed to train the students in the design practice.

PDT 464/4 ELECTRONIC PACKAGING

Course Synopsis

Introduction on the overview of microelectronic packaging such as function of an electronic package, packaging hierarchy, and brief history of microelectronic packaging technology. In addition, they will be introduced to few types of electronic packages such as Ball Grid Array (BGA), Land Grid Array (LGA), Flip Chip (FC), Direct Chip Attach (DCA) etc.

PDT 463/4 ADVANCED POLYMER TECHNOLOGY

Course Synopsis

This course aims to expose students on concepts of various technology of polymers including natural and synthetic polymers. Details fundamental of polymer properties such as classification of polymers and polymerizations will be emphasized. The course will further discuss and explain the preparation and manufacture of polymer resin. At the end of the course, students should be able to arrange different types of manufacturing technology for various types of polymers.

Bachelor of Mechanical Engineering Technology (Hons.) (Sports Technology)

Programme Objectives (PEO)

PEO 01

To produce competent Engineering Technologists who are able to apply principles of science, engineering and modern technology in solving current and future problems related to mechanical engineering field.

PEO 02

To produce Engineering Technologists in mechanical engineering field who perform work and duty ethically with high moral values and responsibility to God, nation and societies.

PEO 03

To produce creative and innovative Engineering Technologist in research and development in fulfilling the nation's requirements.

PEO 04

To produce Engineering Technologists who are able to communicate effectively with good leadership as well as able to function in teamwork environment.

PEO 05

To produce Engineering Technologists that shows enthusiasm in engaging long-life learning through continuity of learning, technical practices and professional development.

Programme Outcomes (PO)

PO 01

Apply knowledge of mathematics, science, engineering fundamentals and engineering specialisation principles to define and applied engineering procedures, processes, systems or methodologies.

PO 02

Solve broadly-defined engineering problems systematically to reach substantiated conclusions, using tools and techniques appropriate to their discipline or area of specialisation.

PO 03

Design solutions for broadly-defined engineering technology problems, and to design systems, components or processes to meet specified needs with appropriate consideration for public health and safety, as well as cultural, societal, environmental and sustainability concerns.

PO 04

Plan and conduct experimental investigations of broadly-defined problems, using data from relevant sources.

PO 05

Select and apply appropriate techniques, resources and modern engineering tools, with an understanding of their limitations.

PO 06

Function effectively as individuals, and as members or leaders in diverse technical teams.

PO 07

Communicate effectively with the engineering community and society at large.

PO 08

Demonstrate an awareness of and consideration for societal, health, safety, legal and cultural issues and their consequent responsibilities.

PO 09

Demonstrate an understanding of professional ethics, responsibilities and norms of engineering technology practices.

PO 10

Demonstrate an understanding of the impact of engineering practices, taking into account the need for sustainable development.

PO 11

Demonstrate an awareness of management, business practices and entrepreneurship.

PO 12

Recognise the need for professional development and to engage in independent and lifelong learning.

PDT101/3 STATICS AND DYNAMICS

Course Synopsis

This course comprises two parts, namely; statics and dynamics. In statics, the basic principles of engineering mechanics such as forces, moments and friction are introduced. Students are required to apply this basic knowledge in analysing the equilibrium of rigid bodies, as well as the stability of a structure. The subjects of dunamics cover the concept of kinematics and kinetics. Kinematics treats the geometric aspects of the motion, whereas kinetics analuses the forces that cause the motion. Analyses in relation to kinetic problems are solved using acceleration method, principle of work and energy, and principle of impulse and momentum.

Course Outcomes

- Ability to apply and analyse the basic principles of physics related to static such as force, moment, Newton's First, second and Third Law, trusses, frame and machine.
- 2. Ability to apply and analyse the structures and frameworks problems by constructing, sketching and/or drawing free body diagram in ensuring static equilibrium.

- Ability to apply and analyse the kinematics and kinetics for particles and systems of particles.
- Ability to apply and analyse the planar kinematics and kinetics of a rigid body.

PDT106/3 ENGINEERING GRAPHICS

Course Synopsis

This course provides the skills to students the basics of Engineering Drawing, Computer Aided Drafting (CAD) and their engineering applications. The course covers the detail of Engineering Drawing for beginners followed with projection sustems, oblique and isometric sketches. The course also introduced the Computer Aided Drafting using dedicated software, AUTOCAD, which focuses on product design in 2D and 3D environment. Fundamental knowledge in dimensioning and geometrical tolerance (GDT) enhances student's ability in interpreting and assessing information from basic raw data of an engineering drawing.

- To apply the basic drafting, sketching engineering components, and common term used in engineering drawing.
- 2. To apply orthographic, auxiliary view, cross section and isometric in engineering drawing.
- To apply geometric, dimensioning, and tolerancing (GDT) in engineering drawing.

PDT1XX/3 HUMAN ANATOMY AND PHYSIOLOGY

Course Synopsis

An introductory course to human anatomy and physiology, the students will be exposed to the basic knowledge on cell and tissues, skin and appendages, circulatory and cardiovascular system, the

respiratory system, nervous system, special senses, the musculoskeletal system, digestive system and and metabolism, lymphatic and immune system, the endocrine system, urinary system and also the reproductive system. At the end of the course, the students are expected to master the anatomical and physiological aspects of the human body and able to apply basic engineering principles in solving health problems.

Course Outcomes

- 1. Ability to illustrate and describe the human anatomy.
- 2. Ability to discuss physiological function of various organ systems.
- Ability to compare and distinguish important homeostasis abnormalities in human physiology.

PDT2XX/3 SPORTS BIOMECHANICS

Course Synopsis

This is an introductory course to sports biomechanics which covers the engineering mechanics. anatomy and basic applications on the analysis of the human body as mechanical systems. This course aims to integrate the knowledge of fundamental anatomy and mechanics to develop a deeper understanding of the field of human movement science especially in sports activities. This subject aims to introduce students to the fundamentals of biomechanics and to relate these to mechanical actions of, by and on the body.

- Ability to define, explain and compare the biomechanics and anatomy terminologies and their relationships.
- 2. Ability to analyze kinematics and kinetics problems for particles and rigid bodies.

Ability to solve engineering problems by choosing appropriate method that related to statics and dynamics.

PDT2XX/3 SPORTS MATERIALS

Course Synopsis

A solid foundation of materials science and engineering is required to successfully design sports equipment and to understand its structural properties. Sports equipment covers the full range of traditional biological materials like wood to advanced spacecraft materials. The appropriate selection and design of sports materials

enhances the performance of athletes and prevents injuries. This course introduces the fundamental concepts of materials by specific properties and applications of materials for the design of sports equipment. One topic provides the design guide for protective equipments. The section on materials testing covers the fundamental concepts of experimental design and specific application to sports equipment.

PDT120/3 BASIC ELECTRICAL AND ELECTRONIC

Course Synopsis

This course provides basic knowledge of solving DC and AC electrical circuits. It also covers the fundamentals of electrical machines. The electronics section includes basic semi conductor diodes and transistors as well as the fundamentals of digital systems. At the end of the semester students will be able to understand, analyze and apply basic electrical and electronics concept and principles.

- Ability to implement and analyze basic electrical circuits.
- 2. Ability to analyze single phase and three phase a.c circuits.
- 3. Ability to analyze the three phase induction motors.

4. Ability to implement and analyze basic electronics circuits.

PDT122/3 MATERIAL SCIENCE

Course Synopsis

This course introduces students to historical perspective of materials science and engineering fundamentals characteristics begin from understanding the atomic structures, atomic bonding in solids, crystal structures, mechanical and physical properties of materials. Students will then apply the understanding on properties of materials through phase diagram, transformations and heat treatment processing on ferrous and nonferrous alloys, polymer and advanced materials.

Course Outcomes

- Ability to describe and explain the materials' atomic structures, bonding, crystal structure and imperfections.
- 2. Ability to explain and analyse the mechanical, physical properties of materials.
- Ability to explain and analyse the metal alloys microstructure, phase diagram and heat treatment processes.
- Ability to describe and explain machinability of ferrous and non-ferrous metal alloys, polymer materials and advanced materials...

PDT106/3 ENGINEERING GRAPHICS

Course Synopsis

This course provides the skills to students the basics of Engineering Drawing, Computer Aided Drafting (CAD) and their engineering applications. The course covers the detail of Engineering Drawing for beginners followed with projection sustems, oblique and isometric sketches. The course also introduced the Computer Aided Drafting using dedicated software, AUTOCAD, which focuses on product design in 2D and 3D environment. Fundamental knowledge in dimensioning and geometrical tolerance (GDT) enhances student's ability in interpreting and assessing information from basic raw data of an engineering drawing.

- To apply the basic drafting, sketching engineering components, and common term used in engineering drawing.
- To apply orthographic, auxiliary view, cross section and isometric in engineering drawing.
- To apply geometric, dimensioning, and tolerancing (GDT) in engineering drawing.
- 4. To apply detail and assembly drawing in engineering drawing.

PDT133/2 WORKSHOP TECHNOLOGY

Course Synopsis

In this course, explanation about safety aspects in workshop will be covered, followed by fundamental measurement techniques, and use of measurement equipment such as Vernier Caliper, Chiseling, Sawing, etc. Students will be introduced to fabrication, sheet metal forming, and welding processes which consists of introduction to basic

knowledge of various cutting methods and hand tools, such as file, hacksaw, chisel, and etc.

The second part of the course introduces the fundamentals of measurement techniques' followed by milling, lathe and grinding operations which consist of introduction to basic knowledge of various cutting tools, parts of machines and their functions, machine operations, and numerous calculations involving the operations. Students will practice conventional machining process that it used in the industru to transform raw material to finished products. Practical work will help students gain effective understanding.

Course Outcomes

- Work in a group, communicate effectively; apply basic industrial safety regulation as well as emergency first aid techniques.
- Ability to apply and understand engineering drawing and able to transfer for model/prototype fabrication.
- 3. Define and operate the conventional machining.

PDT 236/2 COMPUTER PROGRAMMING

Course Synopsis

This course introduces basic programming using high level language (C language). The main objective of this course is to prepare the students with the ability of problem solving with programming tools such as organization chart, IPO chart, flowchart and pseudo code and then to implement them by developing C program.

Course Outcomes

 Ability to describe and apply design elements and principles in design projects and assignments.

- 2. Ability to analyze aesthetic value of 2 dimensional artwork and 3 dimensional objects of the design output.
- 3. Ability to recognize/realize the important of leadership and teamwork in producing projects or assignments for better output.

PDT111/3 MANUFACTURING PROCESS

Course Synopsis

This course explores the manufacturing process which used in industry to convert raw material into finished product.

This course is devided into five sections. First, the introduction to manufacturing technology will be given, followed by material selection in manufacturing and heat treatment process. Secondly, the casting technology and various metal casting processes will be introduced including sand casting. investment casting, vacuum casting and other casting processes. Thirdly, overview of forming and shaping process will be given on rolling. forging, extrusion, drawing, sheetmetal formina, powder metallurau. processing of ceramics, injection molding, and rapid prototyping process. Fourthly is about various joining process such as brazing. soldering, adhesive bonding, and mechanical fastening processes.

Course Outcomes

- Ability to describe the concept & methodologies of manufacturing technology and fundamental of materials in manufacturing.
- 2. Ability to describe and analyze the concept & methodologies of solidification processes.
- 3. Ability to analyze and evaluate the concept of forming and shaping processes.
- Ability to analyze and evaluate the concept & methodologies of joining and assembly technology.

PDT2XX/3 PHYSIOLOGY OF SPORTS & EXERCISE

Course Synopsis

The purpose of this course is to increase the student's knowledge and understanding about human physiology and the adaptations that occur during sport and exercise activities. Sport and exercise physiology is a branch of physiology that deals with the functioning of the human

body during sports activities and exercise. An understanding of how the body responds to acute and chronic exercise is crucial for the physical educator, athletic trainer, coach, fitness expert, or exercise physiologist. Emphasis is placed on bioenergetics as well as circulatory, respiratory and neuromuscular responses to the physical stress of exercise. Also discussed are the effects of environmental factors and ergogenic aids on athletic performance.

Course Outcomes

- Ability to describe and explain of how the body responds during sports and exercise activities.
- Ability to explain the interactions of metabolism, circulation, and structural adaptations in response to exercise and training.
- 3. Ability to describe the influence of nutrition, environmental factors and ergogenic aids on the sport performance.

fitness and performance' 2nd edition, New York, NY. Lippincott, Williams and Williams, 2000.

PDT2XX/3 MACHINE ELEMENTS

Course Synopsis

This module is to introduce a wide range of machine elements and to understand their behaviour and use in machines; to choose proper standard machine elements and check its functionality, to calculate main geometrical and functional parameters of non standard machine elements. To ground structures of machine elements, display the essence of various calculations.

Course Outcomes

- Ability to describe and demonstrate about structure, classification, main parameters of the machine elements, criteria of functionality, methods of computations of typical machine elements.
- Ability to describe and choose proper standard machine elements and check its functionality for specific system design.

 Ability to explain and apply proper design parameters to solve problems of machine elements in mechanical system.

PDT3XX/4 COMPUTER AIDED ENGINEERING ANALYSIS

Course Synopsis

The course will equip students with the necessary knowledge to use finite element analysis to solve problems related to solid mechanics, dynamics, heat-transfer and acoustics. FEA is a design/research tool that is extensively used in industry and research institutions. Students will also gain hands-on experience in using commercial finite element analysis software to solve realistic engineering problems.

Course outcomes

- Ability to apply and analyse the effective problemsolving techniques to simple engineering problems.
- Ability to demonstrate and apply the computer-based methods for data processing and engineering problem solving.
- Ability to apply and evaluate various appropriate computer methods/software tools to solve particular engineering problems.

PDT3XX/4 ERGONOMICS & SAFETY

Course Synopsis

This course introduces application of knowledge about human capabilities and limitations to the design of workplaces, work methods and jobs for optimal safety, efficiency, productivity and comfort.

Course Outcomes

- Ability to increase awareness of the need for and role of ergonomics in occupational health
- Ability to obtain basic knowledge in the application of ergonomic principles to design of sport arenas and the prevention of athlete injuries.
- 3. Ability to describe the breadth and scope of sport ergonomics equipment ans facilities.

PDT3XX/4 SPORTS FACILITIES & ARENAS

Course Synopsis

This course will provide students with an understanding of the factors involved in planning, designing, equipping and managing sports facilities.

Course Outcomes

- Ability to describe and explain the process related to analyzing, planning, and designing sports facilities.
- 2. Ability to explain the principles and techniques of construction and equipment bids for sports facilities.
- Ability to describe and apply methods of operation and maintenance of sports facilities.

PDT 313/4 FINAL YEAR PROJECT

Course Synopsis

A projects based course that exposes students to solve, analyze, design and research engineering problems in the field of mechanical engineering.

Course Outcomes

 Ability to apply and integrate theories and lab, known how that has been learnt to solve engineering problems.

- 2. Ability to produce either a new design or toimprove on an existing design.
- Ability to choose a suitable research methodology for the research project being undertaken.
- 4. Ability to write, present and defence the technical report (desertation) for the projects undertaken.

School of Business Innovation and Technopreneurship (PPIPT)

Program

- Bachelor of Business (Honours) (Engineering Entrepreneurship).
 - Bachelor of Business (Honours) (International Business).

Address

PUSAT PENGAJIAN INOVASI PERNIAGAAN DAN TEKNOUSAHAWAN (PPIPT)

Universiti Malaysia Perlis (UniMAP) Jalan Kangar – Alor Setar 01000 Kangar Perlis

> Tel: +6(04) 979 7707 Faks: +6(04) 979 7708

School of Business Innovation and Technopreneurship (PPIPT) are recognized by Ministry of Education (MOE) since June 4, 2010 and are approved by Malaysian Qualifications Agency (MQA) for the following two programs since 30 April 2014. Prior to that, since July 2009, PPIPT offers two undergraduate degree programs; which are Bachelor of Business (Honours) (Engineering Entrepreneurship) and Bachelor of Business (Honours) (International Business).

These two programs are designed with their own strength and extra edge. The Business Program for Engineering Entrepreneurship provides the students with an opportunity to be directly involved in business organisations through various activities such as the business incubator program. The program is conducted for 8 weeks during the semester break and the students are placed in selected incubators across the country.

In this program, the students are exposed from the development of new products up to the commercialisation of the products. They also have the opportunity to develop networks with entrepreneurs and business leaders through the activities that are organised from time to time. Moreover, they are exposed to basic engineering knowledge which covers various engineering disciplines. The students are also trained to be graduate entrepreneurs and catalyst for the economic growth of the nation through business and entrepreneurial activities.

On the other hand, the Business Program for International Business provides students an opportunity to enroll in at least one foreign language course which is other than their own mother tongue. The foreign language courses are held for 4 semesters in a row giving the students the ample trainings to master the language to be used in the business environment. Other than that, students also have the opportunity to undergo Industrial Training for 3 months locally and 1 month abroad. Students who show excellent academic achievement in both academic and co-curricular activities have the opportunity to be selected to do their Industrial Training abroad. Results have shown that the students are able to develop international business network with multinational companies through the Industrial Training experienced.

Bachelor of Business (Honours) (Engineering Entrepreneurship) and Bachelor of Business (Honours) (International Business)

Bachelor of Business (Honours) (Engineering Entrepreneurship)

Program Educational Objective (PEO)

- 1. Graduates who are entrepreneurs.
- 2. Graduates who are entrepreneurial leaders in the chosen field as demonstrated through career advancement.
- Graduates who pursue continuous educational opportunities.
- 4. Graduates who contribute to society.
- Graduates who contribute through research and development.

Program Outcomes (PO)

- 1. Ability to apply knowledge of entrepreneurship, business management and basic engineering.
- 2. Ability to identify problems, create solutions and innovate to improve decision making and problem solving.
- 3. Ability to apply business operation practices and principles used in the current business environment.
- Ability to communicate effectively.
- Ability to demonstrate an in-depth understanding of entrepreneurship, the process of innovation and the need for sustainable development.
- 6. Ability to understand professional and ethical responsibilities.
- 7. Ability to operate with multi-disciplinary teams.
- Ability to recognize the need for, and engage in life-long learning.
- 9. Ability to understand social, cultural and environmental responsibilities of an entrepreneur/manager.
- 10. Ability to recognize potential utilities of engineering applications as business opportunities.

Bachelor of Business (Honours) (International Business)

Program Educational Objective (PEO)

- 1. Graduates who are managers
- Graduates who are business leaders experienced in global/ international business environment
- Graduates who pursue continuous educational opportunities
- 4. Graduates who contribute to society
- Graduates who contribute through research and development

Program Outcomes (PO)

- Ability to apply knowledge of business management in the work environment
- Ability to identify problems, create solutions and innovate to improve decision making and problem solving
- 3. Ability to apply business operation practices and principles used in the current business environment
- 4. Ability to communicate effectively
- Ability to demonstrate an in-depth understanding of entrepreneurship, the process of innovation and the need for sustainable development
- 6. Ability to understand professional and ethical responsibility
- 7. Ability to operate with multi-disciplinary teams
- 8. Ability to recognize the need for, and engage in life-long learning.
- Ability to understand the social, cultural and environmental responsibilities from a global perspective
- 10. Ability to adapt to international business environments.
- 11. Ability to communicate proficiently in foreign languages

Curriculum Structure for Bachelor of Business (Honours)

(Engineering Entrepreneurship) - 2014/2015 Intake

| YEAR | FIRST | | SECOND | | | THIRD | | |
|--|--|---|----------------|--|---|---|---|---|
| SEMESTER | FIRST | SECOND | | FIRST | *SECOND | Semester Break | FIRST | SECOND |
| Business Program Core / Elective Courses | BFT101/3 Business Economics | BFT107/3 Principles of Finance | Semester Break | BFT103/3 Business Law & Ethics | BFT219/3 Product Design & Development | BIT291/6 Incubator Programme (12 weeks) | BFT223/3 Human Resource Management | BFT338/3 Strategic Management |

BFT103/3 BUSINESS LAW & ETHICS

Course Synopsis

Law governs our daily activities. Similarly, there are certain rules that we have to follow in business transactions. The purpose of having these laws is to provide remedies for the aggrieved parties to take action in the occurrence of any breach of the laws. Business ethics deals with what is right and wrong in organizational decisions, behaviour and policies. Ethics provides the principles and guidelines to assist people in making choices to balance up economic interests and social responsibilities. The main objective of this course is to nurture students' abilities to discuss various laws and ethical issues which affect business operation. Ethical issues exposed include business operations and how business effectively operates.

BQT173/3 BUSINESS STATISTICS

Course Synopsis

This course covers topics on data and statistics, descriptive statistics (tabular, graphical presentation and numerical measures), introduction to random the variable, discrete and continuous probability distributions, sampling and sampling distributions, estimation, hypothesis tests, regression and correlation, and introduction to multiple regression.

Core Courses for Engineering Entrepreneurship (RP52)

BFT211/3 BUSINESS INNOVATION

Course Synopsis

The course explains business opportunities emerging in both business and society's contemporary needs. Main focus of this course is to manipulate student's thinking skills especially in creative and innovative aspects. As a result they shall produce new products, services or processes for customers who would address issues of market segmentation and saturation and changing customer values and user requirements. Creativity and innovation are vital elements for all level of business in order to grow and expand.

BFT213/3 BUSINESS VENTURE MANAGEMENT

Course Synopsis

This course is indeed an extension subject of Introduction to Business (BFT 105). Students need to apply the knowledge that has been gained earlier for the implementation of the business venture and management process and strategies. The main objective of this course is to equip students with communication skills to make good business venture management decisions, and to formulate cost effective business strategies and programs, if we want to attain business organizational objectives. It requires students to integrate, in an optimal manner, the appropriate strategies associated with each element of the marketing mix (4Ps) to produce a comprehensive business venture management plan.

BFT218/3 INTRODUCTION TO MANUFACTURING TECHNOLOGY

Course Synopsis

This course introduces students to some fundamentals of manufacturing technology and its function in product development, production and business. Topics taught include introduction to manufacturing technology and its role in concurrent engineering, metallic and non-metallic material behaviours, casting, forming and shaping processes. Aspects of material removal, joining and surface technology are expose later. Finally, the engineering metrology and quality assurance, manufacturing system and automation, human factors and manufacturing costing.

- Schey J. A, (2000) Introduction to Manufacturing Processes, (3rd Ed.), Mc Graw Hill.

BFT219/3 PRODUCT DESIGN & DEVELOPMENT

Course Synopsis

This course introduces students to various design aspects in the application of product development. Design plays an importance role in transforming product ideas into physical form which is vital to product development. The design function includes engineering design and industrial design. It is complemented by marketing and manufacturing.

 New Products, CRC Press.

BFT220/3 TECHNOLOGY ENTREPRENEURSHIP

Course Synopsis

This course concentrates on the innovative transformation of knowledge into commercial products and services. Students shall access real technologies for commercial potential in terms of licensing and for venture development. The course begins by examining concepts associated with technology commercialization. Concepts are introduced to improve and accelerate the commercialization process, from decisions made by scientist at the research bench, through the development, patenting, and licensing of new technologies, to the formation of entrepreneurial enterprises. Intellectual propertu studies are to be included in this course too.

BFT326/3 PROJECT MANAGEMENT

Course Synopsis

In this course, students shall learn basic management concepts and models that could enhance successful management of projects in engineering and technology. Topics include, structured approach to project management, project life cycle, project selection and evaluation, organizational concepts in project management, project planning, conflict and negotiation, budgeting and cost estimation, scheduling, resource allocation, monitoring, information systems and project evaluation and control. project reviewing and project termination.

BFT362/3 BUSINESS PLAN FOR ENGINEERING

Course Synopsis

Projects This course provides an exposure to the students to write a business plan proposal which combine business and basic engineering aspect. Students shall have an opportunity to put their learning into practice in a specific business plan format with specific product project. The product or project to be included in the proposal shall reflect from various sources such as the faculty, industry or student's project.

Prerequisite

- BFT213 Business Venture Management
- Result must be D+ and above

References

 Barringer, B.R. (2009). Preparing Effective Business Plans. Ph.D. Pearson Education Inc.

BIT291/6 INCUBATOR PROGRAM

Course Synopsis

This course exposes students to the actual entrepreneurship and business world. Students will be stationed in business incubators. and have been assigned to one of the newly startup companies or enterprise. Students shall experience challenges which include start up a company / business the company procedures, banking activities, development of new product, business networking, management of the company and others. Exposure to business world shall trigger students into fostering an entrepreneurial network.

Core Courses for International Business (RE09)

BFT202/3 INTERNATIONAL BUSINESS MANAGEMENT

Course Synopsis

This course covers broad survey of the field of international business. and provides the foundations for further specialisation in this field. It begins with a brief overview of international business and focus on the concept of globalisation. The main objective of this course is to provide students with an understanding and knowledge of international business management concepts. This course also views thinking aspects of international business linked to management, organizations and contemporary culture. It encourages students to apply theories and ideas to practice and to relate them to their own experiences via various examples and many study cases from the business world and a range of practical activities.

- 3. Griffin R. W., & Pustay M. W. (2010), International Business, (6th Edition), Pearson.

BFT314/3 CROSS CULTURAL MANAGEMENT

Course Synopsis

The increase of diversity and alobalization in business require employees, especially managers, to develop cross-cultural competence. to work effectively in international assignments, on cross-cultural teams. This due to diversification customers and clients needs. and to effectively compete or collaborate with competitors, suppliers, partners, and relevant stakeholders, such as governments and other public bodies. Effective training and exposure to cultural differences around the world can help employees learn to be more successful in a variety of business settings. This course seeks to provide students with an understanding of effective cross-cultural management and the challenges occurred internationally. It focuses on culture and management, culture and communication and culture and communication

BFT335/3 INTERNATIONAL BUSINESS ENVIRONMENT

Course Synopsis

This course introduces students to the world of international business environment and devises global strategies in response to changes in the internal and external influences of the business environment. Students also learn various methods of collecting, analysing and organising information and communicating ideas and information, which are core processes of business research and case studies.

BFT351/6 FINAL YEAR PROJECT

Course Synopsis

The course reflects student's abilities to select appropriate research area and then present a substantial piece of work that prove his/her intellectual abilities to the fullest. A well-written project paper is a useful document to employer. The course also provides skills to students who wish to pursue their studies to post graduate level. Student shall learn 'project management' of a substantial piece of work and techniques associated with writing and assembling a large document. These skills shall assist students when it comes to similar ventures in the future.

Prerequisite

Final year student only

BIT190/3 INDUSTRIAL TRAINING 1 BIT290/3 INDUSTRIAL TRAINING 2

Course Synopsis

Industrial training is viewed as an important strategy for students as exposure to the real work situation. These two series of course shall equip them with the necessary skills needed as graduate. It is hoped that students will benefit from the series as well as to provide experience of real working world. In addition, students may use this opportunity to and make the best preparation to enter real working world.

Elective Courses for Engineering Entrepreneurship (RP52)

BFT113/3 ENGINEERING DRAWING

Course Synopsis

This course provides exposure and skills to student in basic Engineering Drawing, Computer Aided Drafting

(CAD) and its applications in product design. The course will cover the details of Engineering Drawing for beginners followed by projection systems, oblique and isometric sketches, before going on to Computer Aided Drafting software, which focuses on product design in 2D. Knowledge in dimensioning and geometrical tolerance (GDT) will enhance student's ability in interpreting and assessing information from basic raw data of an engineering drawing which can be used for business applications.

BFT104/3 E-BUSINESS

Course Synopsis

This course is a comprehensive guide to all aspects of deploying e-business and e-commerce within organization. The course is divided into 3 parts: An introduction to e-business and e-commerce; reviewing alternative strategic approaches and applications of e-business; and how strategy can be implemented.

References

- Chaffey, D. (2009). E-Business and E-Commerce Management: Strategy, Implementation and Practice (4th Edition). Harlow: Financial Times Prentice Hall.

 Commerce (2nd Edition). New
 Jerseu: Pearson Prentice Hall.

BFT 112/3 INTRODUCTION TO ENGINEERING

Course Synopsis

This course introduces students to the basic engineering concepts/ fields and how they can be applicable in manufacturing systems across industries. It also covers issues from engineering disciplines. These key engineering issues shall be translated into entrepreneurial opportunities. For example, how bioprocess engineering can be used in agriculture, food, perfume and pharmaceuticals. Or cause and effect of climate change to the environment. Or the usage of electrical and electronics engineering in power generation and broadcast transmission systems.

BFT212/3 BUSINESS FRANCHISING AND LICENSING

Course Synopsis

This course intends to assist students in developing a clear picture of franchisees and franchisors and to provide them with some insights that will help them to make own decisions when entering the field. Students will learn the concept of franchising and licensing comprehensively. There are 3 focus area in the course: First, a franchisor and franchisee are independent business people who must manage their separate business affairs: second, the franchisor and franchisee are dependent upon each other in order to be successful in business; and third, the franchisorfranchisee relationship bring with it an interdependent contractual obligation that is legally binding upon both parties.

BFT214/3 ENGINEERING ECONOMICS

Course Synopsis

The main purpose this course is to introduce students to methods and modern techniques of engineering economic analysis for decision making, evaluations of economic alternatives, cost control, capital budgeting, managerial cost accounting, deterministic inventory theory and decision-making under uncertainty. It provides a background of economic principles that engineers encounter in working on development projects. Students are also analyse the financial and economic concepts that are required in engineering project financial performance, from the conceptual stage to the engineering and design stages.

BFT215/3 ENTREPRENEURIAL FINANCE

Course Synopsis

The subject covers a broad range of core financial aspects that are pertinent for entrepreneurs in starting a business and understanding the financial aspects of running a business may be an overwhelming experience. The course discusses sole proprietorships, partnerships, limited liability companies, and private corporations. Key financial topics, such as financial statements. break-even analysis, working capital management, and time value of money are also explained and examined. The class will also study important topics in finance and describes how mastering these topics can positively impact business success. Students are also expected to master the financial tools of Time-Value-of-Money and financial statement analysis - Discusses horizontal, vertical. and ratio analysis of financial statements in detail. Other topics of discussion include financial distress and mergers and acquisition, and also personal financial planning which is relevant for entrepreneurs.

Prerequisite

- BFT107 Principles of Finance
- Result must be D+ and above

References

- Adelman, J.P. and Marks, M.A. (2010). Entrepreneurial Finance (5th Edition), Pearson International Edition

- Smith, R.L. and Smith Kiholm, J. (2004). Entrepreneurial Finance (2nd Edition), Wiley Publishing.

BFT216/3 ENTREPRENEURIAL MARKETING

Course Synopsis

Entrepreneurial Marketing is an art and science in choosing target markets and getting, keeping, and growing customers through creating, delivering, and communicating superior customer value. Eentrepreneurial marketing seeks to meet organizational objectives by effectively satisfying customers in a dynamic environment. This course provides an overview of marketing processes, marketing principles, entrepreneurial environment

and provides students with the opportunity to apply the key concepts to practical business situations.

Prerequisite

- BFT108 Principles of Marketing
- Result must be D+ and above

References

- Schindehutte, M., Morris, M. and Pitt, L., (2009), 'Rethinking Marketing: The Entrepreneurial Imperative', Prentice Hall,

BFT312/3 BUSINESS ANALYSIS

Course Synopsis

This course is an analysis of financial information arising primarily from the financial reports of entities. Fundamentals analysis techniques are examined in details with particular emphasis on the application of these techniques in equity (shares) valuations decision. The course comprises three parts

where Part One outlines the four basic steps in the fundamental analysis framework: business analysis, accounting analysis, financial analysis and prospective analysis; Part Two are combining the four skills in addressing the question of valuation; Part Three are applying appropriate skills in several different situations such as credit analysis, mergers and acquisition and financial policy decision.

BFT316/3 LEADERSHIP IN ORGANIZATION

Course Synopsis

This course is a comprehensive guide to all aspects of leadership in organizations. The course is divided into 11 topics: (i) nature of leadership, (ii) leadership thoeries, (iii) perspective of effective leadership behavior, (iv) participative leadership, (v) power

and influence, (vi) charismatic and transformational leadership, (vii) leading change, (viii) leadership in teams, (ix) cross-cultural leadership, (x) developing leadership skills and (xi) strategic leadership by executives.

BFT319/3 RISK MANAGEMENT

Course Synopsis

The subject covers a broad range of core aspects that are pertinent for entrepreneurs as starting a business and understanding the risk management of running a business. The course discusses fundamentals of risk management, risk management techniques and strategies. Key topics include, risk and its treatment, legal principles of insurance, financial risk management, enterprise risk management, and also personal insurance which is relevant for entrepreneurs.

References

- Rejda G. E. (2011). Principles of Risk Management and Insurance (11th Edition). Pearson Publications.

BFT322/3 SUPPLY CHAIN MANAGEMENT

Course Synopsis

This course explored key issues associated with the design and management of industrial supply chains (SC). SC is concerned with the efficient integration of suppliers, factories, warehouses and stores so that products are distributed to customers in the right quantity and at the right time. One of the primary objectives of SC management is to minimize the total SC cost subject to various service requirements.

BFT325/3 LOGISTICS MANAGEMENT

Course Synopsis

The course focuses on the fundamental principles of contemporary logistics management. It involves the roles and contributions of logistics management in ensuring successful supply chain management process (plan, implementation, control); the efficient, effective forward and reverse flow; storage of goods, services and related information. between the point of origin and the point of consumption in order to meet customers' requirements. It then focuses on the additional competitive pressures and reengineering possibilities generated by the rapid advances in Information Technology (IT) and Intelligent Transportation Systems (ITS) technologies. The final part of the course covers transportation management which highlights the multi-modal transportation.

References

- Murphy and Wood (2011), Contemporary Logistics, (Tenth Edition), Prentice Hall
- Ronald H. Ballou (2004), Business Logistics/Supply Chain Management, (Fifth Edition), Prentice Hall

Course Synopsis

This course introduces students to the management functions of planning, organizing, leading and controlling; analyzes the application of these functions in research, design, production, technical marketing and project management; and studies evolution of the engineering career and the transition to engineering management.

BFT329/3 SMALL AND MEDIUM ENTERPRISE

Course Synopsis

The aim of this course is to provide the student with a grounding of the issues involved in small and medium enterprise management. It also covers the differences between SME management and entrepreneurship, development of business plan from an idea, developing a business model, crafting strategy, and implemention of the business plan.

BFT201/3 International Accounting

Course Synopsis

This course is an extension of Principles of Accounting (BFT 106) course and students need to apply the knowledge that has been gained for the implementation of the accounting regulation and practices. The main objective of this course is to explore more on accounting knowledge of the students and to enhance it by putting the accounting issues uniquely confronted by companies involve in international businesses. The course familiarizes them with international accounting regulations, financial reporting, taxation and other accounting practices that exist across the globe.

Prerequisite

- BFT106 Principles of Accounting
- Result must be D+ and above

- Doupnik and Perera (2011). International Accounting (3rd Edition). McGraw Hill.
- Choi and Meek. (2010). International Accounting (7th Edition). Pearson-Prentice Hall.
- Radebaugh, Gray and Black (2006). International Accounting and Multinational Enterprises (6th Edition). Wiley.

BFT203/3 INTERNATIONAL ECONOMICS

Course Synopsis

Student learns the ideas and perspectives of economic theories and thought that build the notion of International Economics. He/she will also learn three major components in International Economic which is International Trade, International Finance, and International Monetary Systems. Later in the chapter student shall use the knowledge to understand the issues and critics in global economy.

Prerequisite

- BFT101 Business Economics
- Result must be D+ and above

BFT204/3 INTERNATIONAL FINANCE

Course Synopsis

The subject matter of international finance course consists of issues raised by the special problems of economic interactions between states. This course introduces the main concepts and theories of international finance and illustrates them with applications drawn from the real world. It will address a wide range of issues, including exchange rate risks and management, international capital budgeting, and the asset and liability management for multinational corporations.

BFT205/3 INTERNATIONAL HUMAN RESOURCE MANAGEMENT

Course Synopsis

This course provides an introduction to the critical issues in organizations in locally and internationally managing their human resources. It focuses on the interrelatedness of corporate strategies and the effective management of human resources, which require different policies. The course is based on the notion that competitive firms and economies which require an appropriate structure, policies and strategies to managing their employees at every level of the enterprise. This is true particularly in multinational enterprises (MNEs) and transnational corporations (TCs).

BFT322/3 SUPPLY CHAIN MANAGEMENT

Course Synopsis

This course explored key issues associated with the design and management of industrial supply chains (SC). SC is concerned with

the efficient integration of suppliers, factories, warehouses and stores so that products are distributed to customers in the right quantity and at the right time. One of the primary objectives of SC management is to minimize the total SC cost subject to various service requirements.

BFT325/3 Logistics Management

Course Synopsis

The course focuses on the fundamental principles of contemporary logistics management. It involves the roles and contributions of logistics management in ensuring successful supply chain management process (plan, implementation, control); the efficient, effective forward and reverse flow; storage of goods, services and related information

between the point of origin and the point of consumption in order to meet customers' requirements. It then focuses on the additional competitive pressures and reengineering possibilities generated by the rapid advances in Information Technology (IT) and Intelligent Transportation Systems (ITS) technologies. The final part of the course covers transportation management which highlights the multi-modal transportation.

Bachelor of Business (Honours) (Engineering Entrepreneurship)

Engineering Entrepreneurship graduates have good business potential because they are trained and well-equipped to be entrepreneurs. Off-campus incubator experience shall strenghten confidence required by the graduates. For those who are looking for business opportunities in the engineering field, this program provides technical and entrepreneurial skills areas. In term of career opportunities, these include broad career prospects in the field of finance, hospitality, investment, public service, marketing and production.

Bachelor of Business (Honours) (International Business)

International Business graduates have reasonably enough knowledge and skills as they have been dealing with International Business, experiencing industrial training at well-known companies. These knowledge and skills are in-line with Malaysia socio-economy. Transformation program especially at international level. In term of career opportunities, these include career as Global Management Officer, International Sales Manager, International Sales Representative, International Business Management, International Finance Manager, Human Resource Manager, Operations Manager, Financial Analyst, Audit Staff, Sales Manager, Project Management Specialist, Investment & Banking Executive and Human Resource Specialist.

School of Human Development and Technocommunication (iKOM)

Programmes Offered

• Bachelor of New Media Communication (Hons.)

Address

SCHOOL OF HUMAN DEVELOPMENT AND TECNOCOMMUNICATION (IKOM)

Universiti Malaysia Perlis (UniMAP) Kompleks Pusat Pengajian UniMAP (Blok B) Jalan Kangar – Arau 02600 Jejawi, Arau, Perlis

> Tel: +(04) 979 8384 Faks: +(04) 979 8175

SCHOOL OF HUMAN DEVELOPMENT AND TECHNOCOMMUNICATION (IKOM)

School of Human Development and Technocommunication (iKOM) is a new faculty which has been upgraded from a Centre for Communication Technology and Human Development (PTKPI). In the year 2014, IKOM advanced forward as a faculty upon the approval of the Ministry of Education to offer a new program, the Bachelor of New Media Communications. It will also continue to serve as a Service Center that manages the university courses for UniMAP.

VISION

Committed to be the center of the development of social science, communication, information technology, and soft skills in competitive international arena.

MISSION

iKOM will form intellectual humanity, personality, superiority, creativity and innovativeness. It will also create competitiveness and competency through the observation of knowledge and soft skills with quality education, rooted in the aspirations of the University.

Centre For International Languages (CIL)

Address

CENTRE FOR INTERNATIONAL LANGUAGES (CIL)

Universiti Malaysia Perlis (UniMAP) No. 5&7, Jalan Kangar-Alor Setar, Taman Pengkalan Asam, 01000 Kangar, Perlis. Malaysia.

> Tel: +6(04) 976 7385 Fax: +6(04) 976 7386

CENTRE FOR INTERNATIONAL LANGUAGES

The Centre for International Languages (CIL) or Pusat Bahasa Antarabangsa, is formerly known as the Department of International Languages (DIL). Established on March 1, 2013, the Centre focuses on providing students and staff of Universiti Malaysia Perlis, and the community within its vicinity, with great opportunities to learn languages.

CIL currently provides language courses which are a requirement for students enrolled in all UniMAP programmes, at both diploma and undergraduate degree levels. It caters to the needs of the ever-growing number of students who seek to be proficient not only in Bahasa Melayu and English, but also in a third language of their choice. Apart from Bahasa Melayu and English, other languages offered at CIL are Arabic, German, Japanese, Korean, Mandarin, Russian and Thai.

CIL places priority in equipping UniMAP students with language skills and competencies which are imperative in this era of knowledge and innovation-based economy. In addition, through our language courses, we sharpen 21st century skills in our students and clients, in supporting and nurturing them to be enterprising individuals who will be able to contribute positively in the world of work. Amongst others, the skills include being creative and innovative, adaptable, being able to work in a team, being effective communicators and are good in problem solving. The team at CIL also support students' learning through the provision of language advisory services, and are ever willing to serve in ensuring that our students and clients get the best from what we have to offer.

University Required Courses

UVW110/2 BASIC MALAY LANGUAGE (ONLY FOR INTERNATIONAL STUDENTS)

Course Synopsis

The aim of this course is to develop students' ability to use the language effectively for purposes of practical communication. The course is based on the linked language skills of listening, reading, speaking and writing, and these are built on as students' progress through their studies. The syllabus also aims to offer insights into the culture and civilization of countries where the language is spoken, thus encouraging positive attitudes towards language learning.

Prerequisite

This course is to be registered by all International students **EXCEPT** students from countries where the Malay Language is used as their national language or spoken language, e.g. students from Indonesia, Brunei and Singapore.

UVW410/2 UNIVERSITY MALAY LANGUAGE

Course Synopsis

The objective of the course is to expose students to the four language skills: listening, speaking, reading and writing. The listening and speaking skills are merged, and focus is given not only on forms and functions, but also on pronunciation. The reading and writing skills; on

the other hand, emphasize on accuracy and grammar, structure and semantics (meaning). Topics for essay writing provide opportunity for students to explore analysis processes, syntax and elaboration.

UVW312/2
ENGLISH FOR TECHNICAL
COMMUNICATION
(ONLY FOR STUDENTS IN
ENGINEERING AND ENGINEERING
TECHNOLOGY PROGRAMMES)

Course Synopsis

This course is designed to prepare engineering and other technical disciplinary students to achieve confidence in extracting, evaluating and sunthesizing information with a view to write good technical documents. Various theories of technical communication will be introduced throughout this course. Students will learn how to prepare technical documents as well as on how to write clearly and concisely. Students will also be exposed to primary and secondary research, techniques of analyzing and interpreting different information and applying functional organization in report writing. At the end of the semester, students are required to formally present their research report orally.

Prerequisite

Students must have either one of these qualifications:

- a) Pass Foundation English with minimum grade C
- b) Obtained at least a MUET Band 4
- c) Obtained TOEFL 525 / IELTS 5.5 and above
- d) UniMAP Diploma graduates who have passed Diploma English 1 and 2 with minimum grade C

UVW415/2 THAI IV

Course Synopsis

At this level, students are exposed to vocabulary closely related to business contexts. The topics

covered will provide students with practice using Thai language in business contexts. Students will be able to read and write longer dialogues and short paragraphs with the correct use of grammar without the help of phonetic transcription. Students should be able to hold a conversation in Thai especially for business purposes.

Prerequisite

Pass Thai III with minimum Grade C.

Course Synopsis

This course is designed for beginners with no prior knowledge of Arabic Language. The course covers listening, speaking, reading and writing skills. Students will be exposed to Arabic characters and correct pronunciation. Students will be able to read and understand short sentences and dialogues. They will learn basic grammar to enable them to write simple sentences in Arabic.

Prerequisite

Students who register **MUST NOT** have any formal qualifications in the language at PMR/SPM level; **and MUST NOT** have followed any education system which uses the language as the medium of instruction.

UVW216/2 ARABIC II

Course Synopsis

At this level, students will learn basic vocabularies. Students will be exposed to more basic grammar and sentence structures. They will also learn to read and write longer sentences and conversations about daily activities. These will further develop students' listening, speaking, reading and writing skills.

Prerequisite

Pass Arabic I with minimum Grade C.

UVW316/2 ARABIC III

Course Synopsis

This course will expand the use of vocabulary relating to daily activities and social contexts .Students will be introduced to use vocabularies learned to produce complete sentences in communication. Students will be able to read longer dialogues and paragraphs relating to daily activities and social contexts.

Students will also learn more various grammar items to write complex sentences and dialogues relating to topics learned.

Prerequisite

Pass Arabic II with minimum Grade

UVW416/2 ARABIC IV

Course Synopsis

At this level, students will use expanded vocabulary and focus on producing longer and grammatically correct sentences. Students will be exposed to read longer paragraphs relating to different social and religious contexts. Students are also engaged in writing more complex and longer sentences relating to the topics learned.

Prerequisite

Pass Arabic III with minimum Grade C.

UVW117/2 JAPANESE I

Course Synopsis

Designed for beginners with no prior knowledge of Japanese Language, this course covers listening, speaking, reading and writing skills. Students will learn to write 2 types of Japanese Writing System, Hiragana and Katakana. Students will be engaged to classroom interactions, practising daily greetings and simple conversations. Students will be introduced to basic elements of the Japanese culture through the topics covered.

Prerequisite

Students who register **MUST NOT** have any formal qualifications in the language at PMR/SPM level; **and MUST NOT** have followed any education system which uses the language as the medium of instruction.

UVW217/2 JAPANESE II

Course Synopsis

Students will be exposed to new vocabulary and will begin to use simple sentences in spoken and written Japanese. They will be introduced to simple grammatical and sentence structures. Students

will learn how to read and write short sentences. Basic elements of the Japanese culture will be also taught in the topics covered throughout the course.

Prerequisite

Pass Japanese I with minimum Grade C.

- Ku Mohd Nabil. (2010). Modul Bahasa Jepun II. Pusat Kemahiran Komunikasi dan Keusahawanan, Universiti Malausia Perlis.

UVW317/2 JAPANESE III

Students will be exposed to expanded vocabulary and higher level grammar, particles and sentence structure. Students will learn reading, writing and speaking longer sentences and dialogues. Throughout the course, students will also learn the elements of Japanese culture in the topics covered.

Prerequisite

Pass Japanese II with minimum Grade C.

UVW417/2 JAPANESE IV

At this level, students will use expanded vocabulary and focus on producing longer and grammatically correct sentences. They will also use the correct particles in both written and spoken Japanese. Students will be engaged in higher level communicative practice. Basic Chinese Characters (Kanji) will be introduced and students will learn more of Japanese culture elements through the topics covered.

Prerequisite

Pass Japanese III with minimum Grade C.

UVW118/2 GERMAN I

Course Synopsis

The objective of this course is to expose students to German language. Students will gain listening, speaking, reading and writing skills in standard spoken and written German language. Students will recognize the basic elements and structures of the language with an understanding of the culture in which the language is spoken. Students will be able to construct 4-5 word sentences for the purpose of communication. Students will also be able to read and comprehend short simple texts.

Prerequisite

Students who register **MUST NOT** have any formal qualifications in the language at PMR/SPM level; **and MUST NOT** have followed any education system which uses the language as the medium of instruction.

UVW119/2 KOREAN I

Course Synopsis

This course is designed for beginners with no prior knowledge of Korean. It introduces students to the Korean language and covers reading and writing of the Hangul script as well as pronunciation. Starting with greetings, the course proceeds to develop communication through basic grammar, vocabulary and reading skills for simple sentences. Students will develop the four skills of listening, speaking, reading and writing in an interactive and integrated manner through theme-based activities that relate to daily life.

Prerequisite

Students who register **MUST NOT** have any formal qualifications in the language at PMR/SPM level; **and MUST NOT** have followed any education system which uses the language as the medium of instruction.

UVW219/2 KOREAN II

Course Synopsis

In this course, students will become more familiar with the morphology of spoken and written Korean. Students will further develop their proficiency in the skills of listening, speaking, reading and writing. These skills will be taught in an interactive and integrated manner through theme-based activities related to everyday life. The course will also enable students to acquire more accurate pronunciation and articulation of Korean words and sentence patterns. Bu the end of the course, they will have a better understanding of Korean lifestyle and culture and they will be able to use Korean in a variety of social contexts.

Prerequisite

Pass Korean I with minimum grade C.

- 47 Korean pronunciation for foreigners. (2009). Seoul University, Korea: Language Education Centre.
- Easy to learn Korean. (2011).
 Korea, Seoul: Sungkyun Language Institute.

- 5. Lee, Z. C. (2007). *Queen' Korean*. (2007). Peking, China: Peking University Press.

UVW319/2 KOREAN III

Course Synopsis

This course aims to expand students' language skills by introducing more complex sentence structures, colloquial expressions in different cultural contexts. Classroom tasks in this course naturally demand a higher level of participation and hence incorporate learning through the use of audio-visual materials and class discussion. This course will introduce students to basic business Korean use and culture behavior in dealing business with people from Korea.

Prerequisite

Pass Korean II with minimum grade C.

References

UVW419/2 KOREAN IV

Course Synopsis

Students are introduced to more complex grammatical forms and sentence structures as compared to

level I, II and III. Classroom tasks in this course would demand a higher level of participation and allow students opportunities to express themselves using the language. Students are exposed to use the language in different authentic contexts that they would encounter in their future workplace.

Prerequisite

Pass Korean III with minimum grade *C*.

- 47 Korean pronunciation for foreigners. (2009). Seoul University, Korea: Language Education Centre.
- 2. Easy to learn Korean. (2011). Korea, Seoul: Sungkyun Language Institute.

Course Synopsis

Russian Language I is a course designed for students who have no previous knowledge of the Russian language. At this level students will gain basic listening, reading, speaking and writing skills in standard spoken or written Russian. Students will learn and recognize Russian Alphabet (Cyrillic) and its sound system, as well as they will be introduced to simple grammar structures and also learn simple daily conversation in the Russian language. Throughout this course students will be introduced to Russian culture.

Prerequisite

Students who register **MUST NOT** have any formal qualifications in the language at PMR/SPM level; **and MUST NOT** have followed any education system which uses the language as the medium of instruction.

Engineering Centre

Address

ENGINEERING CENTRE

University Malaysia Perlis Level 1, Administration Building Pauh Putra Main Campus 02600 Arau, Perlis MALAYSIA

Tel: +6(04) 988 5712 / 5719 / 5720 Fax: +6(04) 988 5739

Engineering Centre

The Engineering Centre is located within Main Campus of UniMAP. It was established to manage laboratories and workshops which are vitally needed for various engineering programs offered by UniMAP. The teaching learning approach practiced in UniMAP is essentially based on practical-oriented; hence the use of labs cannot be overemphasized.

Objectives

Besides managing laboratories and workshop, the Engineering Centre also supports research and development activities in UniMAP. It also aspires to be a centre for designing and creating innovative engineering products. The Engineering Centre offers facilities for courses which require training and technical skills, parallel to industry standard. It also offers 'teaching factory' that is based on industries advanced technology, facilities and conducive environment for research and development activities and training for students and members of staff.

Courses Offered by Engineering Centre

There are two core courses offered by Engineering Centre for undergraduate's level:

- Engineering Skills (ECT111)
- Engineering Skills (ECT112)
- Engineering Skills (PCT111)

And also a core course for diploma level:

Basic Engineering Skill (DCT100)

ENGINEERING SKILLS (ECT111/ ECT112)

- AutoCAD Software Module consist of drawing and editing, layer control and properties modification, hatching, and dimensioning, text and template drawing
- Technical Drawing consists of geometric construction, lettering, tolerance, sectional view and symbols
- MATLAB Software Module consists of M- Files, Projection format, Matrix, vector, scalar and plotting
- Mechanical workshop consists of basic measurement, machining, welding, fitting, sheet metal
- PCB Fabrication process
- PCB design by using OrCAD Software.
- Electrical domestic wiring.
- Mechanical workshop- machining
- PLC Programmable Logic Control.

BASIC ENGINEERING SKILL, (DCT 100)

- Basic knowledge of computer
- Construction and measurement of electronic circuit
- Basic knowledge of electrical wiring
- An exposure to measurement techniques, fitting and sheet metal process
- Experience to the welding techniques and handling of mechanical machine

PCB FABRICATION LAB

Introduction to advance Printed
 Circuit Board process development
 including single sided and double
 sided PCB production. We also can
 produce multi layer PCB process up
 to 6 layers.

PLC LAB

PLC application in automation

CAD/CAM LAB and COMPUTER LAB

 Introducing software of AUTOCAD, MATLAB and ORCAD.

ELECTRICAL WIRING WORKSHOP

 Domestic wiring, installation of surface wiring, PVC conduit and steel conduit wiring systems

MECHANICAL WORKSHOP

 Basic mechanical measurements, sheet metal process, fitting, welding, and machining

BASIC COMPUTER LAB

Hardware assembly and software installation

TEACHING FACTORY

 Injection moulding, CNC turning, CNC milling, wave solder machine, Rapid Prototyping machine, Rotional machine, Vacum casting, powder metalogy, EDM wire cut

TECHNICAL DRAWING STUDIO

Basic technical drawing equipment.

Course Syllabus

ECT111 /PCT111 ENGINEERING SKILLS

Synopsis

This subject is 100% practical coursework and carried out 3 units credit hours. This course contains six modules which are Basic Workshop, Machining, Wiring, PCB Design, PLC, AutoCAD and Technical Drawing that specifically planned for electronic based programs.

Course Outcomes

- Ability to apply and construct a basic skills and standard practiced of mechanical machines and equipments
- Ability to apply and construct the basic skills and standard practiced of domestic wiring.
- Ability to apply and construct a logic system using common controller tool (PLC).
- Ability to apply construct a standard practiced of manual technical drawing and able to design a product using common software (AutoCAD)
- Ability to apply and construct the basic skills and standard practiced of PCB layout design and fabrication process.

Syllabus

Technical Drawing

 DRAW, DISCUSS and APPLY the engineering practice to deliver an accurate technical drawing

Software: AutoCAD

 DEFINE, DISCUSS and USE the engineering software (AutoCAD) as a tool to create 2D and 3D product

Basic Workshop

 DEFINE and DEMOSTRATE the functions of metrology equipments. DESCRIBE and APPLY the techniques of fitting, sheet metal forming and metal joining (welding).

Machining

 DISCUSS and USE a standard mechanical engineering machines such as Milling, Lathe and Grinding Machine to produce general component.

Domestic Wiring

 DISCUSS, DEMOSTRATE and APPLY the techniques of domestic wiring such as surface and conduit (PVC and GI) techniques.

Programmable Logic Control

 DEFINE, DISCUSS and USE of common logic controller which involves with programming, PLC structure and application.

PCB Design & Fabrication

 DEFINE, DISCUSS and USE the engineering software (OrCAD) as a tool to design PCB layout. DISCUSS a process of PCB fabrication and USE common machines to produce PCB.

ECT112 ENGINEERING SKILLS

Synopsis

This subject is 100% practical coursework and carried out 3 units credit hours. This course contains six modules which are Basic Workshop Machining, Wiring, Basic Electronics, Matlab, AutoCAD and Technical Drawing that specifically planned for non-electronic based programs.

Course Outcomes

 Ability to apply and construct a basic skills and standard

- Ability to apply and construct a basic skills and standard practiced of domestic wiring.
- Ability to apply and construct a mathematical analysis using Matlab software.
- Ability to apply and construct a basic skills and standard practiced of manual technical drawing and able to design a product using common software (AutoCAD)
- Ability to apply and construct a basic skill of electronics and its applications.

Syllabus

Technical Drawing

 DRAW, DISCUSS and APPLY the engineering practice to deliver an accurate technical drawing

Software: AutoCAD

 DEFINE, DISCUSS and USE the engineering software (AutoCAD) as a tool to create 1D and 3D product.

Basic Workshop

 DEFINE and DEMONSTRATE the function metrology equipments.
 DESCRIBE and APPLY the techniques of fitting, sheet metal forming and metal joining (welding).

Machining

 DISCUSS and USE a standard mechanical engineering machines such as Milling, Lathe and Grinding Machine to produce general component.

Domestic Wiring

 DISCUSS, DEMOSTRATE and APPLY the techniques of domestic wiring such as surface and conduit (PVC and GI) techniques.

Matlab

 DEFINE, DISCUSS and USE of common mathematical analysis software (MATLAB) to calculate matrix, differential, integration, graph, and other mathematical formulas.

Basic Electronics

 DEFINE, DISCUSS and USE of basic electronic devices, electronic components, soldering techniques, testing techniques, measurement techniques and its application.

Course Syllabus

EQT101/3 ENGINEERING MATHEMATICS I

Course Synopsis

This course will introduce the fundamental principles and concepts in linear algebra and calculus. The topics that will be discussed in this course are complex numbers, matrices, vectors, and differentiation & integration and partial differential equations also topic of Partial Derivatives.

Course Outcomes

- Ability to relate relevant concepts and methods in algebra.
- 2. Ability to relate concepts and methods in calculus.
- Ability to evaluate solutions of engineering problems using relevant concepts and methods

References

- 1. Fundamental Mathematics McGraw Hill.
- James, G et.al. (2007): Modern Engineering Mathematics. Pearson Education, 4th edition.
- 3. Stroud, K.A. (2007): Engineering Mathematics. Industrial Press Inc, 6th edition.

- 4. Peter V. O'Niel (2006): Advanced Engineering Mathematics, 6th edition, CL Engineering.
- 5. Lawrence H.T. Chang and Radzuan Razali (2002): Asas Metematik Kejuruteraan, Prentice Hall.

EQT102/3 ENGINEERING MATHEMATICS II

Course Synopsis

This course will introduce to students to differential equations. Initially differential equations covered the methods to solve differential equations including first and second order differential equations and its applications. Next, the course will introduce to the separation of variables method to solve partial differential equations problem. Then, Laplace transform will be discussed as a method to solve differential equations. At the end of study, Fourier Series will be discussed to the students.

Cources Outcomes

- 1. Ability to solve differential equations which covered first and second order ordinary differential equations and partial differential equation.
- 2. Ability to apply the Laplace transforms method to solve and analyze certain

- differential equations problems theoretically and physically.
- fundamental understanding of Fourier series and able to express Fourier series and Fourier series expansions to any given function.
- Ability to relate the differential equations and analyze certain physical problems.

Prerequisite

EQT 101 ENGINEERING MATHEMATICS I

- Introduction To Ordinary Differential Equation (2010), Penerbit UniMAP.
- 2. W. E. Boyce (2009): Elementary Differential Equations and Boundary Value Problems: International Student Version. John Wiley & Sons Inc., 9th edition.
- B.R. Hunt, L.J. Lardy ,R.L. Lipsman, J.E. Osborn, J.Rosenberg (2008):Differential Equations with Maple Wiley, 3rd edition.

- D. G. Zill and M.R. Cullen (2008): Differential Equations with Boundary-Value Problems. Brooks Cole, 7th edition.

D.G. Zill (2008). A First Course in Differential Equations. Brooks Cole, 9th edition.

BQT133/3 BUSINESS MATHEMATICS

Course Synopsis

The purpose of the course is to provide the student with mathematical techniques to help them to make better decisions in the business problems. Topics include: Matrix Algebra, Financial Mathematics, Differential Calculus and Integral Calculus.

Cources Outcomes

- 1. Ability to identify and apply the knowledge of matrix algebra in business models.
- 2. Ability to apply the knowledge in mathematics to solve the financial problems
- Ability to relate concepts and methods in calculus and select suitable methods to solve the business problems.

BQT173/3 BUSINESS STATISTICS

Course Synopsis

This course covers topics on data and statistics, descriptive statistics (tabular, graphical presentation and numerical measures), introduction to random variable, discrete and continuous probability distributions, sampling and sampling distributions, estimation, hypothesis tests, regression and correlation, and introduction to multiple regression.

Cources Outcomes

- Ability to apply the basic concept of statistics for statistical analysis and summarizing data.
- Ability to differentiate between discrete and continuous random variables and solve probability distribution.
- Ability to identify and decide the suitable statistical inference and regression in decision making

- Abdull Halim Abdul, Norazrita Amin, Biliana Bidin, Nor Fashihah Mohd Noor (2010) Statistics. Mc Graw Hill.
- 2. G C Beri (2010) Business statistics, McGraw-Hill.

- Weiers, R.M. (2007). Introduction to Business Statistics. Duxbury Press. An International Thompson Publishing Company.

EQT203/3 ENGINEERING MATHEMATICS III

Course Synopsis

This course introduces the definition and concepts in vector calculus, the fundamental theorems of vector calculus and numerical methods. The topics discuss the concept of differentiation and integration in vector calculus, the line, surface and volume integrals as well as the Green's, divergence and Stokes's theorems. In numerical methods topic, several numerical techniques will be introduced to solve nonlinear equations, interpolation, curve fitting, differentiation, intergration and also differential equations. The introduction of finite element method also will be exposed in this course.

Cources Outcomes

- Ability to apply vector calculus concepts to solve single, double or triple integrals
- 2. Ability to apply the concept of differentiation and integration in vector calculus to solve classical theorems in vector calculus.
- 3. Ability to select appropriate numerical methods to solve the mathematical problems

References

EQT221/3 DISCRETE MATHEMATICS & LINEAR ALGEBRA

Course Synopsis

This course introduces the definition and concepts in discrete mathematics and linear algebra which is an essential tools in almost all subareas of computer science and communication systems. The

topics discuss includes sets and functions, logic, theory number and cryptography, matrices and linear transformation, vector spaces and inner product spaces.

Cources Outcomes

- Ability to identify and choose the suitable concepts of discrete mathematics in solving engineering problems.
- 2. Ability to apply the concept of linear algebra in solving engineering problems.
- Ability to relate and solve engineering problems using discrete mathematics and linear algebra.

EQT241/3 INTERMEDIATE MATHEMATICS

Course Synopsis

This course introduces the definition and concepts in vector calculus and numerical methods. Three important concepts related to scalar and vector fields. The topics discuss also includes numerical differentiation and numerical integration, numerical solution of differential equations and finite difference method.

Cources Outcomes

- Ability to define the vector integrals and evaluate the line, volume and surface integral using Green, Guass and Stoke theorem.
- Ability to find the numerical solution of the equation and use the suitable numerical methods to solve the problems.

 Ability to relate the relevant concept of vector calculus and numerical methods to solve engineering problems.

References

EQT271/3 ENGINEERING STATISTICS

Course Synopsis

This course introduces the fundamental concepts in statistics.

The definition of statistics and basic concepts of statistics such as collection of data, data summary and presentation, probability distribution and sampling distribution will be introduced to the students in topic basic statistics. This course also teaches the students on how to make a statistical inference which are estimation and hypothesis testing. Apart from that, students will learn on how to run statistical test and analyze the results obtained. These skills will be taught in topic introductory linear regression (Simple linear regression, Least squares method, Test for linearity of regression and Pearson product moment correlation coefficient), analysis of variance (one-way and two-way ANOVA) and nonparametric statistics (The χ^2 test, Sign test, Mann-Whitney test, Kruskal Wallis test, Wilcoxonsigned rank test and Spearman rank correlation).

Cources Outcomes

- Ability to understand, apply and explain the basic concepts of statistics.
- 2. Ability to solve problems using suitable statistical inference.
- Ability to construct the model and analyze the result from ANOVA table and simple linear regression.
- 4. Ability to apply the basic methodology of nonparametric statistics to solve engineering problems.

EQT272/3 PROBABILITY & STATISTICS

Course Synopsis

This course provides an elementary introduction to probability and statistics with applications. Topics include probability theorem, random variables, probability distribution, statistical inference which is including estimation and hypothesis testing and finally the regression concept.

Cources Outcomes

- Ability to apply the theory of probability and solve discrete and continuous random variables
- Ability to understand and apply the concepts of probability distribution.
- 3. Ability to apply hypothesis testing and simple linear regression model to solve engineering problems.

References

PQT111/3 MATHEMATICS FOR ENGINEERING TECHNOLOGY I

Course Synopsis

This course will introduce the fundamental principles and concepts in algebra, calculus and statistics. The topics that will be discussed in this course are complex numbers, matrices, vectors, differentiation & integration and statistics.

Cources Outcomes

- Ability to solve mathematical problems using basic concepts of algebra (complex numbers, matrices and vectors).
- Ability to solve mathematical problems using basic concepts of calculus (differentiation and integration).
- 3. Ability to solve statistical problems using data analysis.

- Fundamental Mathematics, McGraw Hill
- 2. James, G et.al. (2007): Modern Engineering Mathematics.
 Pearson Education, 4th edition.
- 3. Stroud, K.A. (2007): Engineering Mathematics. Industrial Press Inc, 6th edition.

- Montgomery, D.C. (2006): Applied Statistics and Probability for Engineers. Wiley, 4th edition.

PQT112/3 MATHEMATICS FOR ENGINEERING TECHNOLOGY II

Course Synopsis

This course will introduce the concepts of ordinary differential equations. The topics that will be discussed in this course are the methods in solving the differential equations including first and second order differential equations and its applications. Next, the course will introduce to the Laplace transform method to solve differential equations and at the end of topic, Fourier Series expansion of a function will be discussed to the students.

Cources Outcomes

Able to solve differential equations involving the first and second order differential equation by selecting

- appropriate techniques and able to relate and analyze the certain physical problems to differential equations.
- Ability to apply the Laplace transforms method to solve and analyze certain differential equations problems.
- Ability to apply the fundamental understanding of Fourier series and able to express Fourier series and Fourier series expansions to any given function.

Prerequisite

PQT 111 Mathematics for Engineering Technology I

References

PQT213/3 MATHEMATICS FOR ENGINEERING TECHNOLOGY III

Course Synopsis

This course will introduce the definition and concepts of partial derivatives and vector calculus. An introduction to some theorems in vector calculus topic will be exposed for students. At the end of study, this course also discusses the topic of numerical methods that introduce several methods in solving mathematical problems.

Cources Outcomes

- Ability to apply the concepts of partial derivatives and able to evaluate solutions of mathematical problems using suitable methods.
- 2. Ability to apply vector calculus concepts and able to differentiate and solve single, double or triple integrals
- 3. Ability to solve numerical problems by selecting suitable numerical methods.

PQT 274/3 STATISTICS FOR ENGINEERING TECHNOLOGY

Course Synopsis

This course introduces the fundamental concepts in statistics. The definition of statistics and basic concepts of statistics such as collection of data, data summary and presentation, probability distribution and sampling distribution will be introduced to the students in topic basic statistics. This course also teaches the students on how to make a

statistical inference which are estimation and hypothesis testing. Apart from that, students will learn on how to run statistical test and analyze the results obtained. These skills will be taught in topic introductory linear regression (Simple linear regression, Least squares method, Test for linearity of regression and Pearson product moment correlation coefficient), analysis of variance (one-way) and nonparametric statistics (The χ^2 test, Sign test, Mann-Whitney test and Spearman rank correlation).

Cources Outcomes

- Ability to understand, apply and explain the basic concepts of statistics.
- 2. Ability to solve problems using suitable statistical inference
- Students should be able to identify the coefficients and apply the methods to construct simple linear regression model.
- 4. Students should be able to construct the ANOVA table and analyze the result.
- 5. Students should be able to understand, select and apply the basic methodology of nonparametric statistics.

Centre for Industrial & Governmental Collaboration (CIGC)

Address

CENTRE FOR INDUSTRIAL & GOVERNMENTAL COLLABORATION (CIGC)

Universiti Malaysia Perlis

Aras 2, Bangunan Pentadbiran Pusat Kejuruteraan dan Inovasi, Kampus Tetap Unimap Pauh Putra, 02600 Arau, Perlis

> Office: +6(04) 988 5722 Fax: +6(04) 988 5723 e-mail: dir_cic@unimap.edu.my

The Centre for Industrial Collaboration (CIC) serves as the link between the university and industries in carrying out various R&D activities and academic programmes. The centre also represents the diversity of academic offerings and events based on participation and commitment from the industries. CIC consists of several main units, namely Graduate Employability, Industrial Training, Industrial Networking, ICT & Publicity, Administration (Finance & Projects) and Integration Industry (Kulim). Among the programmes conducted with the involvement from industries are Industrial Exposure (IndEx), Industrial Entrepreneur (IndEnt), Industrial Training (InTra), Forums, Seminars with Industries, Job Camps, Graduate Trainee Programs, Degree++ Programs, MoU/MoA with Industries and Industry Centre of Excellence (ICoE).

Course Offered

EIT 302/4 Industrial Training [Degree In Engineering Programme]

Syllabus

The course will expose students to the technical and application aspects as well as other organizational aspects such as company organization structure, company operation, department function, work procedure, safety procedure, management, communication, technical skills, project management and presentation. The students are also required to submit their logbook and report at the end of the Industrial Training. Overall, the course is a practical-based course.

Course Outcomes

- **CO1:** Ability to display good work performance and adapt to the working environment during training period.
- CO2: Ability to demonstrate good communication skills, leadership and work ethics during training period.
- **CO3:** Ability to perform assigned task given by host company.

BIT291/6 Incubator Programme

[Degree In Business (Engineering Entrepreneurship) Programme]

Syllabus

This course gives students direct exposure to the real entrepreneurship and business world. Students will be stationed in business incubators, generally assigned to one of the startup companies. Students will go through the experience of starting up a company / business including being exposed to the company procedures, banking activities, development of new product, business networking, management of the company and so on. Students will also get exposure communicating in actual business world and this will develop their skills in fostering an entrepreneurial network.

Course Outcomes

- CO1: Ability to display good work performance and adapt to the working environment during training period.
- CO2: Ability to demonstrate good communication skills, leadership and work ethics during training period.
- **CO3:** Ability to perform assigned task given by host company.

Co-Curriculum Centre

Address

CO-CURRICULUM CENTRE

Universiti Malaysia Perlis

Taman Utara Jejawi Jalan Jejawi Sematang 02600 Jejawi, Arau, Perlis

Tel: +6(04) 979 7908 / 7910 / 7911 / 7913 / 7914 Fax: +6(04) 979 7907

Introduction

The Department of Higher Education through a letter dated August 3rd, 2008 had instructed Co-curriculum Centres to be established at all Malaysian Public Institutions of Higher Education. The aim is to achieve the goal that had been outlined in the Country Higher Education Strategic Plan which is to strengthen the 'learning outcomes' through co-curriculum activities.

UniMAP Co-curriculum Unit was established in the year 2002 and was placed under the Centre for Communication Skills and Entrepreneurship. Then, on the 8th of June 2010 the Co-curriculum Centre had moved out from the Centre for Communication Skills and Entrepreneurship, and started operating at a new location at Taman Jejawi Utara. On the 29th of July 2010, the establishment of Co-curriculum Centre was officially launched by the Honourable Dato' Vice Chancellor of UniMAP.

The Co-curriculum Centre offers a lot of co-curriculum and uniformed bodies courses. All degree students are compulsory to take 1 @ 2 course or 3 unit. Co-curriculum Centre currently offers up to 44 co-curriculum courses for degree students regardless of their academic programmes.

Co-Curriculum Courses

UZW101 GOLF

Course Synopsis

The Golf Co-Curriculum course aims to expose the students to the science of the game of golf in both theoretical and technical skills. The theoretical aspect of the course covers the history, background, terminology, self-management and other related aspects of golf, while the technical portion focuses on the practical training i.e. skills in playing golf.
